

Draft District Strategy:

Inner North & City 2022

This district strategy document is a draft. The draft strategies include ideas, aspirations and potential opportunities for the districts of Canberra as the population and city changes in the future.

The Environment, Planning and Sustainable Development Directorate has undertaken technical work to prepare this initial draft document and is seeking community input and feedback to help shape the future of Canberra through this document.

In the draft document we have made suggestions about how we might plan the future of districts considering how and where we could accommodate different types of development, increasing population, supporting services, how to maximise the benefits of future transport possibilities and how to improve the economic and social roles of our centres. The strategies also consider the importance of the environment and suggested new ecological areas and connectivity and possible new connections for walking and cycling.

We encourage you to provide comments on these draft strategies, and ideas and initiatives presented in them and to suggest others as well; so that we can make sure we get a good balance between protecting areas that people value and accommodating future growth and change.

Minister's Foreword

Canberra is one of only a few cities planned from day one—and planned to be nestled in the landscape. As our city continues to grow, we are planning for its future. We are considering our planning legacy and heritage values, our place as the Nation's Capital.

Since the original Griffin Plan, our city was set out with a City Centre and districts. These districts provide opportunities to support a fair, sustainable and dynamic city. I am eager to see the valued character of each of our districts supported through the introduction of district strategies in the reformed planning system.

The community is playing a vital role in the development of these new district strategies. Consultation began in 2019 with district planning workshops. Each draft district strategy is shaped by the views of the people who live and work in, or frequently visit, that district. They are dynamic documents that will evolve with our city. I now look forward to hearing community feedback and discussion on these draft district strategies.

The district strategies will put the themes and directions from the ACT Planning Strategy into a more localised context. They will set the vision, priorities and values of each district and embed them in the planning system. They will capture the key planning matters raised by Canberrans and provide clear guidance to help deliver desired planning outcomes. They will enhance and protect the defining characteristics of each district—the things we value most, such as natural space, liveability, diversity of lifestyle choice and more.

The district strategies will work together with the new Planning Act, new Territory Plan, 2018 ACT Planning Strategy and development assessment processes to support an outcomes-focussed planning system that is accessible, easy to use and delivers a sustainable and compact city that gets the right balance between community, environment and economic needs.

The district strategies will be part of our new, contemporary and best practice planning system that keeps our valued urban form and connection to the natural landscape and helps make Canberra a unique and welcoming place to live.

Mick Gentleman, MLA

Minister for Planning and Land Management

November 2022

Acknowledgement of Country

*Yuma. Dhawura nguna ngurumbangu
gunanggu Ngunnawal.*

Hello. This country is Ngunnawal
(ancestral/spiritual) homeland.

*Nginggada dindi dhawura Ngunnawalbun
yindjumaralidjinyin.*

We all always respect elders, male and female, as
well as Ngunnawal country itself.

Mura bidji mulanggaridjindjula.

They always keep the pathways of their ancestors
alive.

Naraganawaliyiri yarabindjula.

They walk together as one.

The Environment, Planning and Sustainable Development Directorate acknowledges the Ngunnawal people as Canberra's first inhabitants and Traditional Custodians. We recognise the special relationship and connection that Ngunnawal people have with this Country. Prior to the dislocation of Ngunnawal people from their land, they were a thriving people whose life and culture was connected unequivocally to this land in a way that only they understand and know, and is core to their physical and spiritual being. The disconnection of the Ngunnawal people from Culture and Country has had long-lasting, profound and ongoing health and wellbeing effects on their life, cultural practices, families and continuation of their law/lore.

The Environment, Planning and Sustainable Development Directorate acknowledges the historic dispossession of the Ngunnawal people of Canberra and surrounding regions. We recognise the significant contribution the Ngunnawal people have played in caring for Country as for time immemorial they have maintained a tangible and intangible cultural, social, environmental, spiritual and economic connection to these lands and waters.

District Strategy Summary – Inner North and City

A future vision for the Inner North and City

The City Centre is Canberra's beating heart. It is the pre-eminent location for economic activity in the ACT, particularly for civic functions, business services, regional level shopping and hospitality. Its entertainment function is the key location for night-time uses. The City Centre has developed in concert with other major employment locations across other districts, each with their own distinct role. Space for commercial uses over the long term is preserved with appropriate buffers to or integration with residential development. World class institutional assets such as the Australian National University, the new University of NSW campus, and Australian Defence Force Academy are major anchors for value-adding innovation precincts that enhance the international reach of Canberra's economy.

The City Centre is the central hub and interchange for Canberra's public transport network, integrating light rail routes seamlessly with buses and active travel infrastructure to support sustainable movement around the city. New development in established areas has delivered living infrastructure, contributing towards tree canopy and other targets to bring nature into the city. Designing with Country in the renewal of the district has been fundamental.

Redevelopment in the district has pioneered the concept of more compact, walkable communities in Canberra, where quick connections to public transport, local centres and shopping hubs, and natural blue and green corridors for walking and cycling is part of daily living. New housing has focussed on the light rail corridors, with high-quality design outcomes, a mix of tenures including social and affordable housing, and enhanced public areas and open space. Landscape and built form character elements that define established residential areas in the district have been respected and protected, alongside new development.

Sullivans Creek remains – and thrives – as the major blue-green corridor for the district. Linkages between reserves, open space and Garden City precincts have been enhanced for people. Community and recreational facilities supporting rapid population growth have taken new forms including co-location and integration alongside complementary and mixed-use development.

District strategies have been prepared for nine districts in the ACT, based on five big drivers, 10 targets, and 12

implementation pathways. These inform the specific directions and initiatives to be delivered in each district.

5 big drivers	10 targets	Directions for Inner North and City
 <p>Blue-green network</p> <p>Vegetation, nature reserves, open space, water elements and cultural heritage elements are protected and provide the setting for a city ‘in the landscape’. The blue-green network also includes connections for walking and cycling throughout the urban area, sometimes aligned with natural corridors where conservation values can be protected.</p>	<ul style="list-style-type: none"> ● More nature and retaining water in the city. ● Expand liveable blue-green network connections. 	<ul style="list-style-type: none"> ● Protect, enhance and restore habitat values in key blue-green corridors including re-naturalisation of Sullivans Creek and its tributary waterways, connections to Banksia Street and Dickson Wetlands and linkages between reserves, urban open space and Garden City precincts. ● Make sure future redevelopment contributes towards living infrastructure aims in built up areas including the City Centre.
 <p>Economic access and opportunity across the city</p> <p>Selected major economic hubs and group and town centres across Canberra are a focus to strengthen the city’s role in the national economy, but also to provide greater economic diversity and expanded access to employment opportunities for residents.</p>	<ul style="list-style-type: none"> ● Improve economic opportunities in districts with a shortage of jobs. ● More jobs accessible to home. 	<ul style="list-style-type: none"> ● Protect floorspace and development opportunities for future economic activities and employment to make sure the City Centre maintains its pre-eminent economic role. ● Develop innovation precincts around economic assets in the City Centre (ANU/CSIRO and UNSW), Watson (ACU and AIE) and Campbell (ADFA).
 <p>Strategic movement to support city growth</p> <p>The developing public transport network provides access to employment centres and is a focus for future high quality infill development. The road network increasingly provides for multiple travel modes, as well as dedicated movement corridors for private/public and commercial vehicular traffic. Land use planning will be informed by transport planning and traffic modelling to address existing and potential traffic and parking issues.</p>	<ul style="list-style-type: none"> ● Reduce car dependence. ● More active transport. 	<ul style="list-style-type: none"> ● Develop the City Centre as a multimodal transport hub including accommodating future light rail corridors, bus interchange functions and improved active travel infrastructure. ● Plan in long term for future faster or high-speed rail connection to the City Centre via the East Canberra district and potential support infrastructure.
 <p>Sustainable neighbourhoods</p> <p>New residential development is of a height and density appropriate to neighbourhood characteristics and amenities, provides a mix of housing types and is a means for sustainable transformation, including enhanced walkability and better connections to centres, zero carbon initiatives, and social and affordable housing.</p>	<ul style="list-style-type: none"> ● Expand walkable access to shops and services. ● More inclusive and fair communities. 	<ul style="list-style-type: none"> ● Revise City Plan to guide high quality future development of the City Centre and reflect the future entertainment plan as relevant to the City Centre. ● Develop economic and mixed-use hubs at and nearby light rail stops along the Northbourne Avenue corridor based on sustainable urban development principles.
 <p>Inclusive centres and communities</p> <p>Group and local centres provide walkable access to daily necessities for surrounding communities. Possible centres are identified for investigation of appropriate planning and non-planning initiatives to support their ongoing viability and role as a community meeting place. This could include communities where social stresses may be in evidence, however the actual centres are to be confirmed through further analysis. In addition, new community facilities support growth and underpin wellbeing across Canberra.</p>	<ul style="list-style-type: none"> ● Greater activation of group and local centres. ● Improved community wellbeing. 	<ul style="list-style-type: none"> ● Pursue innovative models for future community and recreational facilities to support expected population growth, given constrained land supply.

Delivering the district strategies – 12 implementation pathways

1 Blue-green network preservation and expansion

Restore, protect and fill gaps in the network of nature reserves across the ACT and delivering initiatives set out in environmental policies and legislation. Provide and extend connections for walking and cycling throughout the urban area aligned with the network of natural corridors, where conservation values can be protected, to contribute to a living blue-green network.

2 Detailed planning for future housing and employment

Undertake further analysis, research and investigations to inform more detailed planning for future employment floorspace and housing.

3 Territory Plan – applying urban character and design principles

Make changes through the statutory planning system and Territory Plan, such as rezoning or implementation by district policies or zone policies.

4 Transport and land use integration

Integrate land uses in planning for infrastructure projects like light rail and transport network development.

5 Employment and economic focus areas

Select centres to be a focus for enhanced economic development and employment outcomes through targeted planning and policy initiatives.

6 Establish new innovation precincts

Enhance the economic contribution of geographic areas where high value industry, research, health and education institutions and elite institutions are clustered together by enhancing physical and networking connections through targeted planning, asset development and management, and coordination initiatives.

7 Group and local centres initiatives

Provide targeted interventions to address declining group and local centres in established urban areas including some centres where socio-economic indicators are below the Canberra average.

8 City making and ‘urban improvement’

Develop key precincts to contribute to remaking the city through ‘urban improvement’ – this means improving streets and public domain with more connections and greenery to encourage walking and enhance local liveability.

9 Facilitate the zero carbon transition

Provide the infrastructure needed to deliver the transition, as well as supporting and encouraging building owners and development proponents to transition.

10 Integrated infrastructure planning

Integrate planning and delivery of infrastructure to support growth, including civil infrastructure, environmental upgrades and management, and community and recreational facilities.

11 Governance for comprehensive redevelopment

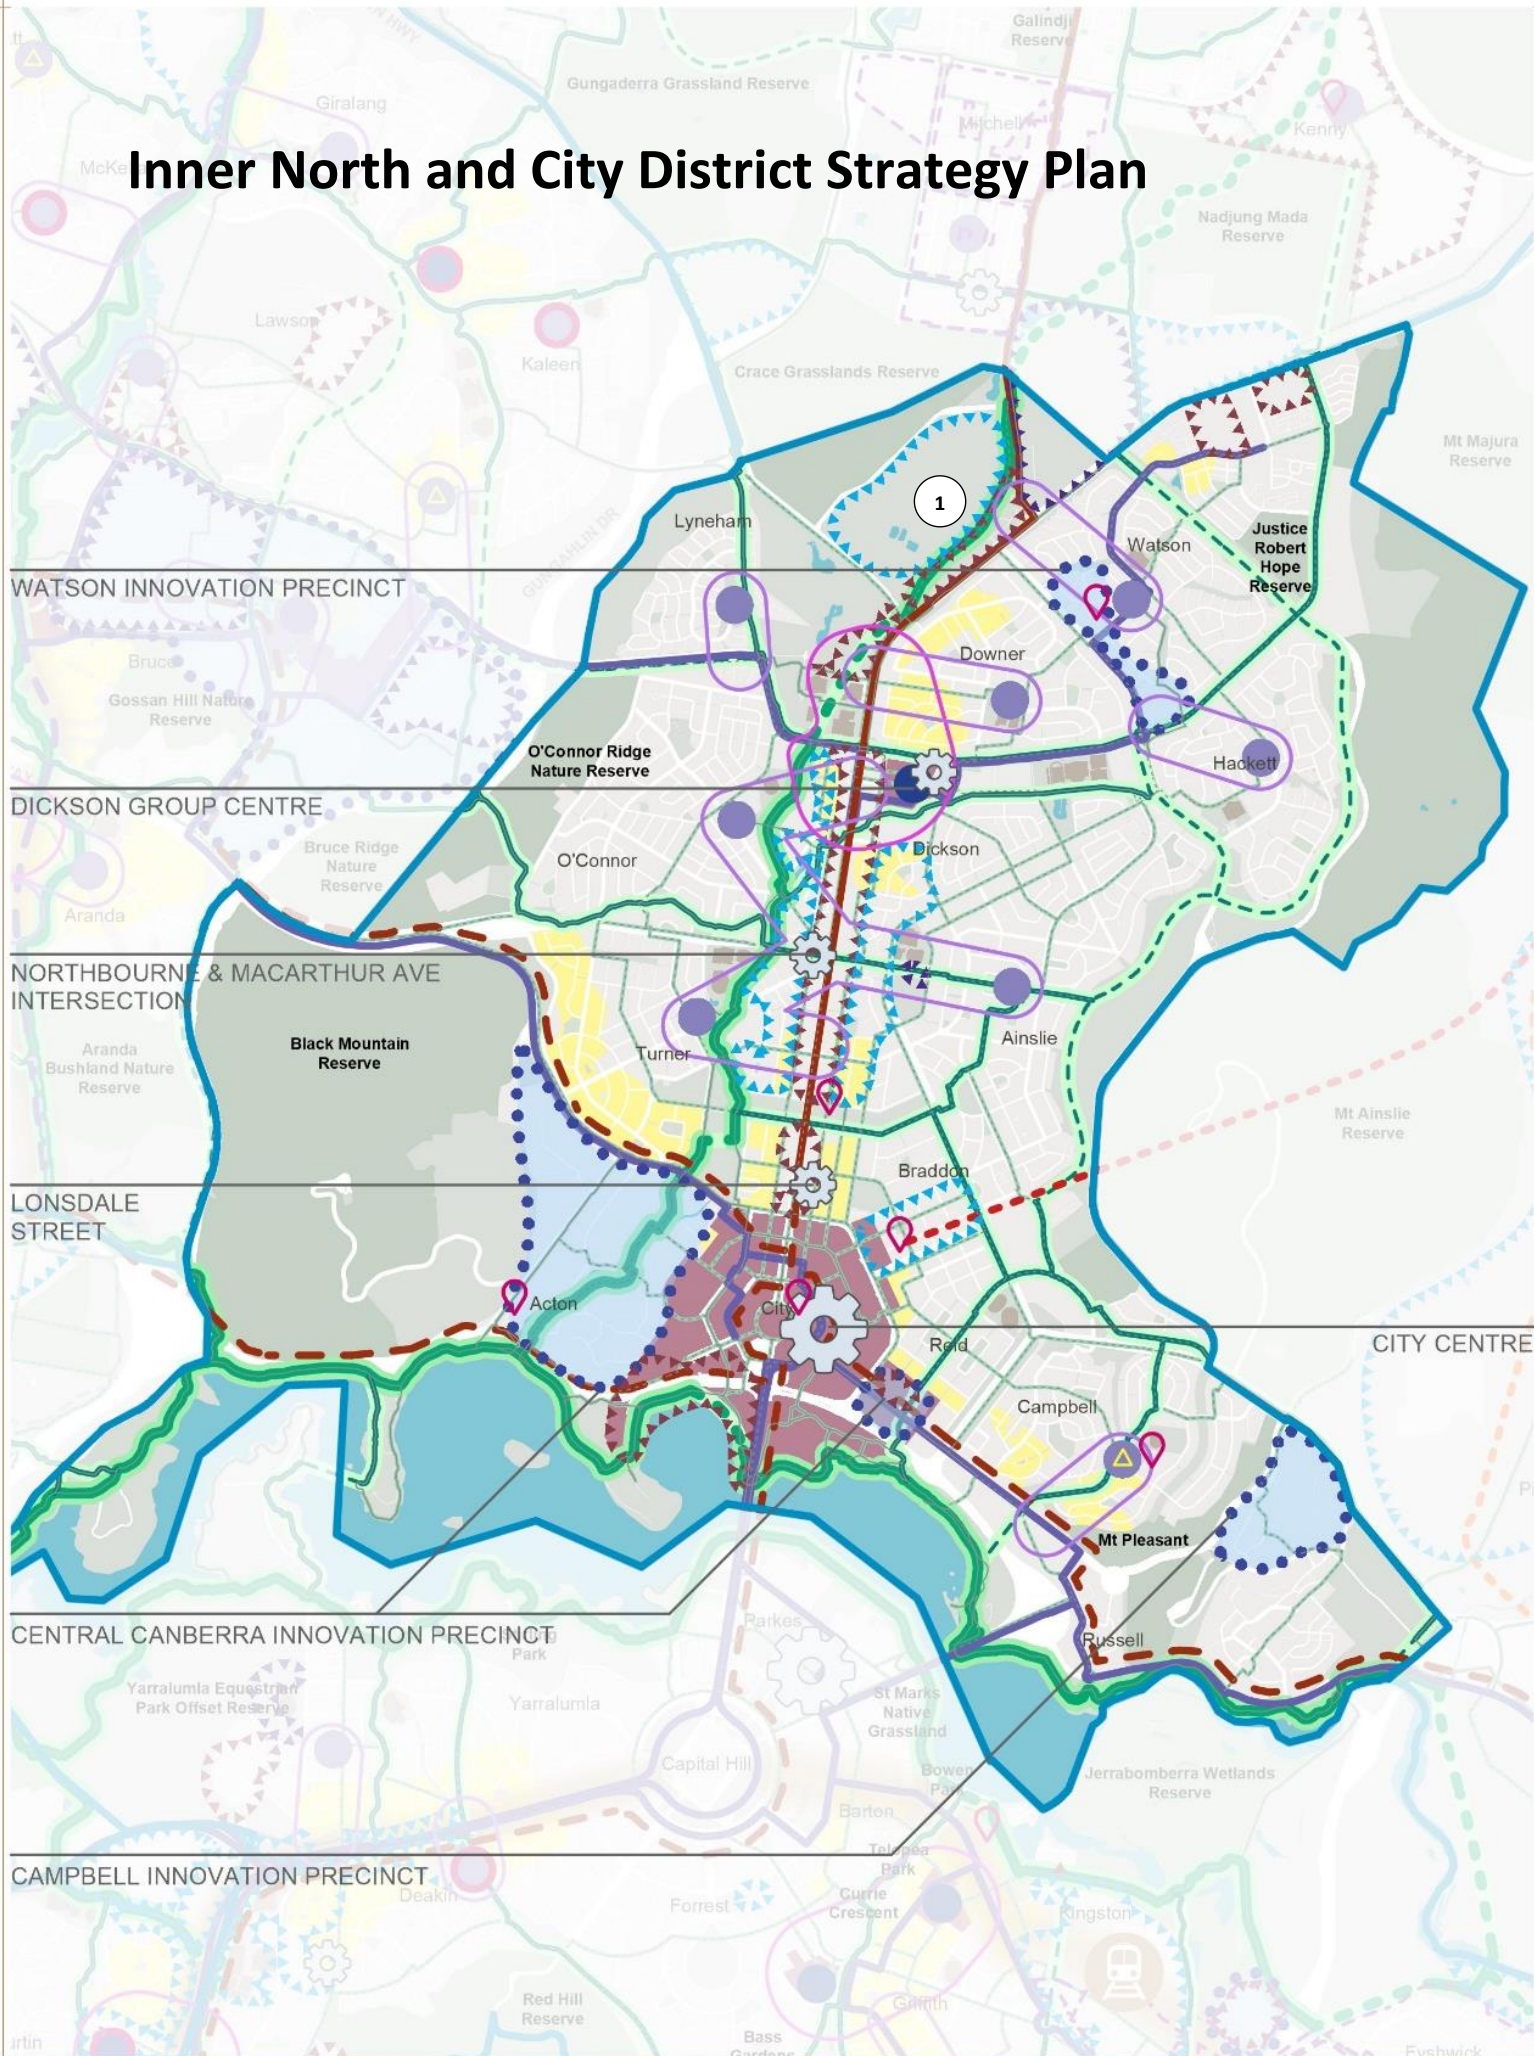

Investigate a new ‘urbanising agent’ or governance models to facilitate significant redevelopment and urban improvement.

12 Social and affordable housing contributions

Investigate future initiatives to support increased social and affordable housing in Canberra.

Note: Not all implementation pathways will apply in each district, and the numbering does not reflect an order of priority.

Future Investigation Areas

Areas that may be suited to future redevelopment for housing subject to further detailed investigations of factors such as heritage and environmental values, natural hazards, the practicalities of redevelopment, and available infrastructure.

1. Introduction

Photo credit: ACT Government.

The role of district strategies and the wider planning system

District strategies have been prepared in the wider context of the review and reform of the ACT's planning system.

Review and reform process

Our city is growing. With more people living and working in Canberra, we need a planning system that can facilitate and guide this growth without compromising the characteristics of the city that we value.

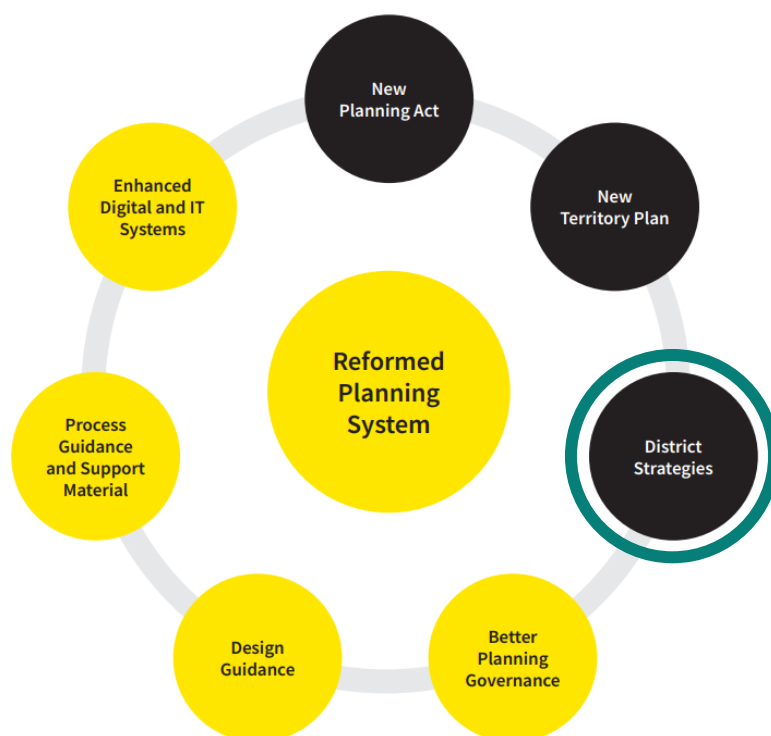

A modern planning system is fundamental to our vision of a liveable and sustainable city. We want a planning system that is focussed on delivering positive outcomes for the residents of Canberra, encourages innovation and new ideas and is efficient and easier to use.

In the 15 years since the last major review of the Territory Plan, the long-term aspirations for Canberra have evolved to reflect the importance of adapting to climate change, delivering key infrastructure for our growing population and providing greater housing choice and accessibility. Together with the 2018 ACT Planning Strategy, this has shaped how we plan for Canberra's future.

Through the ACT Planning System Review and Reform Project we are reviewing and reforming our planning system in a holistic way to deliver better outcomes for communities, development, the environment and people across Canberra. **The district strategies are one part of this process, alongside a new Planning Act and a new Territory Plan with an outcomes-focussed approach.**

Established policy framework

District level planning bridges the gap between ACT-wide and local area planning. It sits within the existing ACT planning policy framework. The district strategies present an opportunity to illustrate how to deliver, across the districts, the vision of the 2018 ACT Planning Strategy and the directions set down within key ACT policy documents. Other relevant policies and strategies have also been considered.

ACT Planning Strategy 2018

The ACT Planning Strategy 2018 provides a vision for a more compact and efficient city and a strategic direction that future urban growth will be supported by delivering up to 70% of new homes within Canberra's existing urban footprint. To achieve this, new development will be concentrated in areas close to the City Centre, town and group centres and along key transit corridors. This urban form is highlighted in the ACT Planning Strategy Policy Plan.

CBR Switched On – ACT's Economic Development Priorities 2022–2025

The 2022 priorities for economic development post-COVID include for Canberra to be a city that gives you back time, delivers a net zero city and focusses on knowledge-based economic growth. The Chief Minister's Statement of Ambition includes building on Canberra's strength as the knowledge capital and continuing Canberra's track record in innovation and entrepreneurship. The three missions underpinning the strategy include a focus on developing innovation precincts to attract talent, and facilitating investment in key industries including space, cyber, security, defence, renewables, and advanced technologies.

ACT Climate Change Strategy 2019–25

In May 2019, the ACT joined many other cities, states and territories around the world in declaring a state of climate emergency. The ACT Climate Change Strategy 2019–25 sets out the Government's response. It outlines actions to meet the ACT's legislated emissions reduction target of 50–60% (below 1990 levels) by 2025 and establishes a pathway for achieving net zero emissions by 2045.

ACT Wellbeing Framework

The ACT Wellbeing Framework describes that qualities such as “having the opportunity and ability to lead lives of personal and community value – with qualities such as good health, time to enjoy the things in life that matter, in an environment that promotes personal growth – are at the heart of wellbeing.”

ACT Transport Strategy 2020

The ACT Transport Strategy 2020 sets out the Government's approach to achieving flexible, reliable and sustainable options for Canberrans to make their journeys, and provides a framework for planning and investment in transport for the next 20 years. It describes how the ACT Government will deliver connected public transport; high quality environments for walking and cycling; and a road network that allows us to move people and goods safely and reliably across the city.

ACT Infrastructure Plan

The ACT Infrastructure Plan provides a framework for how the ACT Government will build new and renew established infrastructure to cater for a city of 500,000 people. The plan is a comprehensive, multi-decade plan detailing over \$14 billion worth of infrastructure investments. The focus of the plan is on health, education, transport and community services. The plan is currently being updated.

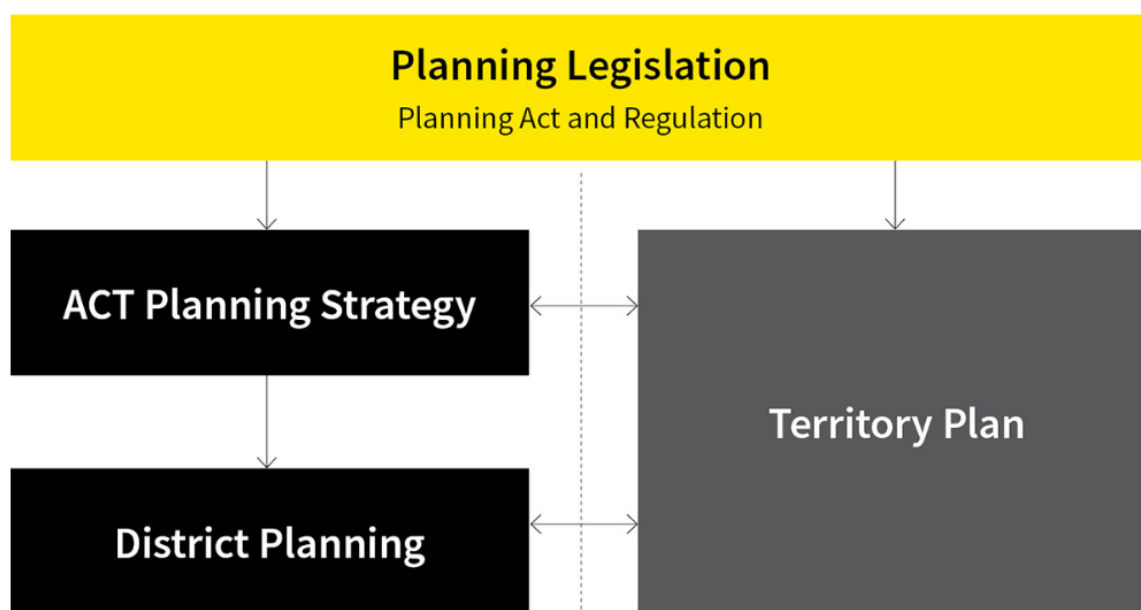

Role of the district strategies

The district strategies will facilitate the implementation of the new Planning Act by setting directions and future planning outcomes for each district. District planning allows for managing growth and change strategically within and between districts. District planning also provides the opportunity to recognise the distinctive character of each district and reflect this in the planning system.

The district strategies are intended to address an existing gap by providing a line-of-sight between metropolitan level planning, policies and legislation and on-the-ground outcomes that are influenced through the Territory Plan by:

- setting a future direction for each of Canberra's districts
- providing a guide for implementing the ACT Planning Strategy at a district level, including guidance on desirable areas of growth and change based on their accessibility to services, transport and amenities – consistent with good planning practice – to inform the district policies under the new Territory Plan
- informing the provision of infrastructure, community needs assessments, and assessment of major development and rezoning proposals and more detailed precinct and site planning
- assisting in achieving coordination between infrastructure, transport, planning, climate change and living infrastructure strategies and delivery of initiatives at a district level.

Figure 1: District planning within the reformed planning system

Source: ACT Government, 2022.

District policies

Under the new planning system, the existing structure plans, concept plans and precinct codes that sit within the Territory Plan will be refined and combined into new **district policies**. The district policies will set out specific planning requirements applying to a district or areas within a district where tailored policies are required to deliver the desired development outcomes.

The district strategies will inform the preparation of the district policies in identifying areas of potential future land use change and providing guidance on the expected character of development in those areas.

What do the district strategies cover?

District strategies for nine districts

District strategies have been prepared for nine districts, as shown in Figure 2:

- Belconnen
- Gungahlin
- Inner North and City
- Inner South
- Molonglo Valley
- Tuggeranong
- Weston Creek
- Woden
- East Canberra

East Canberra

East Canberra District includes the parts of Canberra known as Majura and Jerrabomberra, including the Oaks Estate. The district strategy for East Canberra is different to the other urban districts as its land uses are predominantly for employment and future planning will need to be informed by the outcomes of the Strategic Assessment for the Eastern Broadacre area.

Most new development and population growth will be in these nine districts. Strategic planning must take into account the special features, characteristics, challenges and opportunities of each district.

Other districts may be considered in the future, as necessary. For example, the western edge of the ACT is under investigation for its capacity to accommodate future development, which could result in a future district depending on the investigation's outcomes.

Data sources and methodology

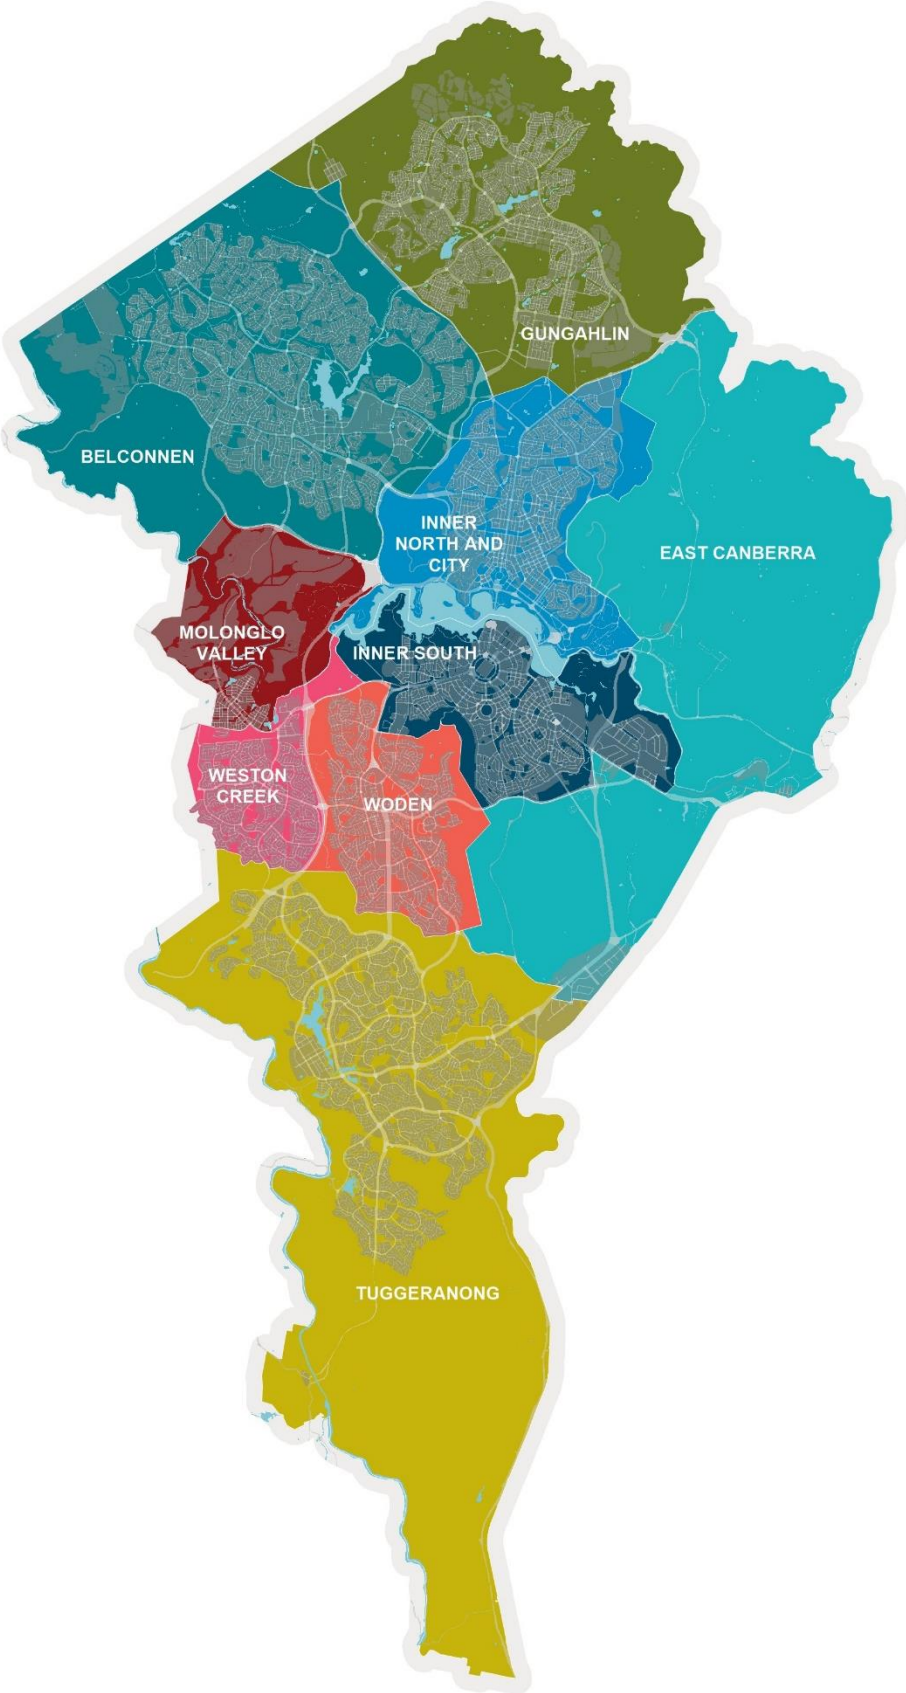

The preparation of the district strategies has drawn on a wide variety of sources including:

- outcomes from stakeholder engagement activities by district
- ACT Government strategies and plans
- ABS Census data and government population projections (based on 2016 census data)
- previous studies and analyses on housing, employment, infrastructure, transport, environment and community facilities
- data and mapping for biodiversity, heritage, transport modelling, flood modelling and bushfire risk modelling (noting that improved mapping and understanding of risks is needed in the future)
- engagement with ACT Government directorates (see Appendix 4).

The planning for each district has considered different development scenarios, evaluated in terms of key elements such as transport accessibility, access to amenity and services and sustainability considerations, and refined to the preferred approach, which is documented in the district strategies.

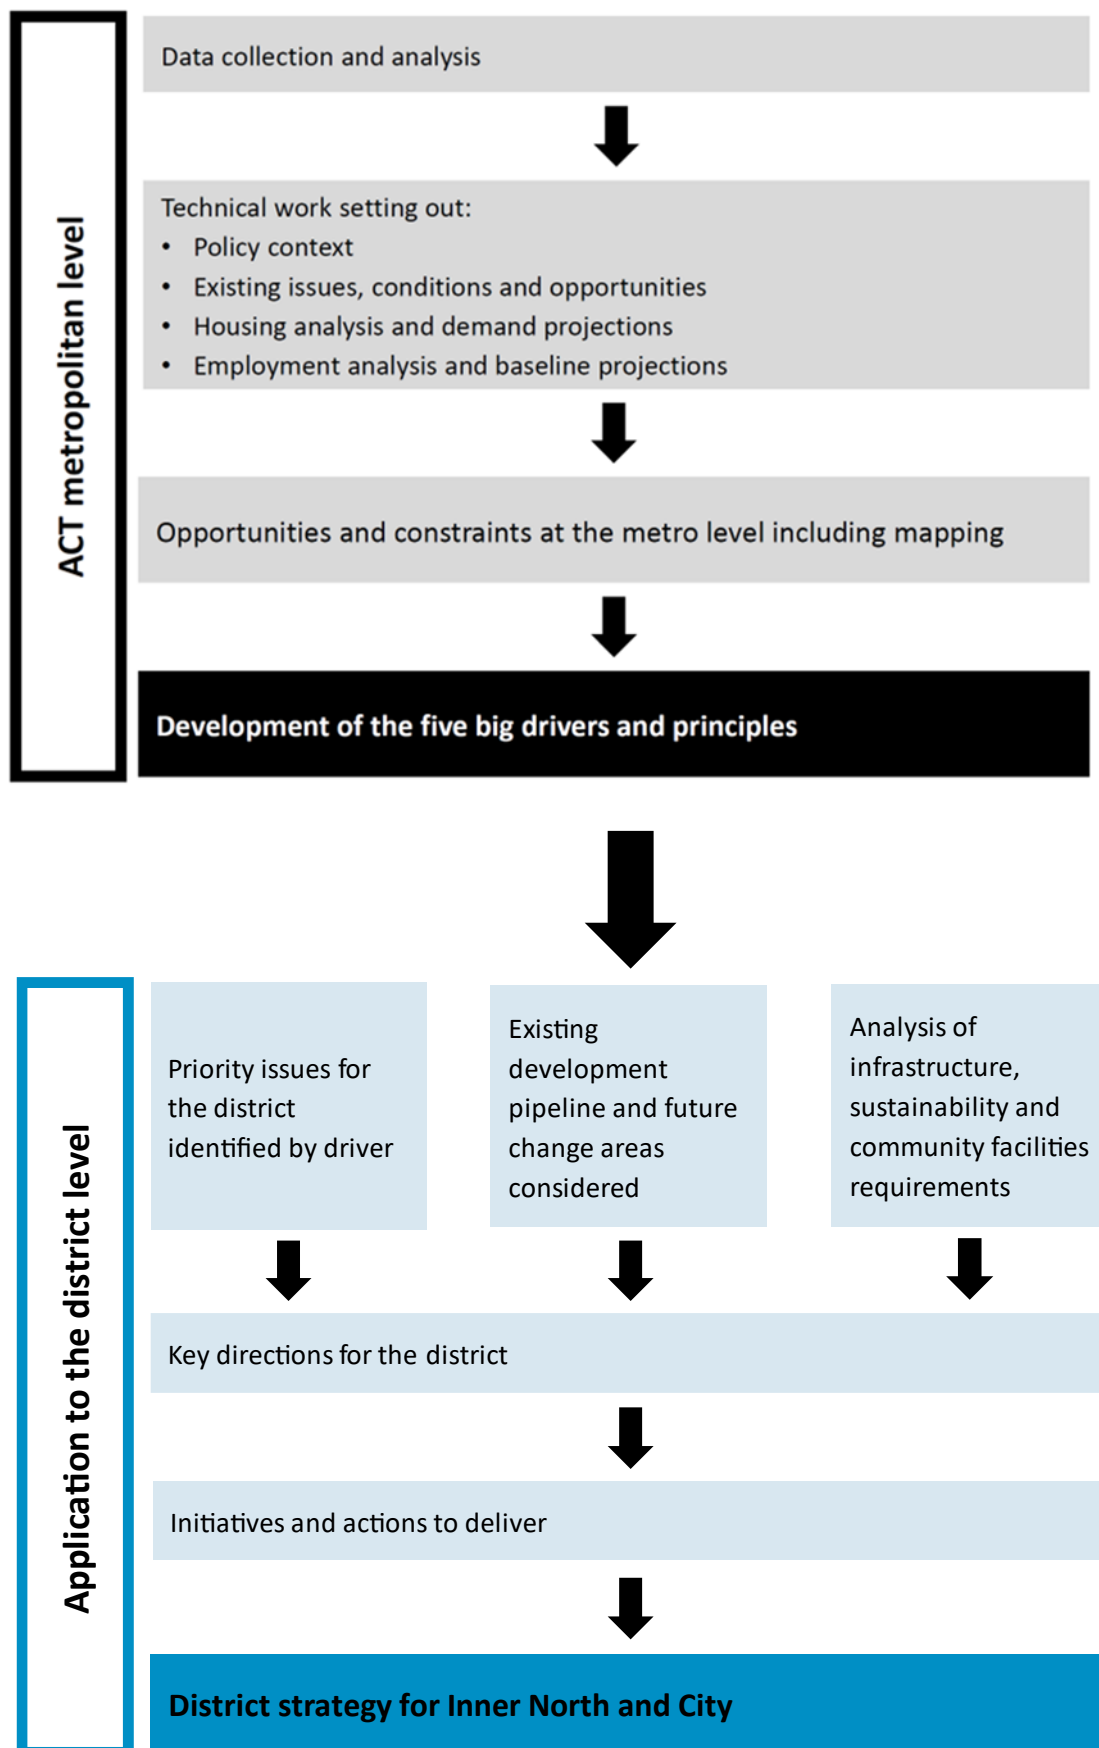

An overview of this methodology is provided in Figure 3.

Figure 2: District boundaries

Source: ACT Government and Tait Network, 2022.

Figure 3: District strategies methodology

District strategies will be dynamic documents

This is the first version of the district strategies, which have been developed to reflect the available information and data. The strategies will be 'living documents' that can be regularly updated to reflect new ideas, projects, strategies or policies adopted by the Government, and updated Census data, population and employment projections. The legislation requires us to consider at least every five years whether a review of the district strategies is necessary.

Note: The data in this document refers to both 2016 and 2021 ABS Censuses as not all the 2021 Census data was available when the district strategies were prepared. Similarly, the population forecasts used to inform the housing and employment targets are those prepared by ACT Treasury in early 2022, which were prior to the release of the 2021 Census results.

The intention is to update the strategies when additional 2021 Census data is available and the ACT's population projections have been revised, so they reflect emergent trends and provide more detailed analysis of areas of potential future change and development.

Time horizons for the district strategies

The 2018 ACT Planning Strategy identified a need for an additional 100,000 dwellings in the ACT over a 25-year period. **This estimate was based on historically high rates of growth observed in the ACT in the years preceding 2018.**

The most recent ACT Treasury population projections (prepared in early 2022 and based on 2016 Census data) and observed trends from previous ABS Census data suggest these rates of growth may not be sustained over the long term, with continued uncertainty around the impact of COVID-19 on migration levels and population growth. Modelling based on these population projections suggests that 100,000 additional dwellings in the ACT will be required through to around 2063.

As such, the district strategies address two time horizons:

- **2046** – a roughly 25-year horizon, when around 57,800 dwellings may be needed across the ACT
- **2063** – a longer term horizon when the 100,000 additional dwellings may be needed for the ACT

Planning for the longer-term 2063 horizon, in addition to the medium term in 2046, allows us to build in additional capacity for future growth in the right locations to respond to unexpected changes in demand and population growth. Longer term planning also allows for opportunities for alignment with delivery of crucial supporting infrastructure including major transport initiatives.

How to use this document

The rest of this document is set up in four sections. A glossary of terms is provided at the end of the document.

2

ACT metropolitan context

Section 2 sets the scene for the preparation of the district strategies in the wider metropolitan context. This includes: consideration of macro-level trends and issues that are affecting planning in Canberra and how we need to plan in future; the key themes that have emerged from consultation with the community; exploration of the existing demographics, housing stock and affordability, and employment characteristics of the ACT and each district; and identification of the potential future number of people and jobs that need to be accommodated in the districts.

3

Five big drivers of district planning

Section 3 describes the five big drivers at the metropolitan level that have guided the district planning:

- Blue-green network
- Economic access and opportunity across the city
- Strategic movement to support city growth
- Sustainable neighbourhoods
- Inclusive centres and communities

Under each driver, the existing spatial context, opportunities and challenges, and a series of planning objectives are outlined, along with 10 key targets that will enable monitoring of delivery.

4

Delivering the district strategies

Section 4 outlines 12 implementation pathways that will be used to deliver the district strategies.

These pathways provide a program of action over the short, medium and long term, and are linked to the district-specific initiatives in Section 5. Not all of these pathways will apply in each district.

5

District strategy for Inner North and City

Section 5 outlines the district strategy for the Inner North and City. The district strategy sets out the Inner North and City's context and opportunities and constraints. It contains a district strategy plan and key directions for the district based around the five big drivers. The district strategy also describes a series of district-specific initiatives for each driver, principles guiding future development of selected key sites within the district, and the infrastructure that may be required to support the delivery of the district strategy.

2. ACT metropolitan context

The ACT Planning Strategy provides Territory-wide directions and considers the regional context that Canberra and the ACT sit within. While the district strategies consider that broader regional context, these district strategies focus on the ACT and, specifically, its nine districts.

Photo credit: ACT Government.

Ngunnawal Country

The ACT is Ngunnawal Country and has been for tens of thousands of years. The foundational elements of this landscape are its geology, landform, flora and fauna, and the living culture of the Ngunnawal people.

These foundational elements of place are all the more important in the face of climate change and extreme weather. They must be understood aesthetically and practically in the context of the development of Canberra and nature in the city; and as part of Canberra's evolving urban structure.

Planning on Ngunnawal Country

Planning for future development should begin with understanding of Country and its importance and connection for Ngunnawal people. Country is much more than just a place; it is the interconnections between Ngunnawal people, the landscape and all its values past, present and future. It is the lore, law, language and songlines of Country that guide Ngunnawal people in caring for Country.

The district strategies commit to supporting the health and wellbeing of Country, about which we have so much more to learn. If we commit to valuing, respecting and being guided by the Ngunnawal people – who know that if we care for Country it will care for us – then the learning journey gives us the best chance of success in caring for and connecting to Country as Canberra continues to develop. Respectful collaborations and conversations are needed with the Ngunnawal people where appropriate about Canberra's continued development. This includes recognition of Ngunnawal peoples' rights under the ACT Human Rights Act 2004 and delivery on the Closing the Gap, ACT Aboriginal and Torres Strait Islander Agreement and Reconciliation Action Plan targets.

The landform and terrain, waterways, vegetation and natural reserves of the ACT – and the native flora and fauna and humans it supports – are the living embodiment of Country. These landscape elements are also fundamental to Canberra's evolving urban structure. They frame and dictate the footprint of urban design and development. The principle of caring for Country and Country will care for you plays a significant role in the future design of the ACT.

Connecting to Country

Restoring Ngunnawal cultural places in the Ginninderra Creek catchment: Mulanggang Traditional Aboriginal Landcare Group and Ginninderra Catchment Group

Macro trends and issues affecting planning

A range of broader, macro-level factors will influence how Canberra evolves.

The district strategies consider some of these factors and their potential implications and opportunities from a spatial and policy perspective. Many things have changed since the 2018 ACT Planning Strategy was developed, including trends and influences that may not have been evident at that time; many of the issues described below also need to be considered in more detail in metropolitan-level and other planning.

Climate change

Climate change is a fundamental threat to our planet and existing way of life; it must be a primary consideration in all planning for cities. The district strategies should make sure:

- development in Canberra considers sustainability and carbon impacts, consistent with the ACT Government's target for net zero greenhouse gas emissions by 2045
- the city is resilient to the impacts of climate change, and that these are considered in the locations for and types of development
- public and open space is central to urban design and built form planning due to its multiple beneficial roles.

Transport innovations and active travel

A range of transport innovations are emerging to provide flexible, reliable and sustainable options for Canberrans to travel. These innovations include the growing use of zero emissions vehicles – both private cars and in public transport networks – micro-mobility (e-scooters and e-bikes) and potentially in future, autonomous cars.

Growth in zero emissions vehicle use requires supporting infrastructure within our districts, noting particularly the ACT's phasing out of internal combustion engine vehicles from 2035.

Charging stations and other infrastructure may be able to be used to support local centres or integrate with community facilities. New housing can support reduced car use by encouraging walking and cycling friendly development and shared zero emissions vehicle access.

City-shaping transport

Transport infrastructure has a crucial ability to shape and dictate the urban form of a city, particularly large projects such as light rail, high speed rail or major roads.

The locations of major transport infrastructure should consider elements such as accessibility to residents, accessibility to employment, efficient connections to the wider network and integration into the existing urban fabric. The ACT's future rapid transit network presents opportunities for development to align with improved amenity and accessibility within each of the districts.

Future industries and employment

Our economy and ways of working are constantly evolving. The COVID-19 pandemic has had a particularly significant impact in some sectors; for example, more people working from home is changing how commercial floorspace is used. There may be a need for increased flexibility in how commercial floorspace is used and where it is located.

Planning needs to consider the types of employment the ACT will have in the future. The city's competitive advantage in knowledge-based sectors will continue. As the city matures, more opportunities for industrial and 'land-hungry' employment uses may be required. Areas with more limited access to jobs and opportunities need to be considered to address spatial inequality.

Knowledge and innovation precincts

Innovation precincts are urban areas that have networks of organisations, start-ups, research institutes, knowledge intensive business and education institutions. The presence of many tertiary education and other anchor institutions in the ACT presents logical opportunities for the development of innovation precincts.

Establishing these types of precincts will require consideration of the land uses surrounding universities and major hospital precincts within some districts, alongside other success factors including internal connections and balancing land diversity, liveability, amenity and affordability.

Retail

Retail trends constantly evolve with consumer desires and expectations; this can influence the structure and character of centres. The COVID-19 pandemic has accelerated trends towards online shopping, shifting the offering of centres away from traditional retail formats and towards experience-based services and food.

There may be opportunities within districts to revitalise declining local centres by opening them to a greater range of uses that are compatible with residential development.

Role as the national capital

Canberra has an important role as the national capital. This brings many advantages to the ACT: the tourism sector benefits from the presence of significant cultural institutions, attractions and national landmarks; and the city is the home of the Australian Government. Many institutions, embassies, landmarks and events that relate to Canberra's status as the national capital are concentrated in central Canberra; that is, the Inner North and City and Inner South districts respectively.

The National Capital Plan (NCP) and designated areas, administered by the National Capital Authority (NCA), have an important role to play in planning and shaping the development of the areas in which many of these institutions and landmarks sit, as well as other parts of the ACT.

The district strategies reinforce the location of the elements that contribute to Canberra's role as the national capital. They maintain the Griffin design for the City Centre and surrounds, landscape, vistas and views, and promote ease of access to and provision of services and facilities for the functions of government and associated office areas.

There may be opportunities to build on the tourism features in other districts to distribute tourism-related benefits, such as Gold Creek, the National Arboretum and Mount Stromlo.

Post-COVID environment

The COVID-19 pandemic has substantially impacted our way of life, although the long-term impact on our cities remains uncertain. Impacts have included altering our 'ways of working', our travel patterns and the functions of our centres, with more of a focus on 'the local' with more people working from home regularly.

The district strategies can reconsider the traditional roles of the City Centre and other centres in the ACT's hierarchy, with a shift to providing a greater diversity of uses for local business and enhancing the 'experiential role' of centres.

There may be a greater need for flexibility in land uses in Canberra's commercial centres to respond to shifts in demand, particularly if remote working patterns continue.

There is a need to continue to monitor trends which may arise out of the pandemic that will need to be planned for in future.

Housing affordability

Housing affordability remains a critical issue, with property prices and rents consistently among the most expensive in Australia. While household incomes in Canberra are, on average, higher than other cities, this often masks the lack of affordable housing for those on lower incomes.

Housing affordability is a complex issue that cannot be solved by planning alone. The district strategies can consider ways to support housing affordability, such as requiring contributions to social and affordable housing within developments, facilitating housing choice and diversity, and locating future housing close to amenities and services to minimise other costs of living for residents.

What we have heard from the community

In 2021, the ACT Government held a series of face-to-face workshops in each of the districts so the community could share ideas about what is important in creating liveable, diverse, accessible, compact, efficient, sustainable and resilient districts.

These workshops identified four key themes for the planning for all ACT districts: **environment, infrastructure and transport, building and housing, and community amenity**. A summary of the feedback is provided for all districts in Table 1, with the findings specific to the Inner North and City District provided in Section 5.

These themes have all been considered in the preparation of each of the district strategies.

Photo credit: ACT Government.

Table 1: Feedback from the community for all districts, 2021

Environment 	Infrastructure and transport 	Building and housing 	Community amenity 
Trees and planting <p>Increase street tree and undergrowth planting to support wildlife and improve urban cooling.</p> <p>Develop urban/micro forests.</p>	Foot and cycle paths <p>Connect foot and cycle path networks, supporting interchange between transport modes.</p> <p>Upgrade paths and accessible paths.</p>	Urban density <p>Locate urban density near commercial centres complemented with greenspaces.</p> <p>Consider concerns about high volumes, tall buildings, and development quality.</p> <p>Prevent negative impacts of densification on infrastructure and services.</p>	Education facilities <p>Better connect planning and education to make sure capacity in response to increased residential densities.</p> <p>Connect to public transport, roads and active travel options.</p>
Open green space <p>Protect and activate reserves and green corridors, particularly in areas of housing density.</p> <p>Maintain views of hills and ridges.</p>	Public transport <p>Increase connection, frequency, sustainability and utilisation of the public transport network.</p>	Housing diversity <p>Provide diverse housing including public housing, affordable housing, ageing in place and family homes.</p>	Employment and retail precincts <p>Revitalise and enhance shopping precincts and amenities.</p> <p>Increase employment opportunities in urban centres.</p>
Water sensitive urban design <p>Monitor and manage water quality.</p> <p>Increase amenity at waterfront locations.</p>	Roads <p>Reduce congestion and increase traffic calming.</p> <p>Increase safety of people from roads.</p>	Environmentally friendly <p>Design and construct new buildings to high environmental standards.</p> <p>Provide solar access in higher density living.</p> <p>Integrate buildings with natural spaces.</p>	Playgrounds and recreation spaces <p>Renew and activate existing playgrounds, sporting areas and facilities.</p>
	Parking <p>Retain parking.</p> <p>Recommend additional parking locations such as park and ride.</p> <p>Plan for new developments to make sure suitable parking within the development.</p>	Significant places <p>Plan sites to preserve and enhance their significance.</p>	Inclusivity <p>Integrate and educate about diverse groups including disability, Culturally and Linguistically Diverse (CALD), Aboriginal, religious and various age groups.</p> <p>Encourage inclusive community facilities.</p>
			Community spaces <p>Renew and activate existing spaces.</p> <p>Create new public spaces including cultural and religious facilities, meeting, volunteer and event spaces.</p> <p>Support needs of all age groups.</p>

Note: The feedback in Table 1 is taken directly from consultation and as expressed by participants.

Existing characteristics of the ACT and districts

The district strategies require an understanding of the existing context of the ACT in terms of its demographics, housing stock and affordability, and employment specialisations.

The district-by-district snapshot in the following pages provides a comparison of these factors between districts. **The differences between districts further emphasises the need for a more spatially-focussed planning approach to respond to the cultural and natural heritage places, and characteristics and important considerations for each district.**

Note: The data used in this section refers to both 2016 and 2021 ABS Censuses (at the ABS Statistical Area 3 level) as not all the 2021 Census data was available when the strategies were prepared. The intention is to update the district strategies when additional 2021 Census data is available and the ACT's population projections have been revised.

Population

Of the districts, Belconnen had the largest share of population in the ACT at 23% as of the 2021 Census, followed by Tuggeranong and Gungahlin (see Figure 4). The age profile differs between districts (see Figure 5), with the Inner North and City having a larger share of young adults (20–29 years age group) compared to the other districts, and Weston Creek, Woden and the Inner South having the highest proportions of retirees (over 65 years age group).

Dwellings and housing

Separate houses remain the dominant type across the ACT at 63% of dwellings in 2021, with Tuggeranong (82%), Weston Creek (80%) and Belconnen (69%) having the highest proportions (see Figure 6). However, the share of households living in semi-detached and apartment dwellings is rapidly increasing, reflecting trends such as decreasing household sizes and affordability, noting there is ongoing demand for separate houses. The proportion of semi-detached housing types is generally consistent across the districts, with Molonglo Valley (24%), Gungahlin (21%), Woden (20%) and the Inner North and City (18%) having a higher proportion than the ACT as a whole (17%).

Dwelling types

- In this analysis, 'separate house', 'medium density' and 'high density' refer to different development typologies, which may be different to how these terms are used in other contexts.
- **Separate house** refers to detached dwellings, typically on single blocks in areas zoned for low density residential.
- **Medium density** refers to attached and semi-detached dwellings (such as dual occupancies, townhouses and the like) and low-rise apartments.
- **High density** refers to apartment typologies of more than three storeys in height.

Separate houses

Medium density

High density

Figure 4: Total population by district, 2021

Figure 5: Age profile by district, 2021 – proportion of the population by age group

Figure 6: Housing types by district, 2021 (excludes 'other' dwelling types) – proportion of total dwellings

Note: data based on Statistical Area 3 (SA3) boundaries. Percentages may not add to 100% due to rounding.

Around 31% of ACT households were renting as of 2021. Rental households are said to be in housing stress if they spend 30% or more of their income on housing. The 2021 Census data suggests that besides East Canberra (which has a very small population overall), Belconnen has the highest proportion of rental households in rental stress (25%), followed the Inner North and City and Tuggeranong (both 24%); all are above the average (23%) across the ACT (see Figure 7).

Employment

Of the 220,000 jobs across the ACT (as of 2016), the Inner North and City had the highest share (31%), followed by the Inner South (22%) (see Figure 8). Among the districts with town centres, Gungahlin had the smallest share of jobs at 6%.

Employment industry types

Employment types have been grouped into four broad industry categories (see Table 2) based on 1-digit Australian and New Zealand Standard Industrial Classification (ANZSIC) used by the ABS – industrial, population serving, knowledge intensive and health and education.

In terms of industry types, knowledge intensive jobs make up around half of the ACT's employment, with the Inner North and City having the largest share (see Figure 9). Population serving jobs (including construction, retail and hospitality) make up the largest share in Molonglo Valley (noting it currently has no town centres or group centres which would influence this) followed by Gungahlin.

The largest shares of health and education employment are in Weston Creek and Woden, influenced by older populations and employment at Canberra Hospital and ACT Government offices. Industrial employment has the smallest share, concentrated in established industrial precincts in the Inner South, Gungahlin and East Canberra.

Table 2: Four broad industry categories for employment

Industrial
Agriculture, forestry and fishing
Mining
Manufacturing
Wholesale trade
Transport, postal and warehousing
Population serving
Construction
Retail trade
Accommodation and food services
Arts and recreation services
Other services
Knowledge intensive
Information media and telecommunications
Financial and insurance services
Rental, hiring and real estate services
Professional, scientific and technical services
Administrative and support services
Public administration and safety
Health and Education
Education and training
Health care and social assistance

Figure 7: Proportion of rental households in rental stress* by district, 2021

Figure 8: Number of jobs by district, 2016 (note: 2021 Census data not yet available)

Figure 9: Proportion of jobs by industry type by district, 2016 (note: 2021 Census data not yet available)

Note: data based on Statistical Area 3 (SA3) boundaries. Percentages may not add up to 100% due to rounding.

Planning for population and jobs

The district strategies use projections on the number of people and jobs that might be accommodated in the future. These are a starting point for land use and infrastructure planning, but initiatives in the district strategies will also influence future growth.

Note: The data and forecasts in this section are based on population projections from early 2022, which were prior to the release of the 2021 Census results. The intention is to update the district strategies when additional 2021 Census data is available and the ACT's population projections have been revised, so they reflect emergent trends and provide more detailed analysis of areas of potential future change and development.

Projected population

Understanding where the population is projected to grow or change helps the government plan for where housing, employment and infrastructure will be needed. Existing projections suggest the population will increase by around 135,000 people across the ACT by 2046 (a 31% increase on 2021). Some districts will see more growth than others, with the Inner North and City expected to have the largest share of the growth, apart from the greenfield area of Molonglo Valley. Over this time, the age profile is also projected to shift, with an increase in the proportion of people in the retiree age bracket (aged over 65 years).

What does this mean for housing?

Housing demand modelling was undertaken to establish the potential future dwellings in each district to cater for the projected population growth, with adjustments to recognise prospects for future additional dwellings. This modelling used the population projections combined with observed trends and propensities in ABS Census data over time to identify the number and type of dwellings that may be required; categorised as separate houses, medium-density dwellings and high-density dwellings.

As noted above, this modelling identified a need for around 57,800 new dwellings across the ACT in 2046, reaching 100,000 new dwellings in 2063.

Assuming the ACT's target for 70% of new dwellings to be within the existing urban boundary, **this means a target of around 40,500 new dwellings in infill areas by 2046 with 17,300 in greenfield precincts and, by 2063, 70,000 infill and 30,000 greenfield dwellings respectively.**

Distribution to districts

This overall dwelling growth has been allocated into the ACT's districts in alignment with the population in ACT Treasury's projections (note – this is not necessarily where new housing *should* go). The resulting dwelling targets for the longer-term (2063) horizon for each district are shown in Figure 10. Most growth in dwellings is projected in the Inner North and City (22%), Molonglo Valley (22%) and Belconnen (21%) districts.

The district strategies consider the housing targets in identifying areas for potential change across the city, including **infill areas**, while also having regard to greenfield precincts that are actively being planned by the ACT Government.

Focussing on urban growth opportunities within the existing urban area reduces the environmental consequences of continued urban expansion and reflects emerging changes in how we are living, including in smaller households, and what is affordable in relation to not only housing type but also location.

Figure 10: Potential future housing demand, based on recent population projections, 2046 and 2063

Source: ACT Government and SGS Economics and Planning, 2022.

Note: More detailed planning will determine where future development will be allocated. This is likely to depart from the future dwelling distributions shown here. Housing modelling has not been undertaken for East Canberra.

What does this mean for employment?

Modelling was undertaken to develop baseline employment forecasts by employment area across the ACT to help guide the district spatial planning at a strategic level. The forecasts have identified notional job targets for key employment areas, including the town, group and local centres and other precincts such as industrial areas. The forecasts account for employment that is:

- generated by population growth and new housing – jobs associated with population services like retail and hospitality
- strategic employment – less focussed on a local population catchment, such as large government offices or industrial precincts.

The modelling utilised the ACT's population projections and trends observed in Census data for employment and industry types, the spatial distribution of jobs across the ACT's centres and other employment precincts, and other more recent ABS data to forecast the future level of growth across the ACT by employment type. The employment forecasts can be used to understand and plan for the type and amount of floorspace that may be needed in locations in future.

The resulting employment forecasts for the ACT show a target of around 85,000 additional jobs by 2046, and another 57,000 jobs between 2046 and 2063 (the longer term planning horizon).

Distribution to districts

The projection of additional jobs in each district is shown in Figure 11. The allocation is influenced by the existing distribution and location of jobs between centres and other employment areas within the ACT (based on the 2016 Census). Over the projection periods employment will grow in the Molonglo Valley as it develops. The central city area shared between the Inner North and City and Inner South is projected to see the largest share of jobs given the presence of major employment precincts in those districts.

Where used for centre or precinct planning, the forecasts should be considered a baseline or a minimum. Areas and centres where the district strategies have identified policy aspirations for a particular focus on generating additional employment beyond these baseline forecasts are also indicated in the district-specific section (see Section 5).

Note:

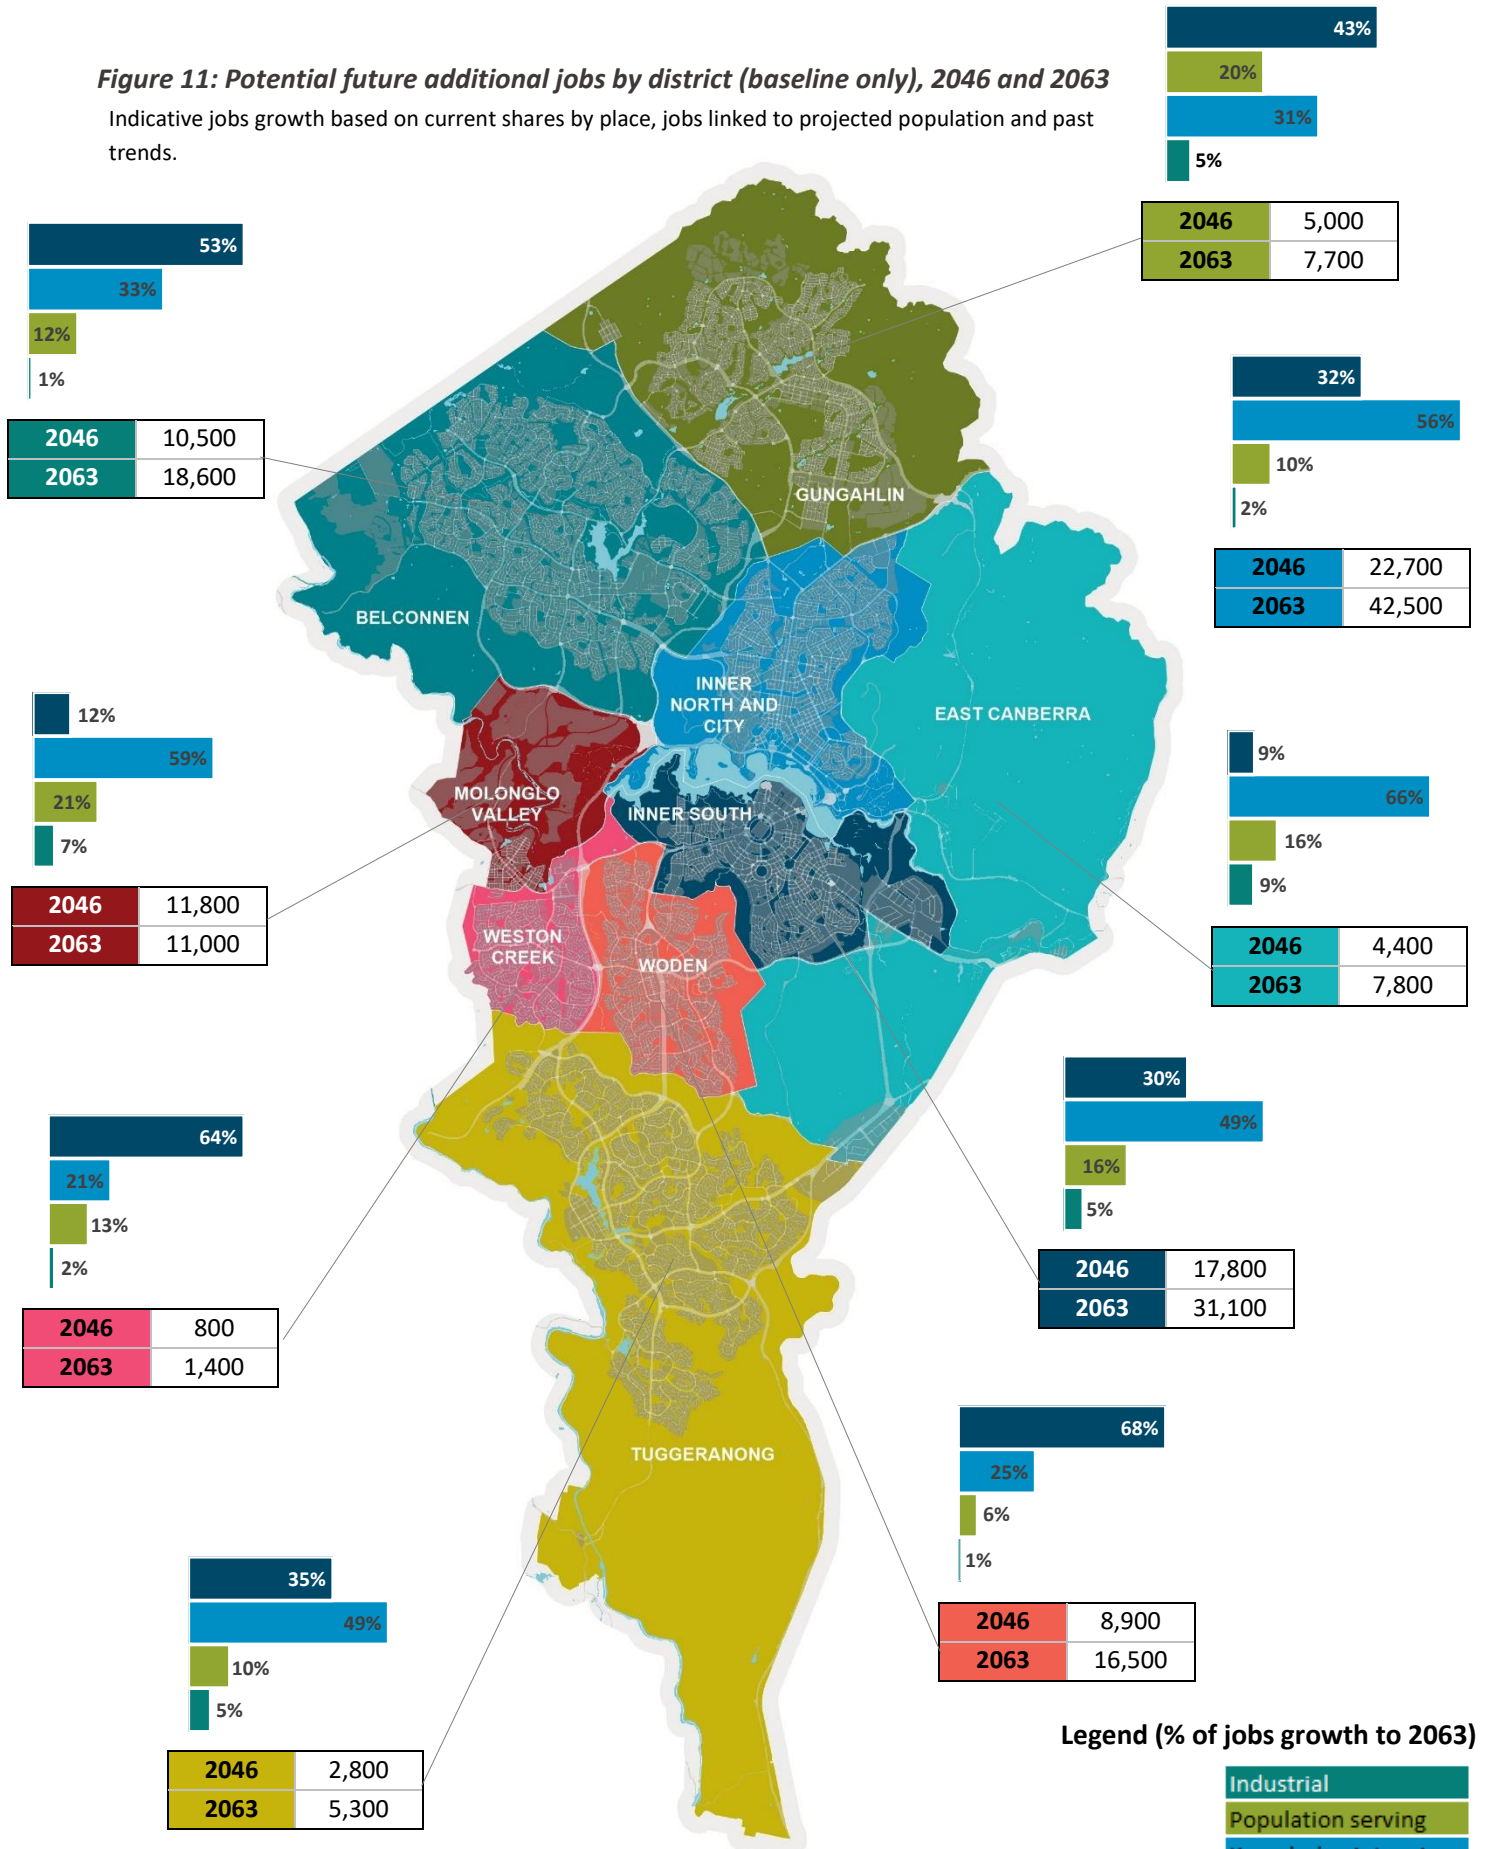

The analysis of potential employment futures is linked to the population projections from early 2022, which were prior to the release of the 2021 Census results.

The district and place allocations draw on the 2016 spatial distribution of employment.

The intention is to update the district strategies when additional 2021 Census data is available and the ACT's population projections have been revised, so they reflect emergent trends and provide more detailed analysis of areas of potential future change and development.

Note: excludes small number of jobs in areas outside of the nine districts.

3. Five big drivers of district planning

Photo credit: ACT Government.

Objectives for the district strategies

In preparing each district strategy, a range of ‘planning and design objectives’ were applied. These objectives were informed by the proposed growth of each district, the spatial context and existing challenges and opportunities.

The vision of the 2018 ACT Planning Strategy is for Canberra to be a sustainable, competitive and equitable city that respects Canberra as a city in the landscape and the national capital, while being responsive to the future and resilient to change. The Planning Strategy has the following five related themes.

1

Compact and Efficient City

- Grow mostly within our urban footprint or in areas close to our footprint
- Maintain environmental values
- Use infrastructure effectively to support an efficient, sustainable and liveable city

2

Diverse Canberra

- Celebrate our culture, uniqueness and difference
- Be innovative and continue to diversify
- Support a city structure that strengthens our economy, and the economy of the region

3

Sustainable and Resilient Territory

- Adapt to a changing climate and establish resilience in our built forms, infrastructure and natural assets
- Look after natural resources
- Support the transition to net zero carbon emissions by 2045

4

Liveable Canberra

- Create cohesive communities through good design, amenity and connectivity
- Be socially and culturally inclusive
- Support housing diversity for greater choice

5

Accessible Canberra

- Provide equitable access to all that the city has to offer
- Include more options to move around in a connected and fair city
- Better integrate land use and transport planning

Five big drivers

To translate the vision and directions of the Planning Strategy to the district level, planning and design objectives were developed and applied under the following **five big drivers**.

These drivers and the district planning consider not just where development may happen, but the social, environmental, economic, transport and amenity factors that are also essential to creating liveable places. New development should be supported by appropriate community facilities, transport and other infrastructure, and employment opportunities. Avoiding and mitigating further impacts on our natural environment and open spaces must be considered.

Figure 12: The five big drivers of district planning

The following pages consider the existing spatial context and opportunities and challenges at the metropolitan level for each of the five big drivers and outline the associated objectives for the district planning. **These objectives have guided the approach to the planning work and will, in turn, guide what is expected of future development across all the districts.**

The Planning Strategy themes that each objective responds to are highlighted by the numbering in the objectives table for each of the five big drivers.

Blue-green network

Ecological sustainability integrates the protection of natural environment values with respect, protection and support for cultural systems and values.

The ACT is exemplary in conserving more than 70% of its 236,000 hectares in formal nature reserves and national parks. An additional 6,600 hectares is public urban open space that contributes considerably to residents' wellbeing. Many important environmental and cultural values occur on sites across the urban area and are highly valuable as they support threatened ecosystems, provide habitat for native species or facilitate habitat connectivity.

Integration of formal and informal conservation areas with the evolving urban structure can include a well-designed 'blue-green' infrastructure network. This network is founded on the landscape context and paths, cycleways and recreational open space. It facilitates community wellbeing, links towns and urban areas and supports natural and cultural values. Such access allows people to understand and build their awareness of their city within its broader natural and cultural contexts and to be participants contributing to the character, conservation, stewardship and enjoyment of place.

LEGEND

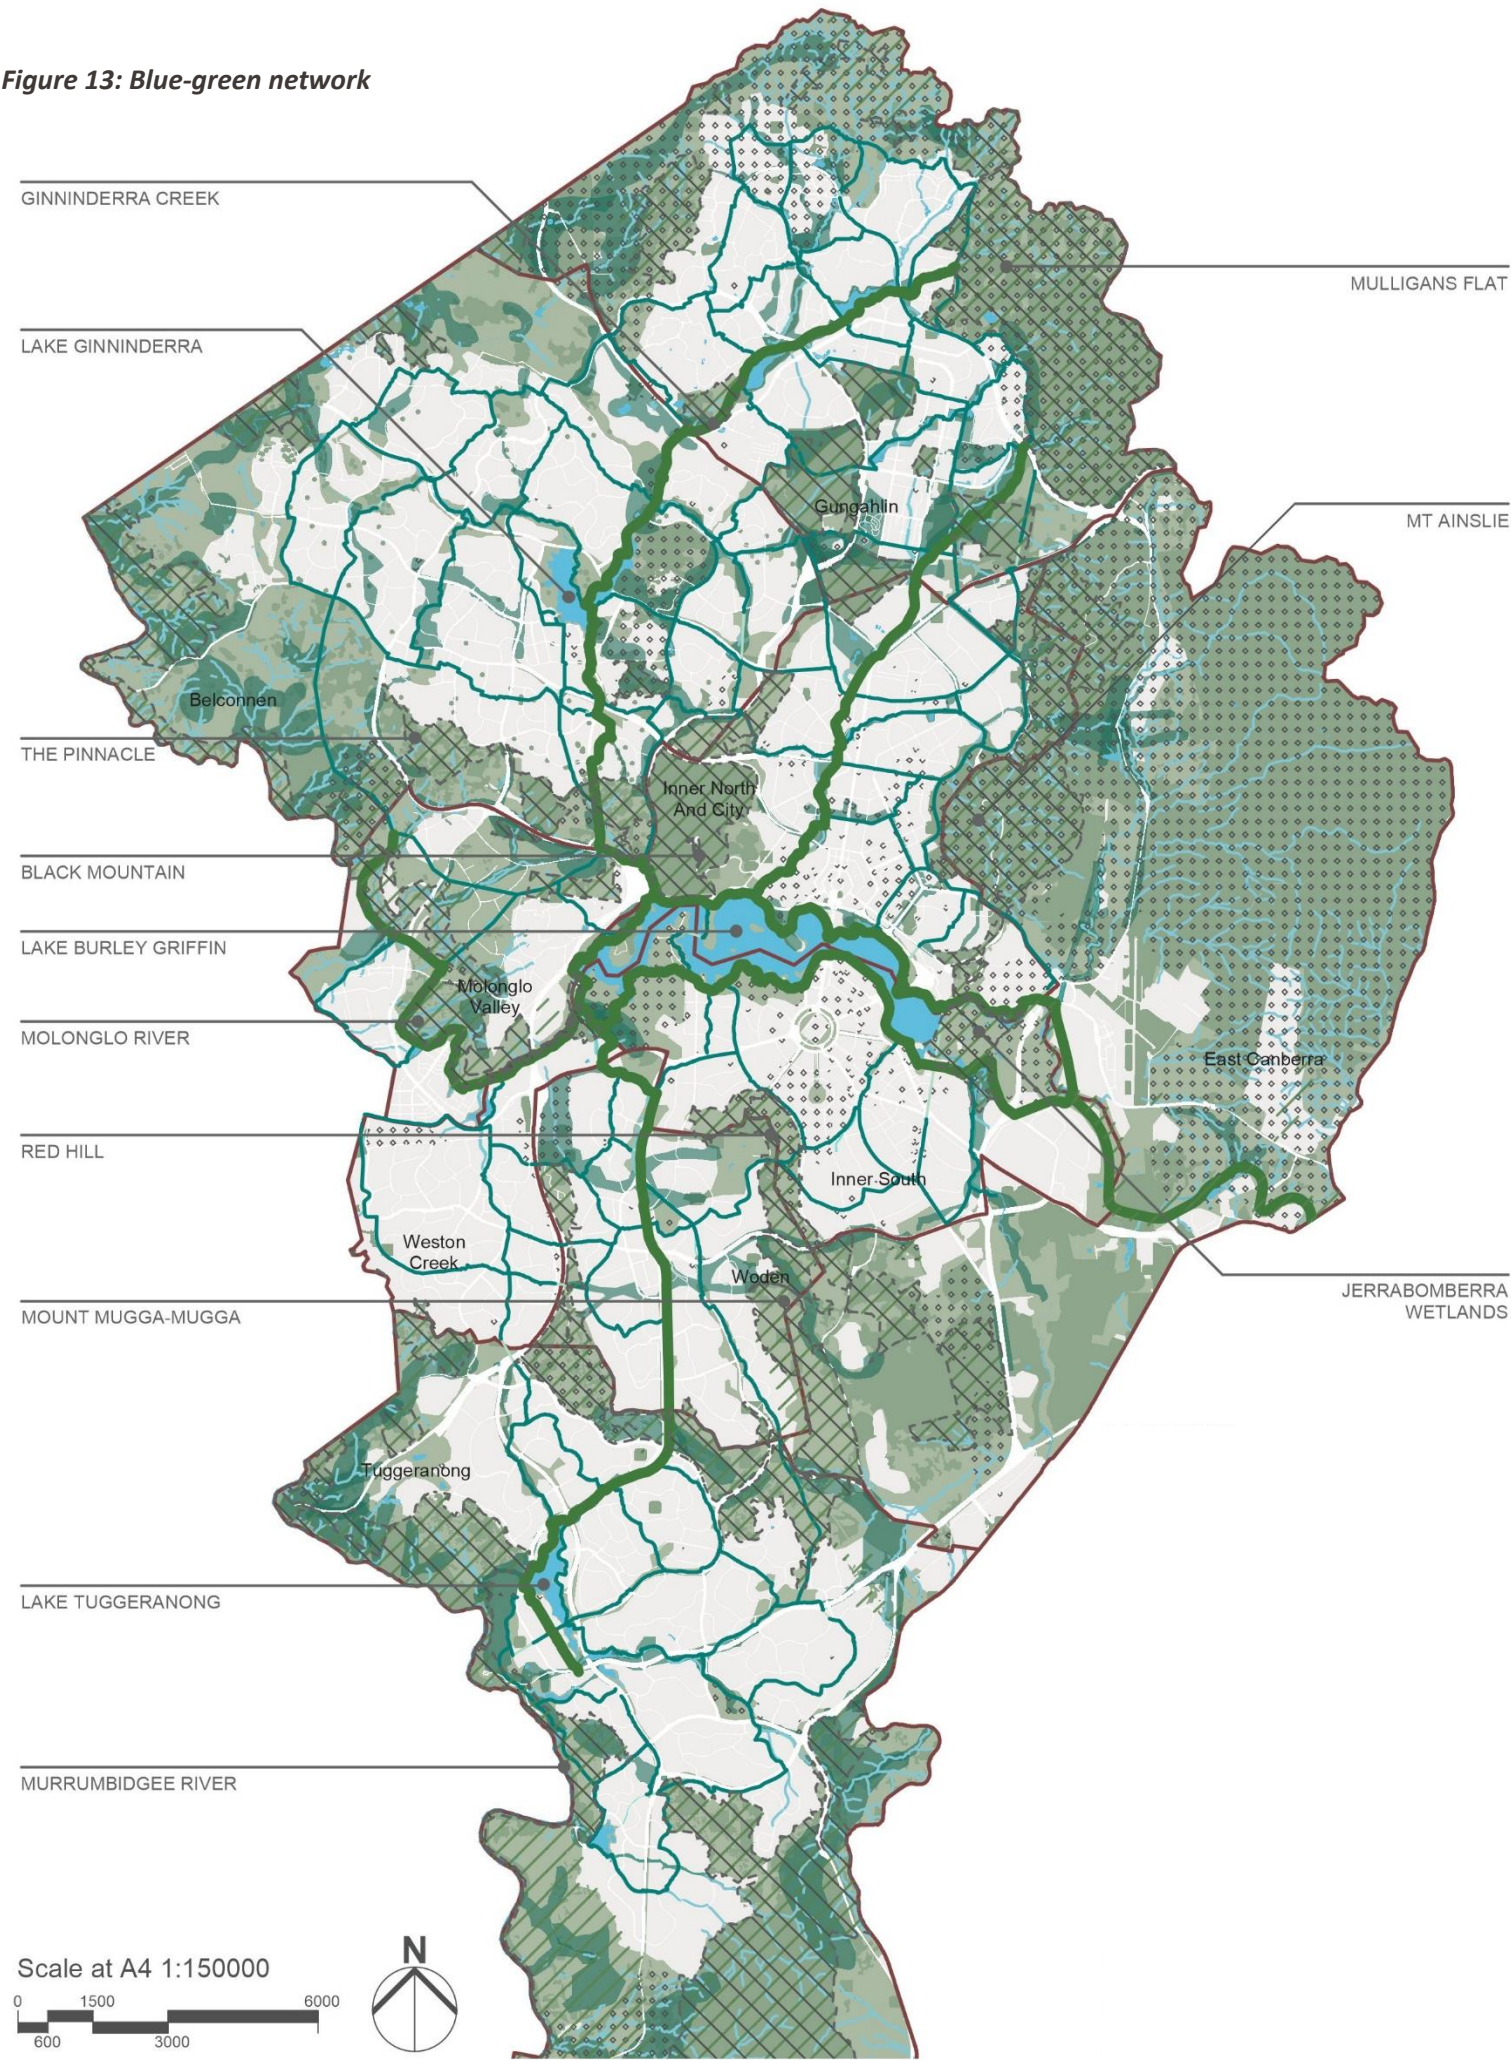

Primary network: spans Canberra, along the waterways which bring life to this place – the Molonglo River, Sullivan's Creek, Ginninderra Creek and Yarralumla Creek.

Secondary network: intersects with the primary network through and between districts, building upon the existing active travel networks.

Blue-green connections: extend liveable blue-green network by establishing priority connections.

Figure 13: Blue-green network

The blue-green foundation for development

The **primary network** spans Canberra's landscape and waterways giving life to this place, providing cultural pathways and resources for Ngunnawal ceremony and cultural practices. It includes the Molonglo River, Sullivan's Creek, Ginninderra Creek and Yarralumla Creek, amongst others.

This primary network provides functions for recreation and active travel, where this is consistent with the role of these corridors and places for biodiversity, as well as flood conveyance and storage, stormwater treatment and tree canopy. The network welcomes all Canberra's residents and provides the opportunity to celebrate Traditional Custodians' cultural connection and understanding of Country as the region's first people.

The **secondary network** intersects with the primary network to connect through and between districts while building upon the existing active travel network. These secondary connections reflect the specific layout and characteristics of each district. Their design will enhance and generate new corridors between places, both for people and for biodiversity.

Together, the primary and secondary networks create a liveable blue-green network, intersecting with existing networks (public transport and streets, urban reserves and public open space) at new junctions with potential for place making and enhancing the community's understanding and connection to Country. The ACT's active travel network supplements this as the **tertiary network** in local streets and places (illustrated at the district level in Section 5).

Sitting alongside these networks are connections and areas for conservation and biodiversity. Where human recreation opportunities and conservation and biodiversity values can be appropriately integrated, primary or secondary liveable blue-green network extensions should be contemplated as Canberra develops.

Planning should reflect aims and initiatives in ACT Government policies

District planning does not take precedence over other Government plans and policies, but instead supports and enhances the objectives and initiatives for our environment and cultural heritage as set out in key documents including the [ACT Nature Conservation Act 2014](#), ACT Nature Conservation Strategy, ACT Water Strategy, ACT Climate Change Strategy 2019–25, national park and nature reserve plans, the draft Mature Native Trees Action Plan and Canberra's Living Infrastructure Plan: Cooling the City (2019), amongst others. The Environment, Planning and Sustainable Development Directorate (EPSDD) also has Closing the Gap and reconciliation action plan commitments and is developing a cultural resource management plan to support Ngunnawal people to care for Country.

Ecology and heritage

The heritage and ecological qualities of the ACT are special and need to be respected and protected. This includes threatened and protected species, threatened ecological communities, nature reserves and national parks, and priority areas for a biodiversity conservation network, habitat connectivity and environmental restoration. It also includes heritage places – both Aboriginal and European – and intangible living cultural values.

The protection of heritage and biodiversity values is mandated by ACT Government and Australian Government law and should be a primary consideration in all planning and development decisions.

Table 3: Objectives for district planning – blue-green network

Alignment to Planning Strategy themes	Objectives
<div>23</div>	<p>Plan and design with Country – Plan with the Ngunnawal Traditional Custodians of Country to protect, restore and manage sites of cultural significance through Connecting to Country conversations with the Ngunnawal knowledge holders as appropriate.</p>
<div>3</div>	<p>Restore, protect and expand the ‘blue’ network – Take opportunities to restore, protect and expand the quality of water courses and riparian corridors, creeks and wetlands, including by implementing and maintaining water sensitive urban design (WSUD) initiatives in new public space and infrastructure.</p>
<div>135</div>	<p>Build on the urban structure, heritage and the ‘green’ network – Build on Canberra’s Griffin legacy and urban street hierarchy by integrating nature in the city, ecological sustainability, bio-diversity sensitive urban design (BSUD), wildlife habitat corridors and 30% surface permeability.</p>
<div>34</div>	<p>Expand opportunities for human movement through the blue-green network where compatible with conservation and biodiversity values – Protect nature reserves, urban parks and open space areas while integrating as part of the ‘urban experience’ for public enjoyment and recreation appropriate to the nature of the space at the ACT, district and local scales while recognising that some spaces and connections are required for conservation outcomes and may not be suitable for recreational uses.</p>
<div>34</div>	<p>Maintain and expand urban tree canopy cover – Maintain and expand vegetation cover and permeability in private and public open space for its habitat, biodiversity and ‘cooling’ values while avoiding and minimising bushfire risk.</p>

Economic access and opportunity across the city

Providing better access to economic opportunities closer to home can be achieved by: enhancing the ACT's hierarchy of employment centres; building on clusters of advanced health, education, science, technology and sports activities to develop innovation precincts; and providing direct and faster public transport connections. Contemporary centres that attract people are typically characterised by a mix of uses and a diversity of building forms, size, type and affordability.

Accommodating future industrial land in existing and new industrial precincts will add to economic diversity and growth.

LEGEND

Economic Precincts

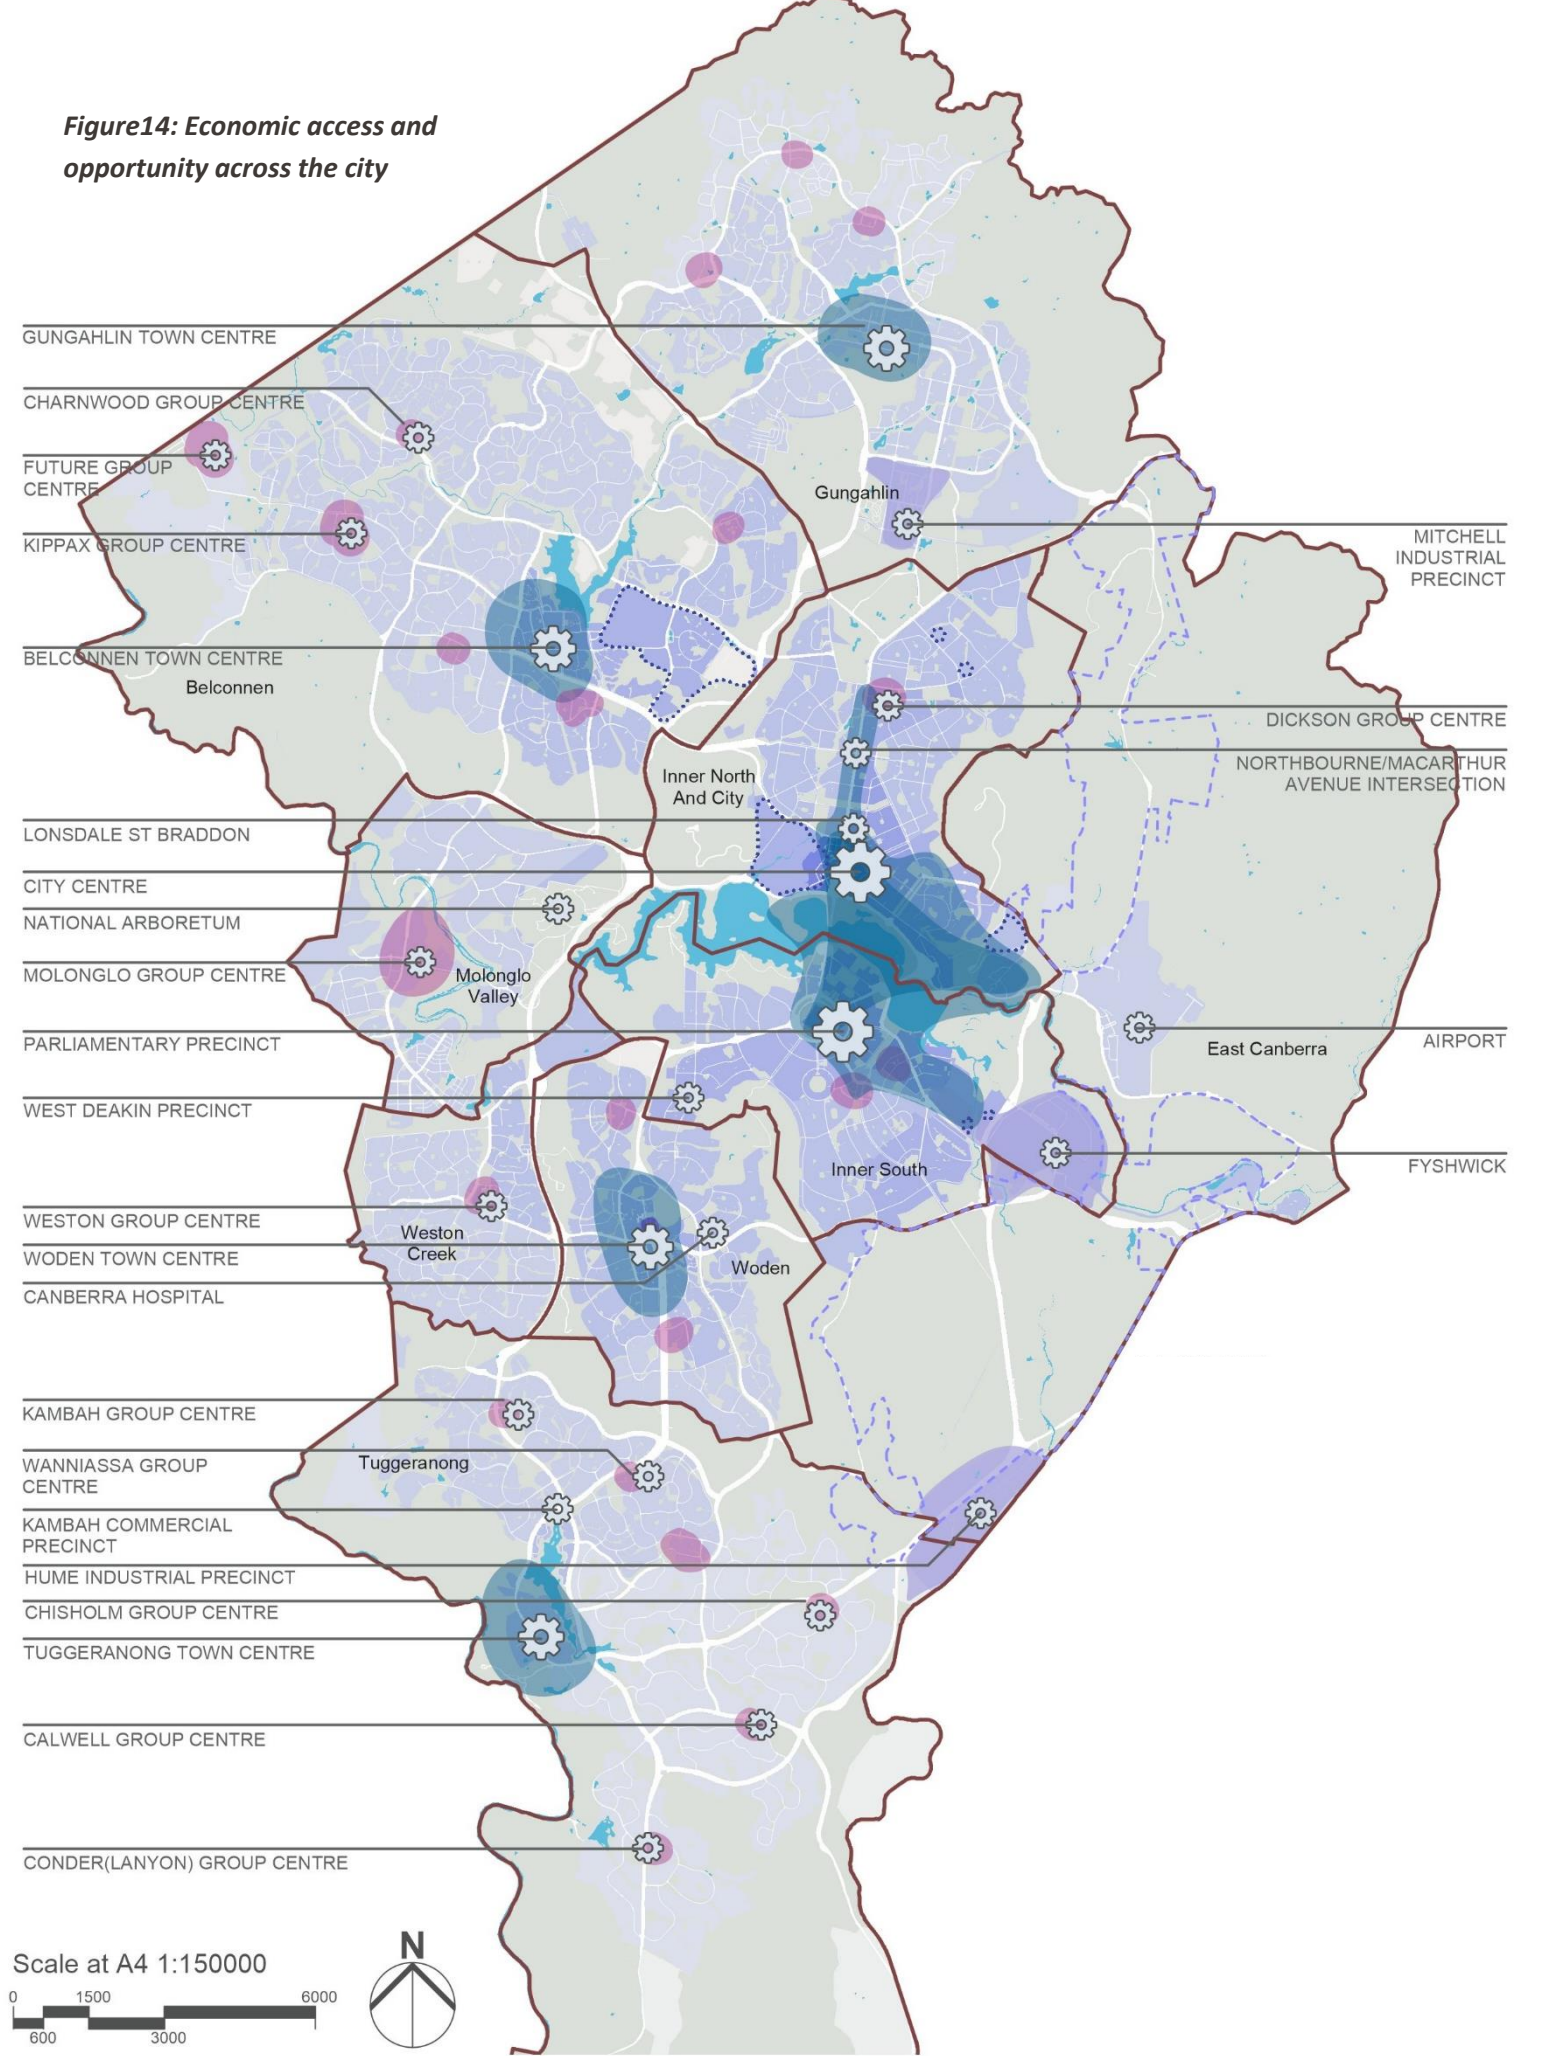

Relative Access to Jobs

Innovation precincts: areas with clusters of key employment uses and anchor institutions, such as hospitals, university campuses and science hubs, and elite sports precincts, where planning will seek to better integrate built form, movement and connections to contribute to economic growth, economic diversification and collaboration.

Economic and employment focus: locations where planning and other initiatives will support Canberra's key economic nodes and precincts as well as strengthening selected town and group centres to provide more economic opportunities and jobs closer to home.

Figure14: Economic access and opportunity across the city

Established hierarchy of centres (City Centre and town, group and local centres)

The existing hierarchy of centres is intended to provide a focus for retail, services and employment and encourage a multi-centred urban structure. However, many of Canberra's existing and emerging concentrations of office employment and other key assets are not contained to these centres. At the same time, many smaller centres are declining, with higher vacancy rates, lower patronage and reduced economic output.

Impact of out-of-centre development

Areas such as Canberra Airport have grown as employment locations, including campus office precincts. While these office precincts are important areas for business and economic growth, they are outside the centres hierarchy and disperse employment more widely. The Parliamentary Zone and surrounds contain major Australian Government and other offices hosting core employment. However, Australian Government decisions on office locations and staffing levels may not align with the ACT Planning Strategy or the desired hierarchy of centres.

The City Centre's key role

The City Centre continues to have a key role in Canberra's economy. It is increasingly the pre-eminent location for knowledge jobs, major retailing, hospitality and entertainment activities. Creative and cultural uses are also concentrated in and around the City Centre.

Other major employment centres and hubs

Canberra Airport plays a critical economic role and will continue to develop as an aviation and business hub. Hospitals, health hubs, university campuses, science hubs and even sports precincts across the ACT are also emerging as key employment centres.

They provide an opportunity to further develop as innovation precincts. Canberra also has a range of major attractions and national institutions, reflecting the city's role as the national capital and providing significant tourism and visitor opportunities that benefit the ACT economy.

Importance of industrial areas

There is a low share of jobs in industrial-based employment sectors but this may grow in future along with growth in the population and the economic diversity of the city. The industrial precincts of Fyshwick and Mitchell are therefore critical as locations for basic urban services (activities that are important to the functioning of cities) and future growth prospects, while Hume also provides a region-wide hub for higher-impact industrial activities and freight and distribution functions. These areas should be protected from encroaching commercial, residential and retail uses that could be accommodated in centres. Demand for future industrial land uses needs to be accommodated in these existing areas and in new industrial precincts which will be identified where possible, to add to Canberra's economic diversity.

Concentration of employment and disconnect with where people live

The existing spatial distribution of employment centres and economic drivers are highly concentrated in the East Canberra, Inner North and City, and Inner South districts while the public transport network is focussed on travel to the central and inner employment hubs. Analysis of 'Effective Job Density' (a measure of access to jobs – Figure 15) shows that residents in Canberra's central areas – particularly the Inner North and City, Inner South, Woden and the east of Belconnen – have the best access to employment. Residents in the northern parts of Gungahlin, Tuggeranong and northern and western Belconnen typically have the lowest proximity and access to jobs.

Flow on and compounding effects in access and opportunity

This disconnect between where people live and their relative access to a pool of employment makes a difference to the life opportunities of residents in the areas with less access. The spatial disadvantage in terms of access to jobs is sometimes compounded by relative socio-economic disadvantage. Socio-economic indicators below the Canberra average are typically found and concentrated in selected outer suburbs (see Figure 22 under the Inclusive centres and communities driver). To address this spatial disconnect between job concentrations and residential locations, the district strategies plan for and support more jobs being available locally, including in the town centres and centres in greenfield precincts and outer suburban areas, as well as enhanced access to existing key employment centres in central Canberra via the transport network.

Figure 15: Effective job density (EJD), 2016

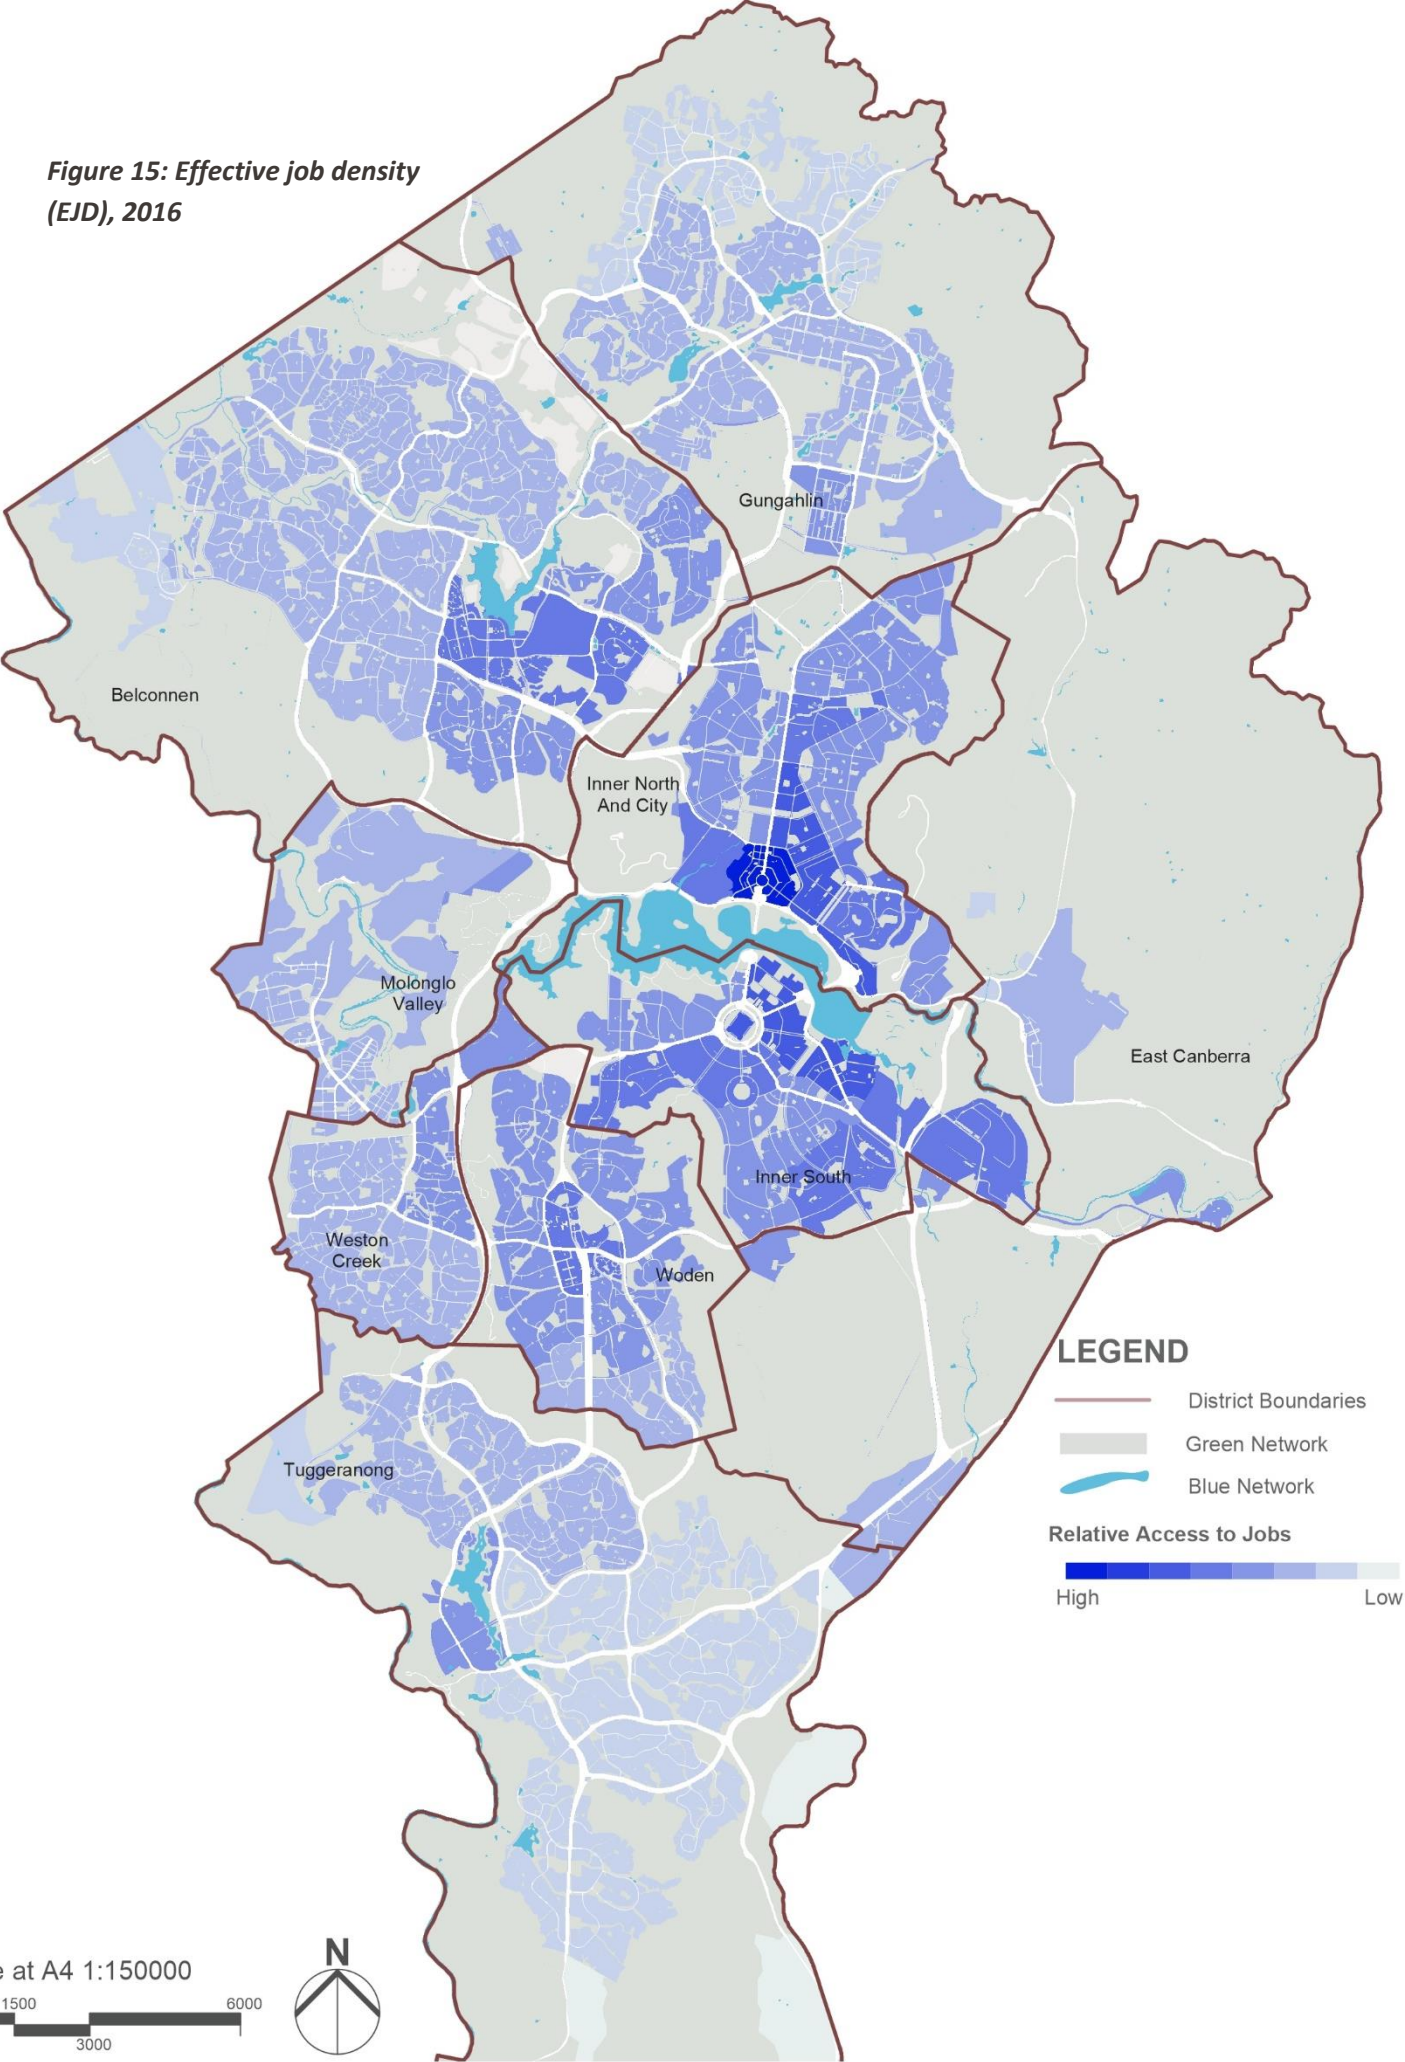

Table 4: Objectives for district planning – economic access and opportunity across the city

Alignment to Planning Strategy themes	Objectives
1 2	<p>Reinforce the pre-eminent City Centre – Reinforce the City Centre as the pre-eminent commercial, retail, entertainment and accommodation location in the heart of the city.</p>
2 4	<p>Provide jobs close to home in town and group centres – Reinforce and concentrate services, retail and office development in town and group centres, reinforcing the idea of what is sometimes referred to as the '30-minute city' (see ACT Transport Strategy) with a particular economic and employment focus on:</p> <ul style="list-style-type: none"> • regional/district office development, civic and cultural investment in Gungahlin, Belconnen, Woden, Molonglo Valley and Tuggeranong • district and local retailing, service and enterprises in group centres in areas with poor job access.
1 2 4	<p>Integrate future employment floorspace to meet job aspirations – Build sufficient capacity for employment floorspace into planning controls in town and group centres, including light industrial. This can be aligned with projections and aspirations for employment growth.</p>
2 5	<p>Support public and active transport and public domain with amenity in centres – Provide local public/active transport networks and public domain treatments that support liveability/amenity within and between all centres including tree canopy cover and cool public spaces.</p>
3 4 5	<p>Protect and expand vital industrial and service trades precincts – Protect existing industrial and service trades precincts from encroachment of uses that are allowed for elsewhere (in other zones), and support opportunities for employment growth, including allocating industrial land in new/greenfield areas.</p>
2	<p>Develop selected innovation precincts – Build on clusters of advanced health, education, arts, science and sports activities to develop innovation precincts where feasible.</p>
2	<p>Develop visitor attractions as economic assets – Build on science, tourism, arts and visitor assets to create additional employment opportunities.</p>

Strategic movement to support city growth

Public transport is essential to contemporary sustainable cities. It is the urban structure for community and economic city life – connecting people to the activities that sustain them.

The light rail network is city-shaping infrastructure, supported by the rapid bus network. Both provide the opportunity to stimulate development, deliver supporting initiatives to encourage walking and cycling, and enhance urban design to make sure there is a lively and sustainable city. The rapid transit network as shown in Figure 16 aligns with the initiatives in the ACT Transport Strategy. Strategic investigation corridors that might support future rapid transport links and a stronger network of connections to and between activity nodes are also identified – these are explored more in Section 5 for each district.

Major freight and commercial traffic will utilise movement corridors (road and rail) that are separated from high amenity settlement areas.

Figure 16: Strategic movement to support city growth

Strategic public transport

The district strategies provide the land use response to the ACT Transport Strategy 2020 with the particular aim of addressing Canberra's car dependence and accelerating Canberra's evolution to a lively sustainable city. Only about 8% of journey to work trips are currently by public transport.

A key focus of the district strategies is the role of the public transport network in supporting the desired growth and revitalisation of centres, and reaching the Planning Strategy direction of achieving up to 70% of new housing within the existing urban footprint.

The district strategies adopt a long term perspective on Canberra's future development directions, including its distributed network of centres and economic activity nodes. In addition to existing or proposed strategic public transport or other movement corridors, 'strategic investigation corridors' are also identified. These corridors might support future rapid transport links and a stronger network of connections to and between activity nodes. Future analysis would confirm their role and viability as extensions to the strategic movement network.

Light rail network

Part of the strategic public network, the light rail network is a transformative opportunity for the ACT to capitalise on its urban structure and centres hierarchy with:

- Gungahlin to the City Centre completed
- extension to Commonwealth Park approved and construction commencing in 2024
- the City Centre to Woden in the planning stage, representing a major opportunity for transport-focussed land use and development in the Inner South and Woden.

Future corridors are proposed and require further investigation, including Belconnen to Canberra Airport and Woden to Tuggeranong.

Rapid and local buses

The established rapid bus network is also key strategic transport for the city and for connecting and reviving centres – particularly group and local centres. Local buses remain critical connectors to the rapid and light rail network, and to supporting neighbourhoods and local access to services.

Major roads and freight

Safe and efficient freight movement is vital to the liveability and prosperity of the ACT. Orbital transport networks (road, rail and air) are planned and designed for larger vehicles and trucks associated with bulk goods movement to key freight hubs. The major road network facilitates movements of traffic, particularly north–south via peripheral parkways such as the Tuggeranong and Majura parkways. It is important that these corridors are reserved and designed primarily for by-passing, freight and commercial traffic, focussed on 'business to business' connections, and with a reducing role for commuter and journey to work traffic.

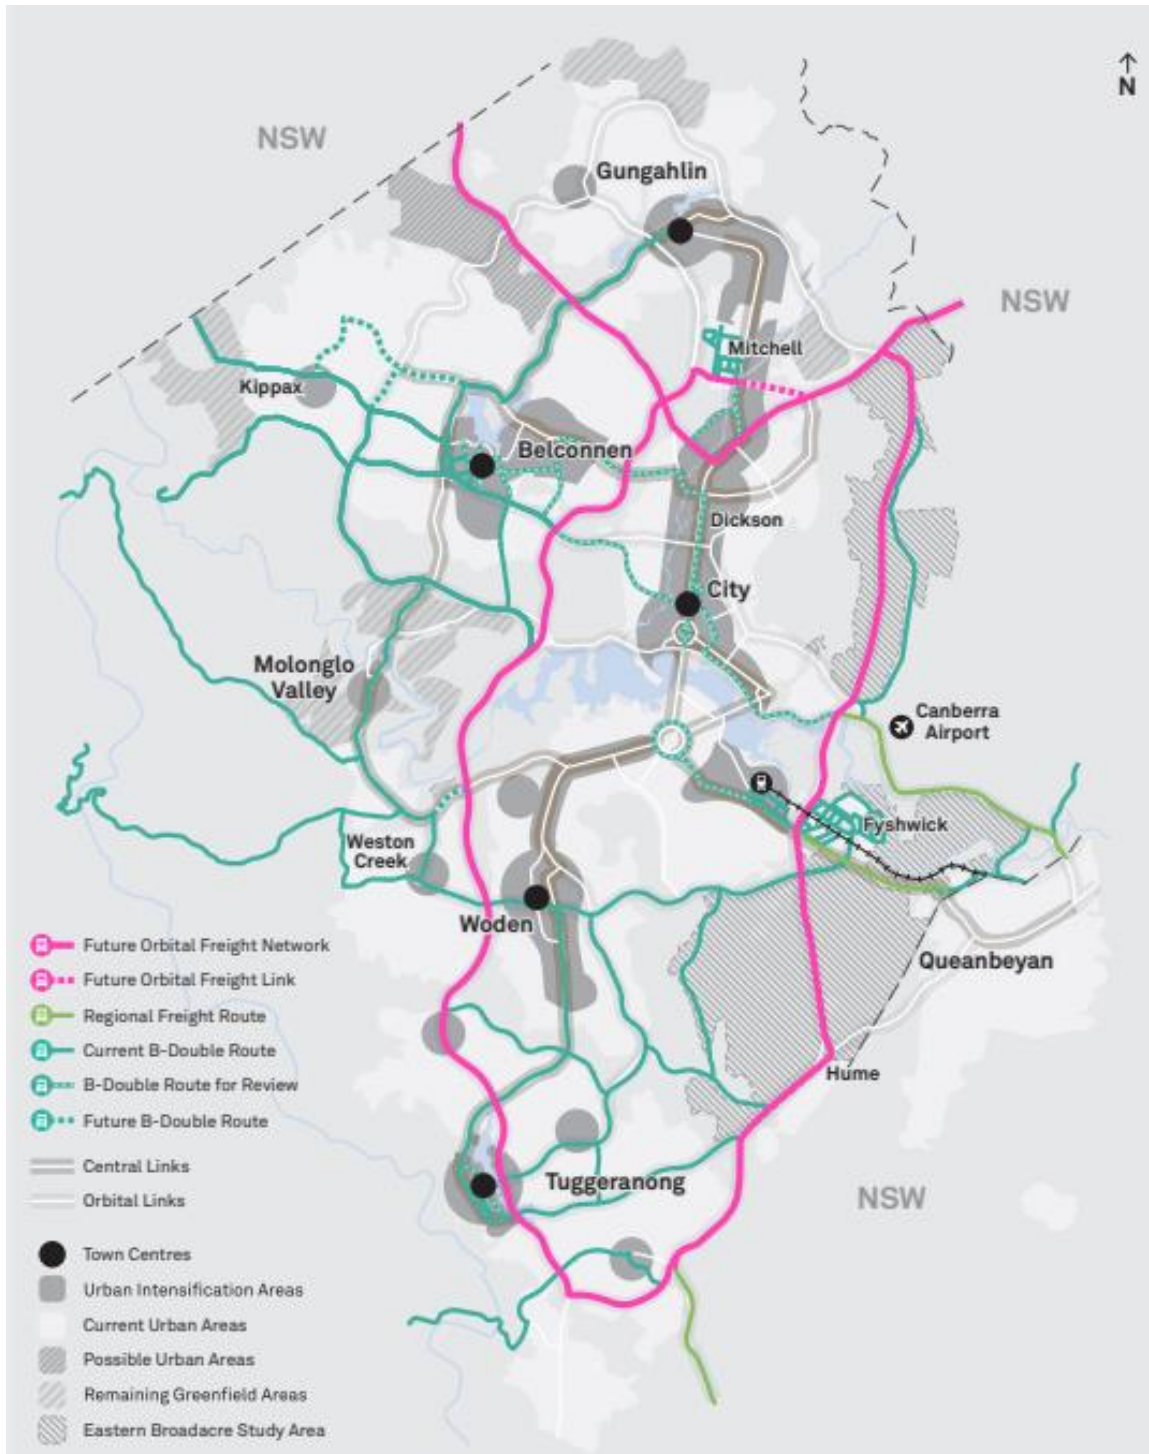

District road hierarchies provide for the 'last kilometre of a journey', between arterial roads and local destinations. Planning for access and design for interface issues, including delivery, loading, parking, noise and amenity is essential to support city life.

The ACT is a signatory to national transport reforms that require infrastructure upgrades to the freight network. These include road and bridge upgrades to accommodate heavy and higher mass freight vehicles, subject to funding over time. The Building an Integrated Transport Network – Freight (2016) and the ACT Transport Strategy also outline long-term objectives for Canberra's freight network (illustrated in Figure 17). Canberra Airport is also a key asset within the city's distribution and freight network.

The freight network is a crucial part of Canberra's functioning as a city. It is an important factor for

ACT-wide place and movement planning, but is most relevant for the East Canberra district, where Canberra Airport and other freight hubs are concentrated.

Figure 17: ACT orbital links and freight network

Source: ACT Government, 2020

Active travel

Given parts of Canberra's topography are relatively flat, major active travel networks across the city provide a genuine commuter alternative to other forms of transport in many areas. They also provide opportunities to integrate physical activity into daily life to improve peoples' health and wellbeing.

Canberra has a relatively high rate of cycling compared to other Australian cities, particularly for social and recreational trips. Walking, cycling and micro-mobility participation needs to further increase over time to shift from vehicle to active travel modes.

Prioritising new off-road paths and protected cycleways on key routes and completing missing path links is required to improve active travel infrastructure.

The ACT's 'Movement and Place' transport and planning approach promotes active travel based on the function of a street. Active streets can make it easier for people to shift away from private car dependence, connect with public transport and reduce the amount of land dedicated to roads and parking.

Shifting to sustainable forms of transport reduces emissions and improves the quality of life for Canberra's growing population. Main community routes in the ACT's cycling network prioritise efficiency and separation of facilities for the safe and direct movement between districts and key centres. Active streets that are safe, green, accessible and walkable provide local access and create places for people, not cars.

The ACT's Active Travel Plan has been designed to enable more people to take up active travel, making it safer, more accessible, convenient and enjoyable to choose walking, cycling or micro-mobility – whether for commuting, exercising or socialising.

Table 5: Objectives for district planning – strategic movement to support city growth

Alignment to Planning Strategy themes	Objectives
2 5	<p>Provide transport connections to employment and economic opportunities – Provide strategic transport connections with direct and timely access to central and eastern concentrations of jobs, particularly from lower socio-economic and ‘job-poor’ areas in the outer parts of the city.</p>
4 5	<p>Develop movement corridors for all modes of transport – Develop multimodal corridors containing Canberra’s rapid public transport network along new and existing urban boulevards with an emphasis on creating attractive places.</p>
2 4 5	<p>Dedicate heavy vehicle movement corridors – Direct heavy vehicular traffic to road-focussed ‘movement corridors’ such as the orbital reserved/designed primarily for by-passing, freight and commercial traffic, and away from residential development wherever possible.</p>
2 4 5	<p>Support housing renewal and connections to centres – Provide rapid transit routes that support high amenity residential intensification/mixed-use urban outcomes with direct connections to centres (as appropriate).</p>
1 4 5	<p>Provide rapid connections to key group and local centres – Provide a rapid network that assists to connect and revive key group and local centres (particularly economic and employment focus centres), reinforcing ‘30-minute city’ aspirations (see ACT Transport Strategy).</p>
2 5	<p>Develop the local bus network – Develop the local bus network to:</p> <ul style="list-style-type: none"> • strengthen connections to the rapid routes and light rail • increase local community accessibility to services • support local centre and community revitalisation.
3 5	<p>Provide a safe and comprehensive commuter cycling network – Identify opportunities for expanding and upgrading cycling corridors to create a safe and comprehensive commuter network that connects all group and local centres and connects to rapid transport stops. Prioritise pedestrian and cyclist safety and amenity, including separation of paths from general traffic.</p>
3 5	<p>Accelerate decarbonisation of the transport sector – Use the transport sector to contribute to emissions reduction by:</p> <ul style="list-style-type: none"> • expanding public transport options to service high-density developments through light rail or electric buses • expanding active transport infrastructure and considering speed limits to protect riders in suburban areas • enabling zero emissions vehicle infrastructure in all new developments at appropriate building or precinct scale to support zero emissions vehicle uptake in alignment with the ACT’s electric vehicle charging outlook, Zero Emissions Vehicle Strategy and the recent announcement of phasing out of internal combustion vehicles from 2035.

Sustainable neighbourhoods

Creating sustainable places requires an integration of the right mix of land uses, urban density and local amenities such as accessible public spaces, walkable streets and connectivity via active and local transport to retail and services. The more amenities, the more diversity and density that can be supported.

New development is a means for sustainable transformation. It enables 'urban improvement' including improving streets and public domain with more connections and greenery to encourage walking and local liveability, while also contributing to the zero carbon ambition.

New development in future should incorporate new social and affordable housing, including the 15% target on residential land release sites in the ACT Housing Strategy.

LEGEND

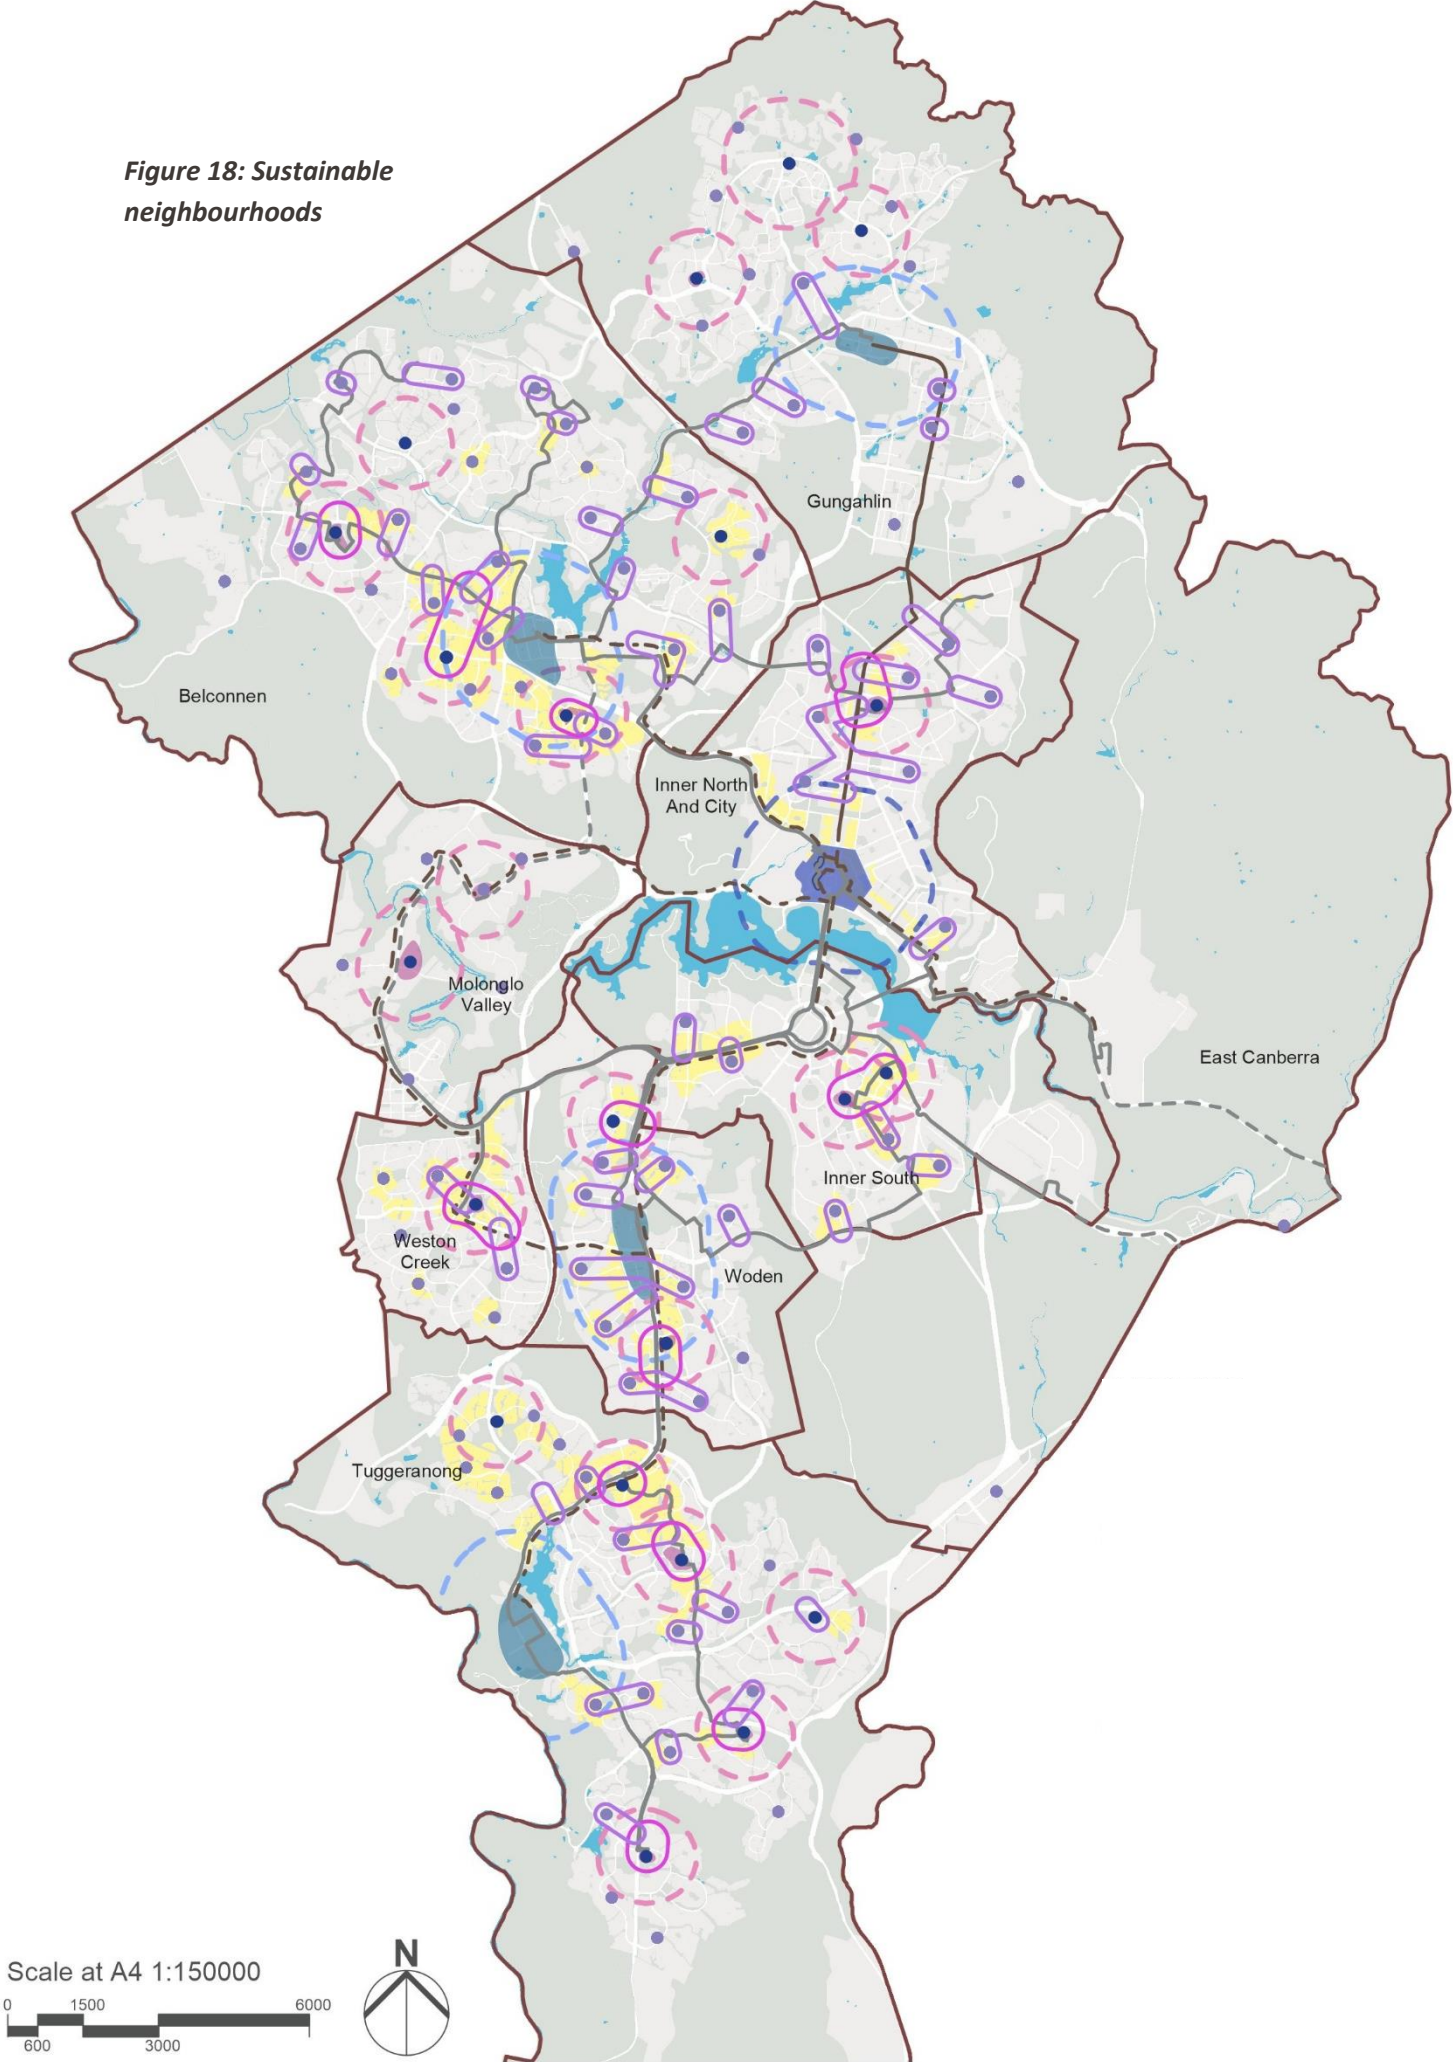

Rapid stop connecting to local and group centres: areas which may be suited to redevelopment to enhance public transport connectivity which respond to:

- stops on the rapid transport network (including future light rail)
- existing centres up to 1,200m from a stop
- existing centres with public space linkage to the stop
- and provide either a 200m wide or 400m wide corridor.

Opportunities to develop these areas will be considered in Future Investigation Area analysis and planning.

Town and group centre catchments: indicate catchments within typical travel distance from centres, based on the ACT's hierarchy of centres – larger centres with more services cater to a larger catchment. Note these catchments differ from the walking area catchments identified in the ACT Active Travel Plan.

Figure 18: Sustainable neighbourhoods

Mixed-use centres to support local liveability in appropriate places

Many centres have evolved to have a strong mix of employment and residential uses; these are typically emerging as desired locations. However, some districts have less land use diversity in their local or group centres, which can impact on the mix of employment, level of usage and activity, overall amenity and ability to fulfil their role in the centres hierarchy. Post-COVID, mixed-use centres will be potential assets to focus on as more people work from home and spend more time locally than previously. Providing land use and built form diversity in appropriate locations can also contribute to affordability and economic aims.

However, mixed-use developments cannot apply in all precincts. Allowing for too much development of typical mixed-use typologies, particularly in areas outside of centres or ad-hoc locations, risks creating empty ground floor shopfronts and undermining the centres hierarchy. Sufficient floorspace for non-residential uses should be planned for and delivered in centres, based on a detailed understanding of likely demand, whether through land release, redevelopment or planning controls.

Existing capacity for more density around centres in the right places

Areas close to centres are the logical location for higher density housing and development to be concentrated. Housing densities around several centres are likely lower than they should be given the centres hierarchy designation and the policy aspiration for a compact city. More variety in housing types in the core of centres and adjacent areas can provide more choice for different households and help address issues with housing diversity and affordability. There will be opportunities for increased development densities to be delivered in key corridors and centres where it is most suited and, importantly,

aligned with public transport investment. The type and character of housing should be aligned with its relative access to amenities and transport, recognising that new investment in facilities and transport, and 'urban improvement' initiatives can help deliver the conditions for 'density with amenity'.

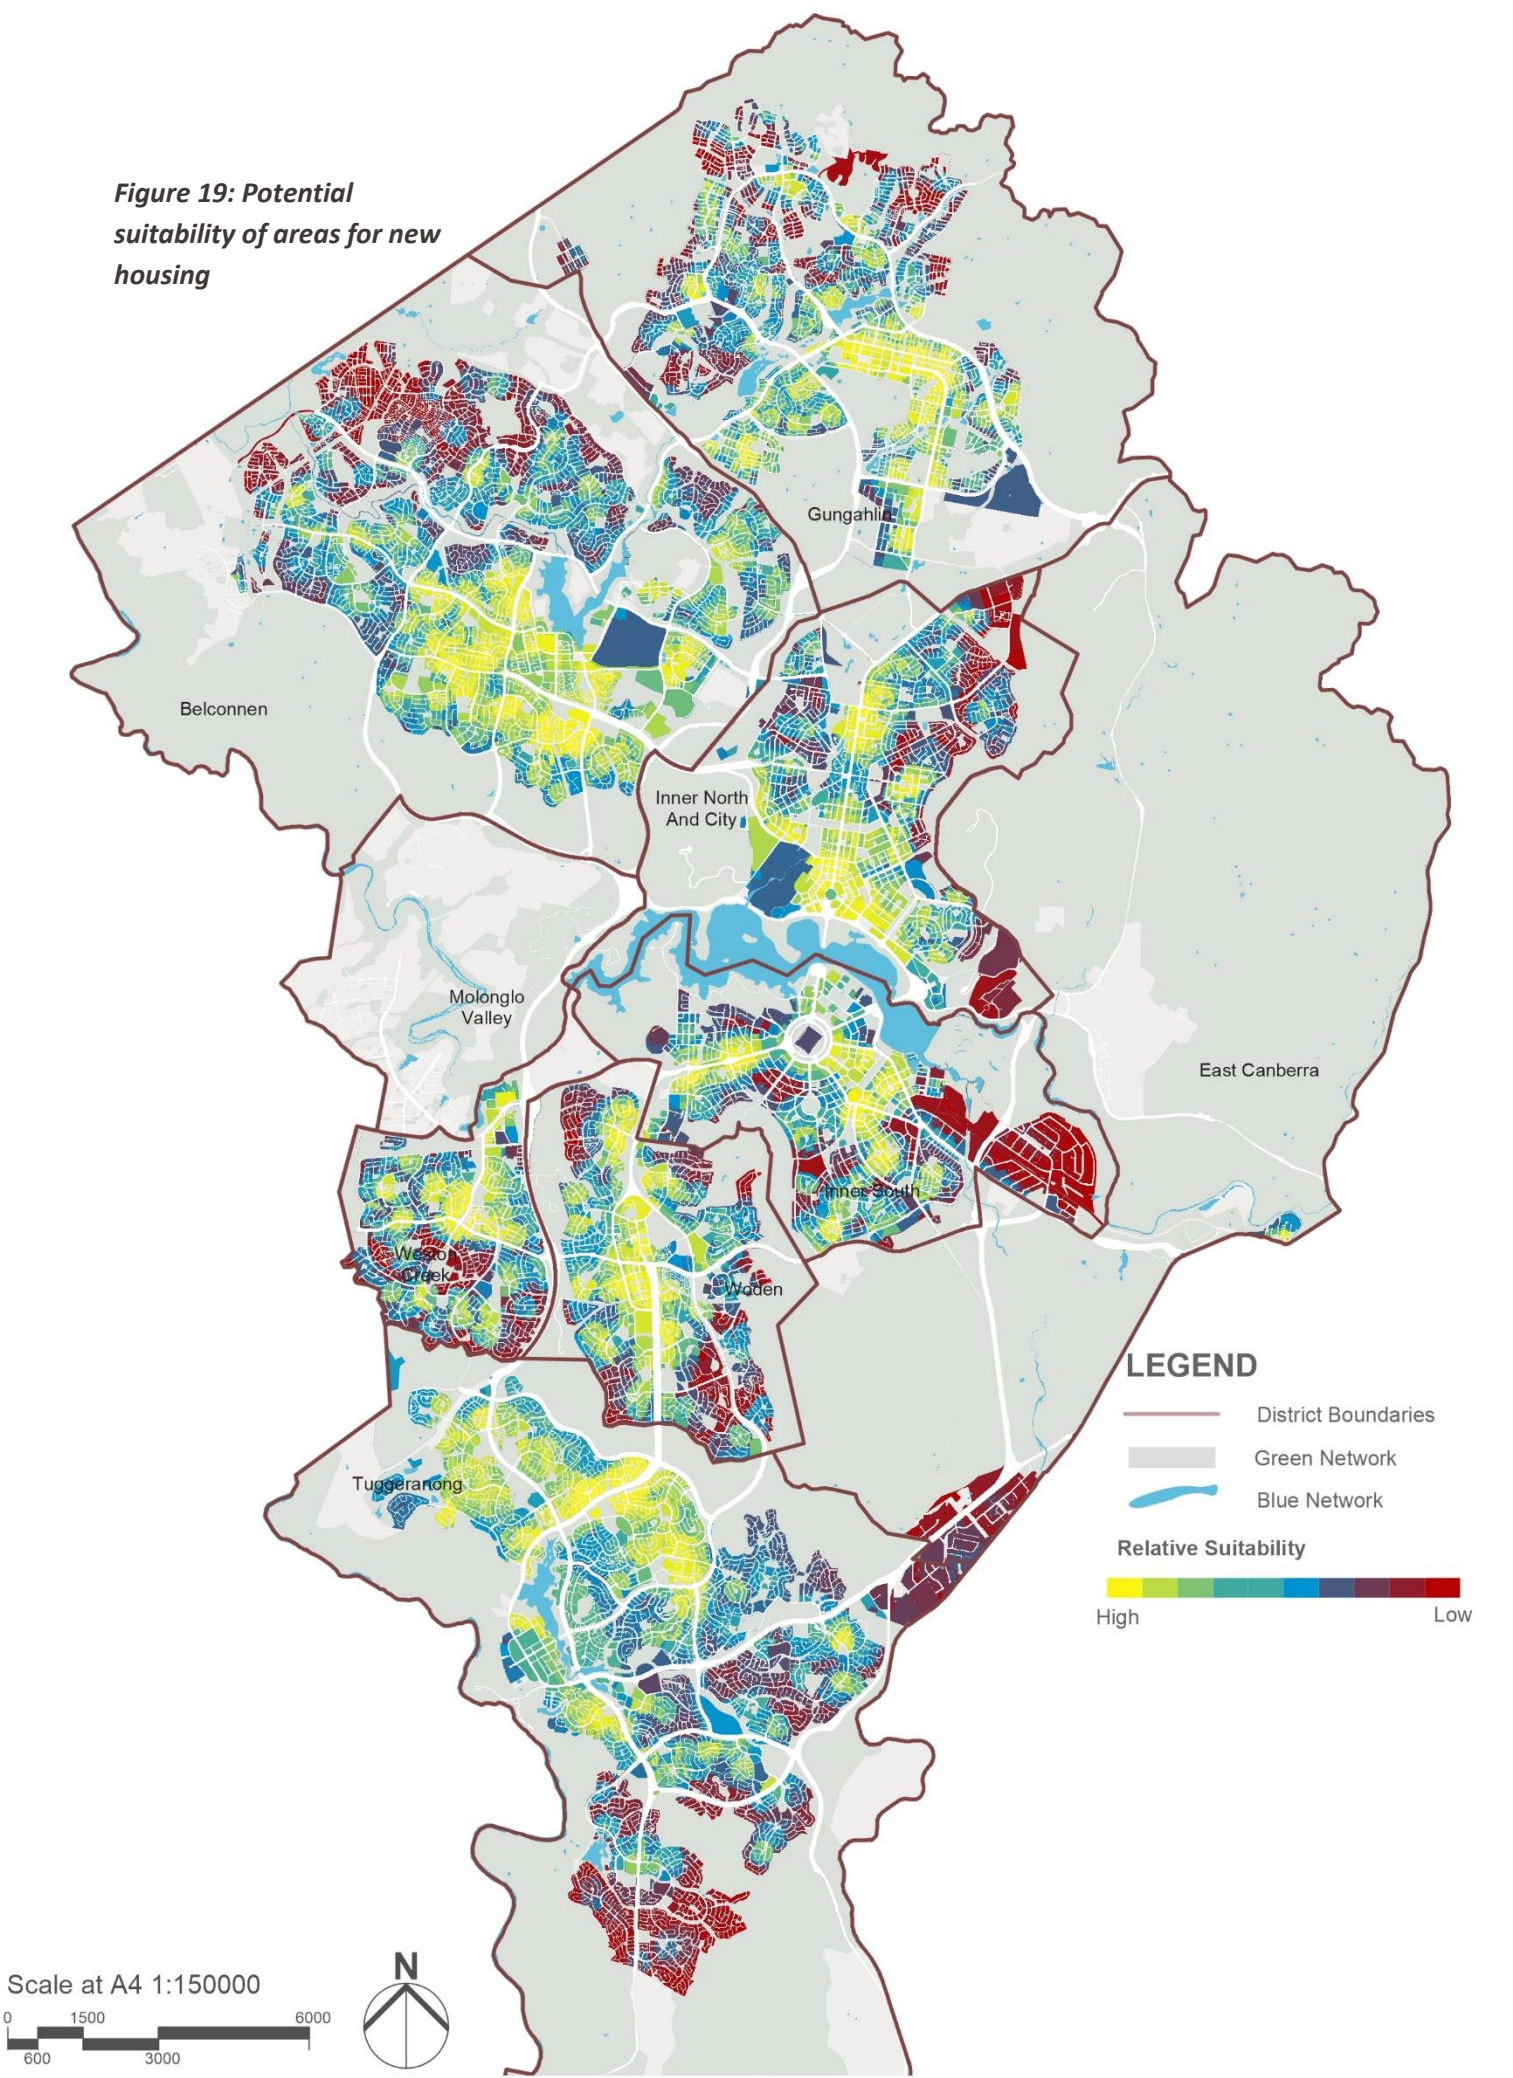

Suitability for new housing

Future development and new homes are best located in the **most liveable and well-serviced locations within Canberra's footprint**, consistent with good planning principles. To inform this, mapping of liveability indicators has been undertaken, including:

- canopy coverage
- blue infrastructure
- vegetation
- heritage
- land use
- slope analysis
- street hierarchy
- public versus private land ownership
- public transport networks
- active travel networks
- key cycle routes
- community assets
- dwelling density
- urban form typologies
- open space typologies and associated catchments
- the City Centre and town, group and local centres and associated catchments
- transport corridor networks and catchments.

This mapping also reflects macro indicators such as access to employment, health, schools, community facilities and public transport. These indicators are combined into the 'suitability' map for new housing shown in Figure 19, with the highest suitability shown in yellow and the lowest in red.

Figure 19: Potential suitability of areas for new housing

Future investigation areas

The suitability mapping was combined with an urban character analysis to identify **future investigation areas** for housing and accompanying development in each district. Section 5 outlines the extent of these areas, based on the top 25% of suitability across the ACT, with the anticipated urban character of these areas shown in more detail in the subsequent mapping.

Note: heritage and environmental values in these areas will be protected from future development investigation.

Urban character analysis

The urban character classifications not only focus on appropriate housing types given the context, but also on appropriate types of open spaces, parks, streets, amenities, facilities and services.

When applied in urban planning and design, a transect is a line or section through a city showing changes in types of urban environments. An **urban transect** is generally at its most compact and dense in the City Centre and steps down through the built form as it moves further to the urban edge – examples of this are provided in Appendix 1.

The six urban character types of the ‘rural to urban transect’ are typically described as follows:

- Natural, defined by a wilderness condition including lands unsuitable for settlement (T1)
- Rural, defined by sparse settlement, cultivation and agricultural lands with supportive buildings (T2)
- Suburban, defined by low-density residential areas with naturalistic planting (T3)
- General Urban, defined by a mixed use but primarily residential urban fabric (T4)
- Urban Centre, defined by higher density mixed-use buildings (T5)

- Urban Core, defined by highest density and height with the greatest variety of uses (T6).

Only the Suburban, General Urban, Urban Centre and Urban Core character types (T3 to T6) are used to describe the anticipated urban environment in each district.

In summary:

The suitability mapping identifies areas *that have the characteristics to accommodate future additional housing development* – shown as **future investigation areas**.

The transect mapping identifies *what built environment typology is appropriate* in these areas – shown through **urban character types**.

More detail on transect thinking and a series of urban design principles for each of the four urban character types is provided in Appendix 1.

The future investigation areas will be refined and updated in future versions of the district strategies to reflect implications from the results of the 2021 Census, revised population projections and the application of the urban transect thinking in more detailed planning.

The locations that are currently shown as future investigation areas may not ultimately be required to meet projected housing demand in each district.

Note: The **urban character types** are not the same as and are not intended to replace the land use zones in the Territory Plan. Their application in each district and how they would inform changes to zoning requires further analysis, including established character, heritage sites and values, environmentally sensitive areas and natural hazards such as bushfire risk.

Rapid stop-to-centre connection areas

The mapping for the sustainable neighbourhood driver shows areas connecting rapid and light rail stops to group and local centres. These highlight where a centre is not directly serviced by a rapid or light rail alignment but could be better connected by careful placement of stops or by appropriate development linking to existing stops. The area between and around the stop and centre represents an opportunity for additional housing consistent with public transport-oriented development principles (and the objectives outlined below).

As the future investigation areas are considered in detail, the prospects for developing the rapid and light rail stop-to-centre connection areas will be considered (noting that future alignments are subject to change and further investigation). The presence of these opportunity areas would be a consideration in identifying preferred pockets for additional development and density within the investigation areas. Within the opportunity areas, appropriate urban character types would be identified.

As with the future investigation areas, not all these stop-to-centre connection areas are expected to be required to meet projected housing demand. They will be considered systematically and 'turned on' for more detailed planning as a result of the future investigation area analysis.

Other future development areas

In each district, various locations are either identified to accommodate future residents and where planning is already underway, or are flagged as possible or potential sites for development.

These sites are categorised in the district strategy and other district-specific maps to reflect:

- **proposed change areas** – areas for which there is confirmed future development or well-progressed proposals
- **possible change areas** – areas which are subject to current proposals and/or require further investigation
- **potential future change areas** – areas that may be considered for future development in the long term but which require further investigation, analysis and feedback.

Indicative structure planning ideas and principles for selected key sites in the above categories of change area are included in Section 5, following the discussion of initiatives under each of the five drivers.

Public domain

The public domain is the framework of communal social life. It forms the setting for public events and accommodates daily needs, social exchange and gathering and casual socialisation, and active recreation.

The distinct character or feeling of a place is most keenly appreciated in the layout of streets, parks and public places as a network and in the detail of public places. Both public and private buildings have the responsibility to frame the city's public spaces in a manner that supports a convivial and engaging social life for people.

In general terms Canberrans have access to a lot of public space. However, there may be opportunities for public space to be enhanced and catalysed on, including being activated and upgraded to align additional density with enhanced local amenity. Local public domain connectivity and quality is poor in many locations. Planning at the district level highlights opportunities to create new connections while delivering complementary living infrastructure initiatives to address urban heat and contribute to canopy cover and permeable surface targets. Better quality can be generated in tandem with new development in selected locations.

Aligned with the other elements, there may be new opportunities to increase walking and cycling in the post-COVID environment; more localised living provides support for an expansion of active travel, including more walking and cycling to access local jobs, services and amenities.

Sustainable transport and walkability

Australians are becoming amongst the most unfit, obese and inactive citizens on the planet. Recent studies suggest this derives, at least in part, from low-density cities creating a primary dependency on cars to move about our cities and landscapes.

Canberra should strive to encourage movement across diverse travel modes, always underscored by links to public transport including light rail. New development and revitalised areas should prioritise contemporary sustainability considerations, including layouts and ways of movement that encourage walking and cycling while continuing to provide efficient, but not excessive, means for private transport.

Design quality

Design quality needs to be a primary consideration of planning as it contributes to a broad variety of benefits, including:

- making places where people want to be
- designing in opportunities for physical activity
- enhancing landscapes and microclimates
- creating low energy and water use buildings.

Particularly in the Inner North and City and Inner South districts and other designated areas across Canberra, design considerations should reflect and contribute to the aims and ideals of the National Capital Plan, building on the blueprint for Canberra in the original Griffin plan and the ongoing work of the National Capital Design Review Panel.

Contribution to zero carbon

New development has to make an ‘oversize’ contribution to lowering carbon emissions given the constraints to retrofitting the existing housing stock.

In addition to major existing initiatives and commitments announced by the ACT Government, new development can make the most significant contribution to lowering emissions through waste management and facilitating the shift to zero emissions vehicles. Where scale and yields allow, precinct-based approaches to zero carbon are enabled and will have the biggest impact; incremental change should also be expected as individual or clusters of new dwellings are developed.

Achieving zero carbon will require a major transition in the ACT’s energy systems, shifting transport to zero emissions energy such as renewable electricity and phasing out fossil-fuel gas. This will require upgrades to our electricity system; for example, the deployment of battery storage systems within homes, neighbourhoods and at strategic electrical infrastructure nodes. Our buildings and homes, both new and existing, will need to adapt, for example through the installation of zero emissions vehicle chargers.

Natural hazards

New development will also need to contribute towards mitigating risks from natural hazards, the frequency and intensity of which are likely to increase with climate change.

Natural disasters have an enormous impact on people, the environment and communities. While the ACT has low incidences of emergencies and natural disasters compared to other cities in Australia, a growing ACT population, changing urban landscape and impacts of climate change all contribute to an evolving risk environment.

This makes it essential to understand and mitigate against the likelihood and consequence of the natural and other hazards we face as a community.

As the bush capital, Canberra faces risks, particularly from bushfires, which need to be factored into how the city develops, particularly in greenfield areas. The ACT has a wide variety of vegetation types, including grasslands, dry and wet forests, woodlands, pine forests, bogs and fens. Vegetation in urban areas also impacts on fire behaviour, with suburban fuels (including landscaping and garden beds) a key contributor to bushfires encroaching into urban areas. Significant portions of the nine districts are bushfire prone land, as shown in Figure 20.

Figure 20: Bushfire prone land in our districts

Source: ACTmapi.

As well as bushfires, the ACT is at potentially at risk from a range of hazards. Those of highest risk include heatwaves, severe storms, bio-security emergencies, disruptions to energy supply, flash flooding and incidents with hazardous materials. The ACT Government has existing policies which will be considered and integrated in the planning for new development across our districts, including:

- ACT Emergencies Plan
- Strategic Bushfire Management Plan 2019–2024
- The Territory Wide Risk Assessment 2017
- Climate Change Risk Assessment.

Affordability

Global best practice is to incorporate affordable housing in new projects. London has a 35% contribution requirement for developments that seek to be ‘fast tracked’.

Approximately 23% of Canberra’s rental households have been estimated to be in housing stress as of 2021. This stress will increase as house prices and rents rise and other costs of living increase. Without meaningful additions to new social and affordable housing across the ACT economic productivity will be affected as labour market depth is eroded (because workers can’t access affordable shelter) and public resources are diverted to address social and health impacts (of homelessness and household stress).

Under the ACT Housing Strategy, the ACT Government dedicates at least 15% of new residential land releases each year to affordable, community and public housing. In addition, investigations are underway into planning and design provisions that encourage the supply of affordable housing.

The ACT Government has released a Build-to-Rent Investment Prospectus, outlining plans to encourage more long-term rental developments in the ACT and to provide financial support for affordable rental proposals.

Table 6: Objectives for district planning – sustainable neighbourhoods

Alignment to Planning Strategy themes	Objectives
1 4 5	<p>Locate density with amenity in and around centres – Increase housing densities in and around centres (where supported by amenity attributes such as opposite parks, on tree-lined streets and lakefronts) and near or able to be connected to rapid transit stops. Include greater density and variety in housing types in the core and adjacent areas.</p>
2 4	<p>Strive for mixed-use precincts and centres – Provide floorspace for non-residential uses on the ground floor integrated with residential in planned precincts in centres as appropriate and where evidence for the floorspace warrants.</p>
3 4 5	<p>Improve the urban environment – Where additional density is proposed, work with development proponents to:</p> <ul style="list-style-type: none"> • leverage, activate and upgrade open space to enhance public domain • enhance the civic amenity of centres with new squares and/or new community buildings • modify and expand existing street networks to improve walkable access to centres • protect and restore open space areas and corridors, or create new open space connections, to fill gaps and enhance ecological sustainability in the blue-green network.
5	<p>Improve street walkability – Improve street walkability, particularly in greenfield and urban renewal or redevelopment contexts, through interventions that establish walkable block lengths and areas.</p>
3	<p>Address urban heat – Counter the urban heat island effect and prescribe deep soil landscape and urban tree canopy requirements in public space and within developments.</p>
3	<p>Water sensitive urban design (WSUD) – Implement WSUD in all major developments to improve stormwater quality, reduce peak run-off into local waterways and improve surface permeability.</p>

4

Require better design quality – Build on the work of the National Capital Design Review Panel, require higher standards of design including the adoption of design standards focussed on achieving:

- memorable urban character – parks, squares, streets and infrastructure
- public domain interface – contribute to the activation of public space
- architectural character – contribute to the spatial definition of public space, essential for all buildings of scale (above two storeys in height)
- housing quality – improve the liveability of housing at higher densities.

3

Provide infrastructure to support zero carbon transition – All major site developments to provide infrastructure to support zero carbon transition, including precinct-based initiatives where yields and scale warrant.

3 4

Require focus on risk mitigation of natural hazards – Require planning for new development across districts to contribute toward mitigation of risks of natural hazards including bushfires, including alignment with existing ACT Government policies and risk assessments.

4

Affordable housing – Continue to dedicate at least 15% of new residential land releases each year to affordable, community and public housing, and investigate planning and design provisions that encourage the supply of affordable housing.

Inclusive centres and communities

All residents in Canberra should be able to walk to a group or local centre where they feel welcome and safe and can find basic goods for day-to-day living.

Communities that are not subject to new development and growth or those with centres that are declining should not be 'left behind'. Selected group and local centres, including some in communities where socio-economic indicators are below the Canberra average, will be candidates for interventions or new investment to drive positive change and revitalisation.

Planning for and provision of community infrastructure will support new development and aim to address areas with lower-than-average socio-economic outcomes, with a focus on strengthening centres as hubs for community life.

LEGEND

Economic Precincts

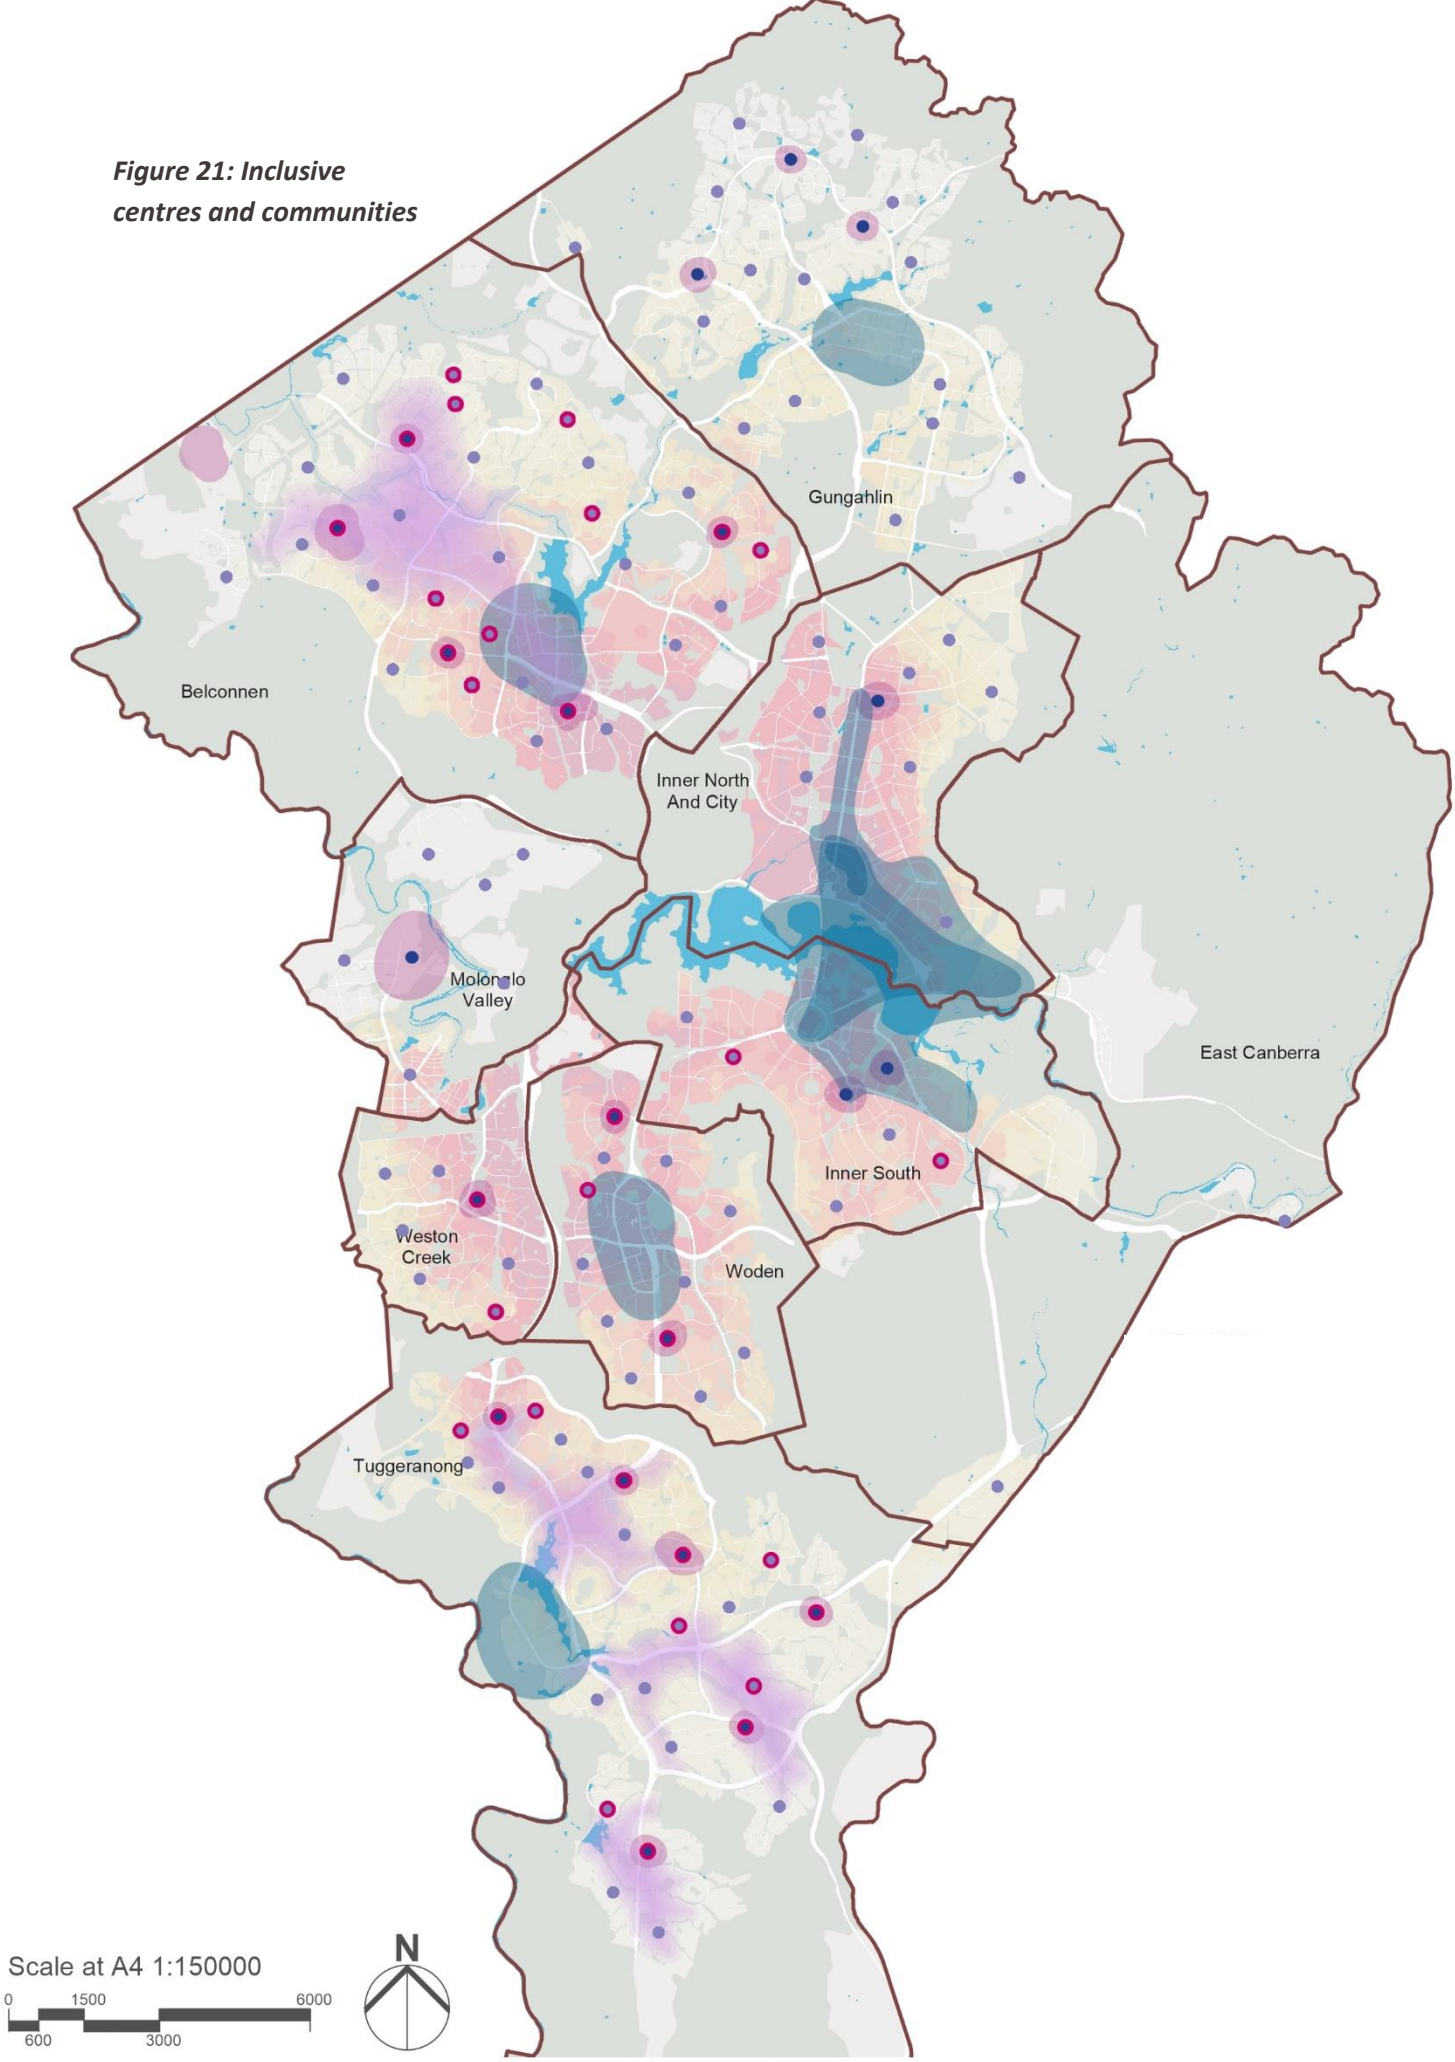

Relative Access to Community Facilities

Categories: Arts and Cultural, Health, Education, Community, Recreation and Sport

Social and community focus areas: areas with socio-economic indicators lower than the Canberra average, where targeted centres will be a particular focus for intervention, new investment and revitalisation.

Figure 21: Inclusive centres and communities

Areas with fewer growth prospects should not be left behind

Pockets of suburban Canberra contain communities where socio-economic indicators are below the city average. This is shown in mapping of the 'SEIFA index' (see Figure 22), which shows such areas in, for example, parts of Tuggeranong and northern and western Belconnen. Lower than average socio-economic outcomes in these areas may be compounded by poor access to employment opportunities.

Sometimes these areas have fewer amenities and attributes that would typically attract new development, which when 'done well' brings benefits in activation, upgraded public areas and new shops and facilities. There is a risk that without opportunities for new development and planning attention, some communities and the local centres they contain will be neglected or left behind.

Ongoing viability of group and local centres

The intended primary function of group and local centres is to meet convenience-shopping needs and provide community and business services to meet the daily needs of neighbourhoods. Group and local centres have an important social role as an informal meeting place and a transport role in being accessible by active travel, contributing to healthy and sustainable living. While some centres are functioning well, and many have seen increased popularity through the COVID-19 pandemic with more people working from home and taking advantage of local shops and facilities, there has been a progressive decline in the economic role and physical condition of others.

Targeted support for stagnant or declining local centres and for communities with below average socio-economic indicators – social and community focus areas – is an important agenda in the district strategies.

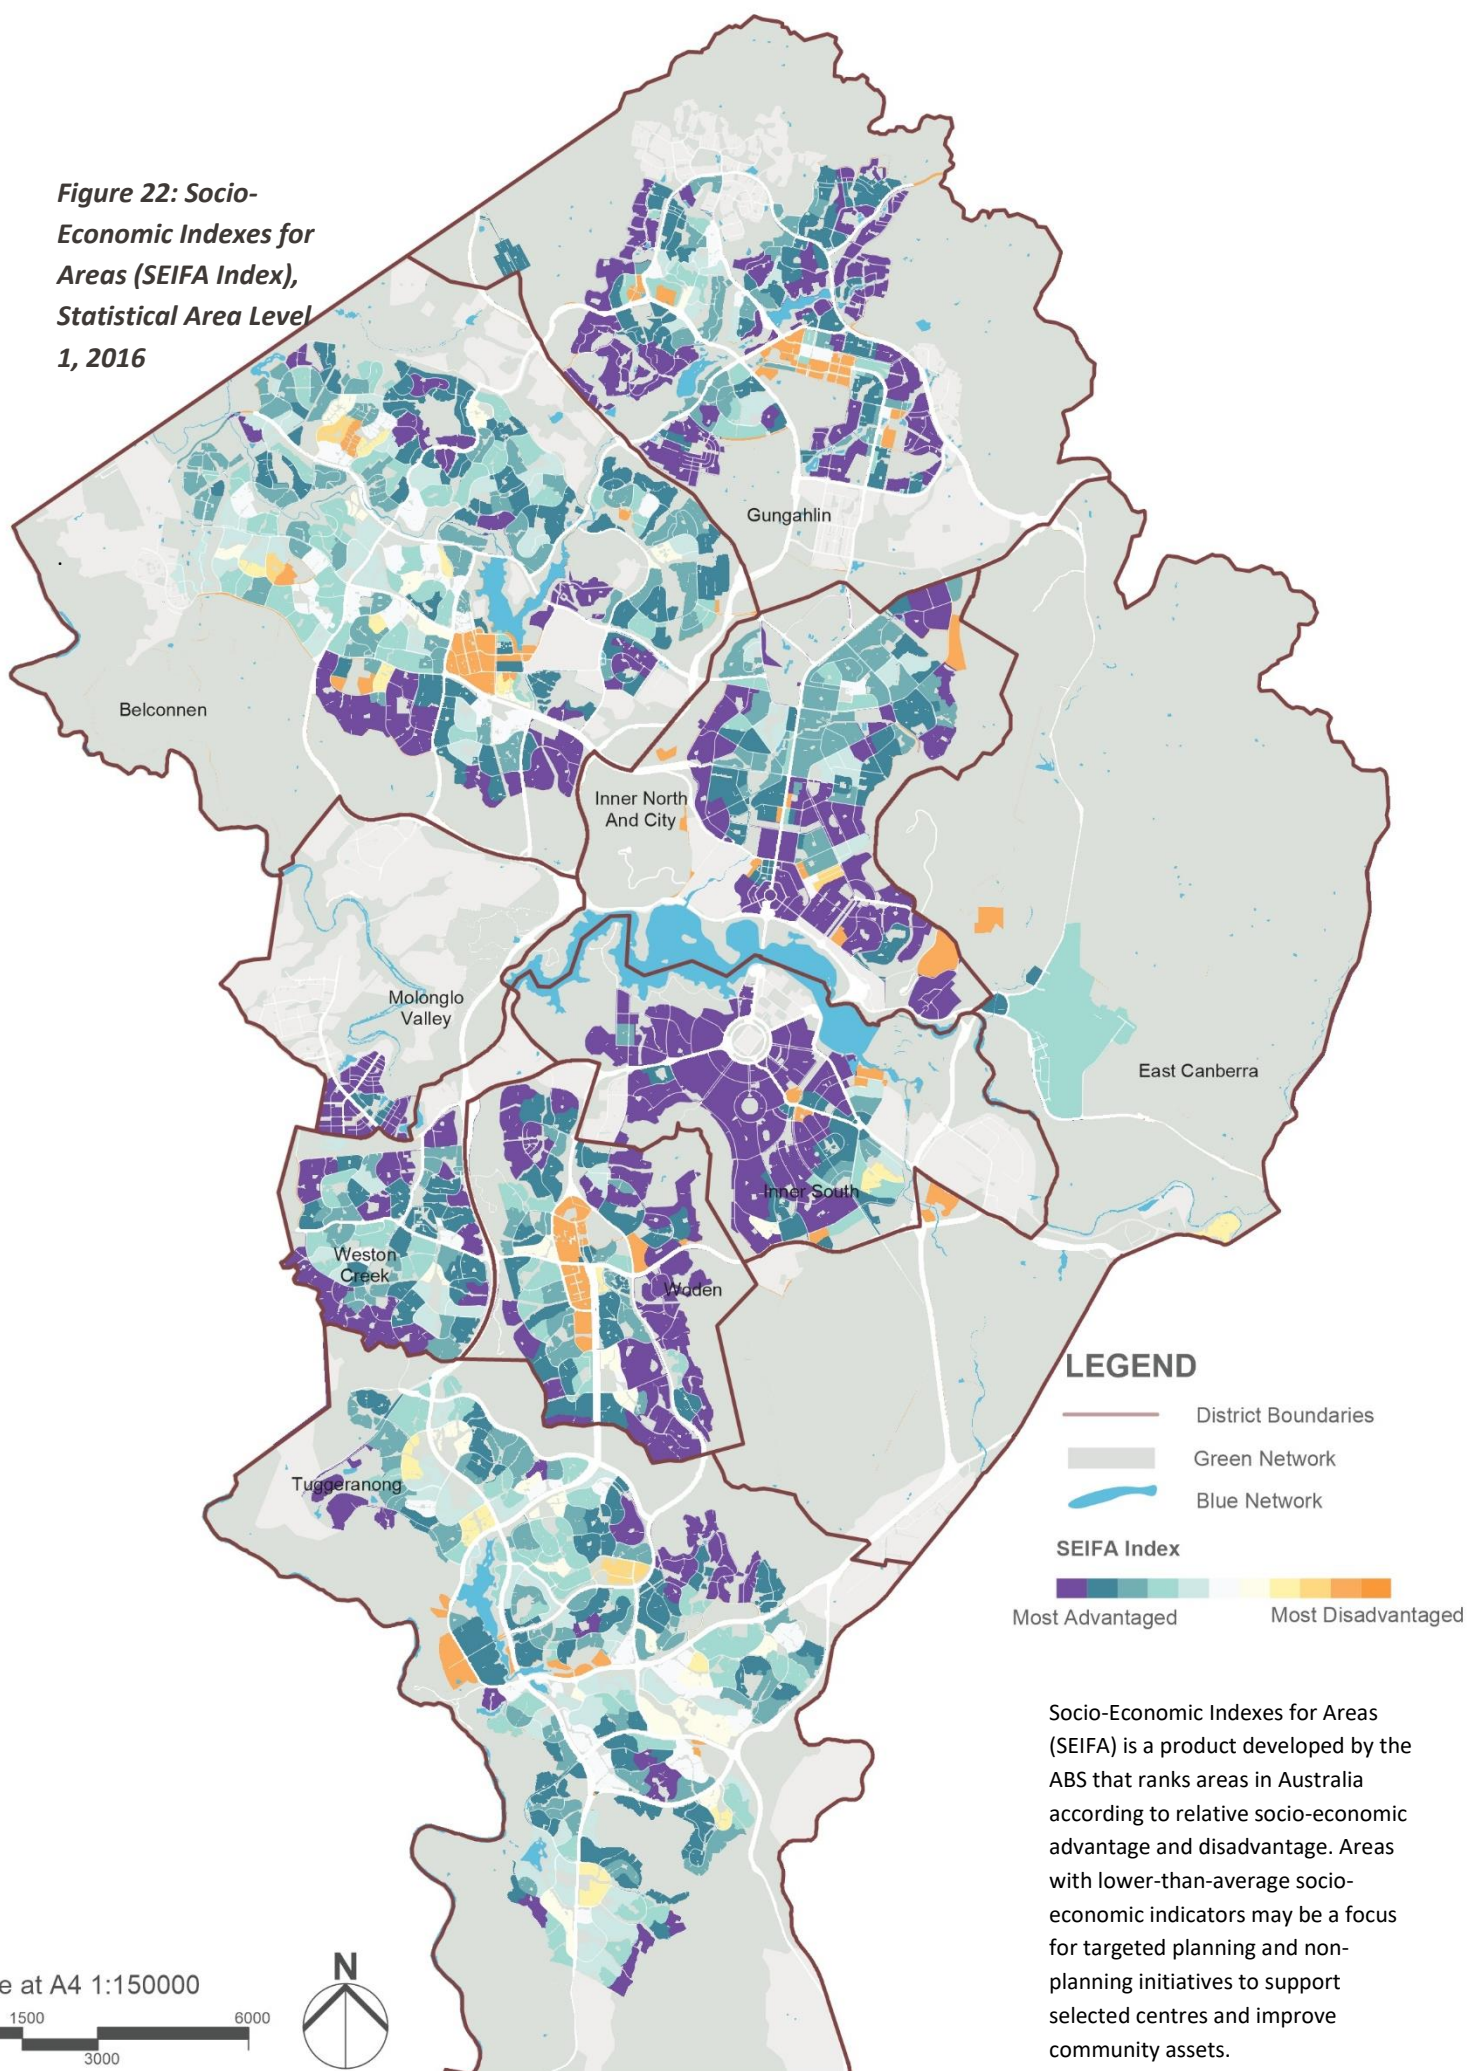

Group and local centre revitalisation

Only certain group and local centres with amenities and characteristics – such as good access by walking and cycling or public transport, an attractive mix of shops and proximity to open space – may attract new development. More often a declining centre will require an intervention or new investment to drive positive change and revitalisation. This might be an upgrade to a public area or nearby park, modifications to traffic access arrangements, investment in a new or upgraded community facility, installation or upgrading of a communal outdoor area within the centre or changes to planning controls to facilitate new investment and uses. The potential for investment should be informed by the identity of centres, including their built form, character, landscape setting, role and function, usage, and an assessment of community values through consultation.

Commitment to upgraded social and affordable housing

Some of the social and community focus areas with below average socio-economic indicators may also include precincts of social housing. Wherever these precincts are being redeveloped, it is expected that a net additional number of suitable new social housing dwellings would be provided.

Figure 22: Socio-Economic Indexes for Areas (SEIFA Index), Statistical Area Level 1, 2016

Community facilities should align with needs

Planning for community facilities is crucial to support the liveability of new and existing communities, alongside housing, employment and other land uses. Social infrastructure (such as schools, health facilities, libraries, arts and cultural facilities and general community spaces) should be considered as important as any other form of infrastructure. Early Childhood Education and Care (ECEC) will be a key component of education when considering the future community facility needs to each district in the ACT.

The provision of community facilities should reflect and 'keep pace' with changing requirements. This relates to servicing new development and addressing 'backlogs' or targeting communities in need. Different approaches may be needed in each case.

There is an emerging 'mismatch' in the distribution of community facilities with the population. While locating community facilities will depend on their nature and the populations they are serving, it is apparent there are significant 'dead zones' when it comes to community facilities. This indicates a lag in their provision in growth areas over recent decades. Figure 23 shows the relative access to community facilities (not including park assets). The areas where provision is generally deficient align somewhat with the communities where socio-economic indicators are below the Canberra average.

The importance of community facilities in the right locations

Community facilities should be in areas that are the most accessible (by different transport modes) and co-located with complementary uses to create community hubs. Typically, town and group centres should be priority locations for community facilities, consistent with the centres hierarchy directions in the ACT Planning Strategy. There is a wide range of facilities provided across

the ACT; however, in some cases these may not be in the best locations for accessibility. Areas with poorer access are aligned with those with lower socio-economic indicators, particularly the outer suburbs, reinforcing these areas as priorities for policy attention.

Changing trends in provision and delivery

Changes in society influence the types of facilities that communities need, such as changes in participation in different sports and physical activity, religious affiliation, the ageing of the population and other demographic changes. There is currently an uneven distribution in the number of facilities between districts, influenced by changes in the practice of providing new facilities and because of lags in provision to new communities. Adaptability is increasingly important for facilities to be able to respond to changes in demand.

Many challenges face the delivery of new or upgraded community facilities, particularly in established cities. Challenges include constrained land supply, capital costs and maintaining their viability. Different types of facilities have different operating models and challenges. Some types will be wholly provided by government, others by not-for-profit organisations or the private sector; some require large land areas, while others can be integrated with mixed-use buildings or co-located.

Provision of facilities needs to align with growth

To create robust and resilient local communities, the provision of community facilities needs to align with anticipated future population growth and changes in demographics. The emphasis on district-by-district housing futures provides a stronger platform for facilities planning and provision to service that community. Providing new community facilities presents the opportunity to diversify the types of uses in our centres and contribute to civic amenity, and sustainability aspirations through their design.

Figure 23: Relative accessibility of community facilities, 2022

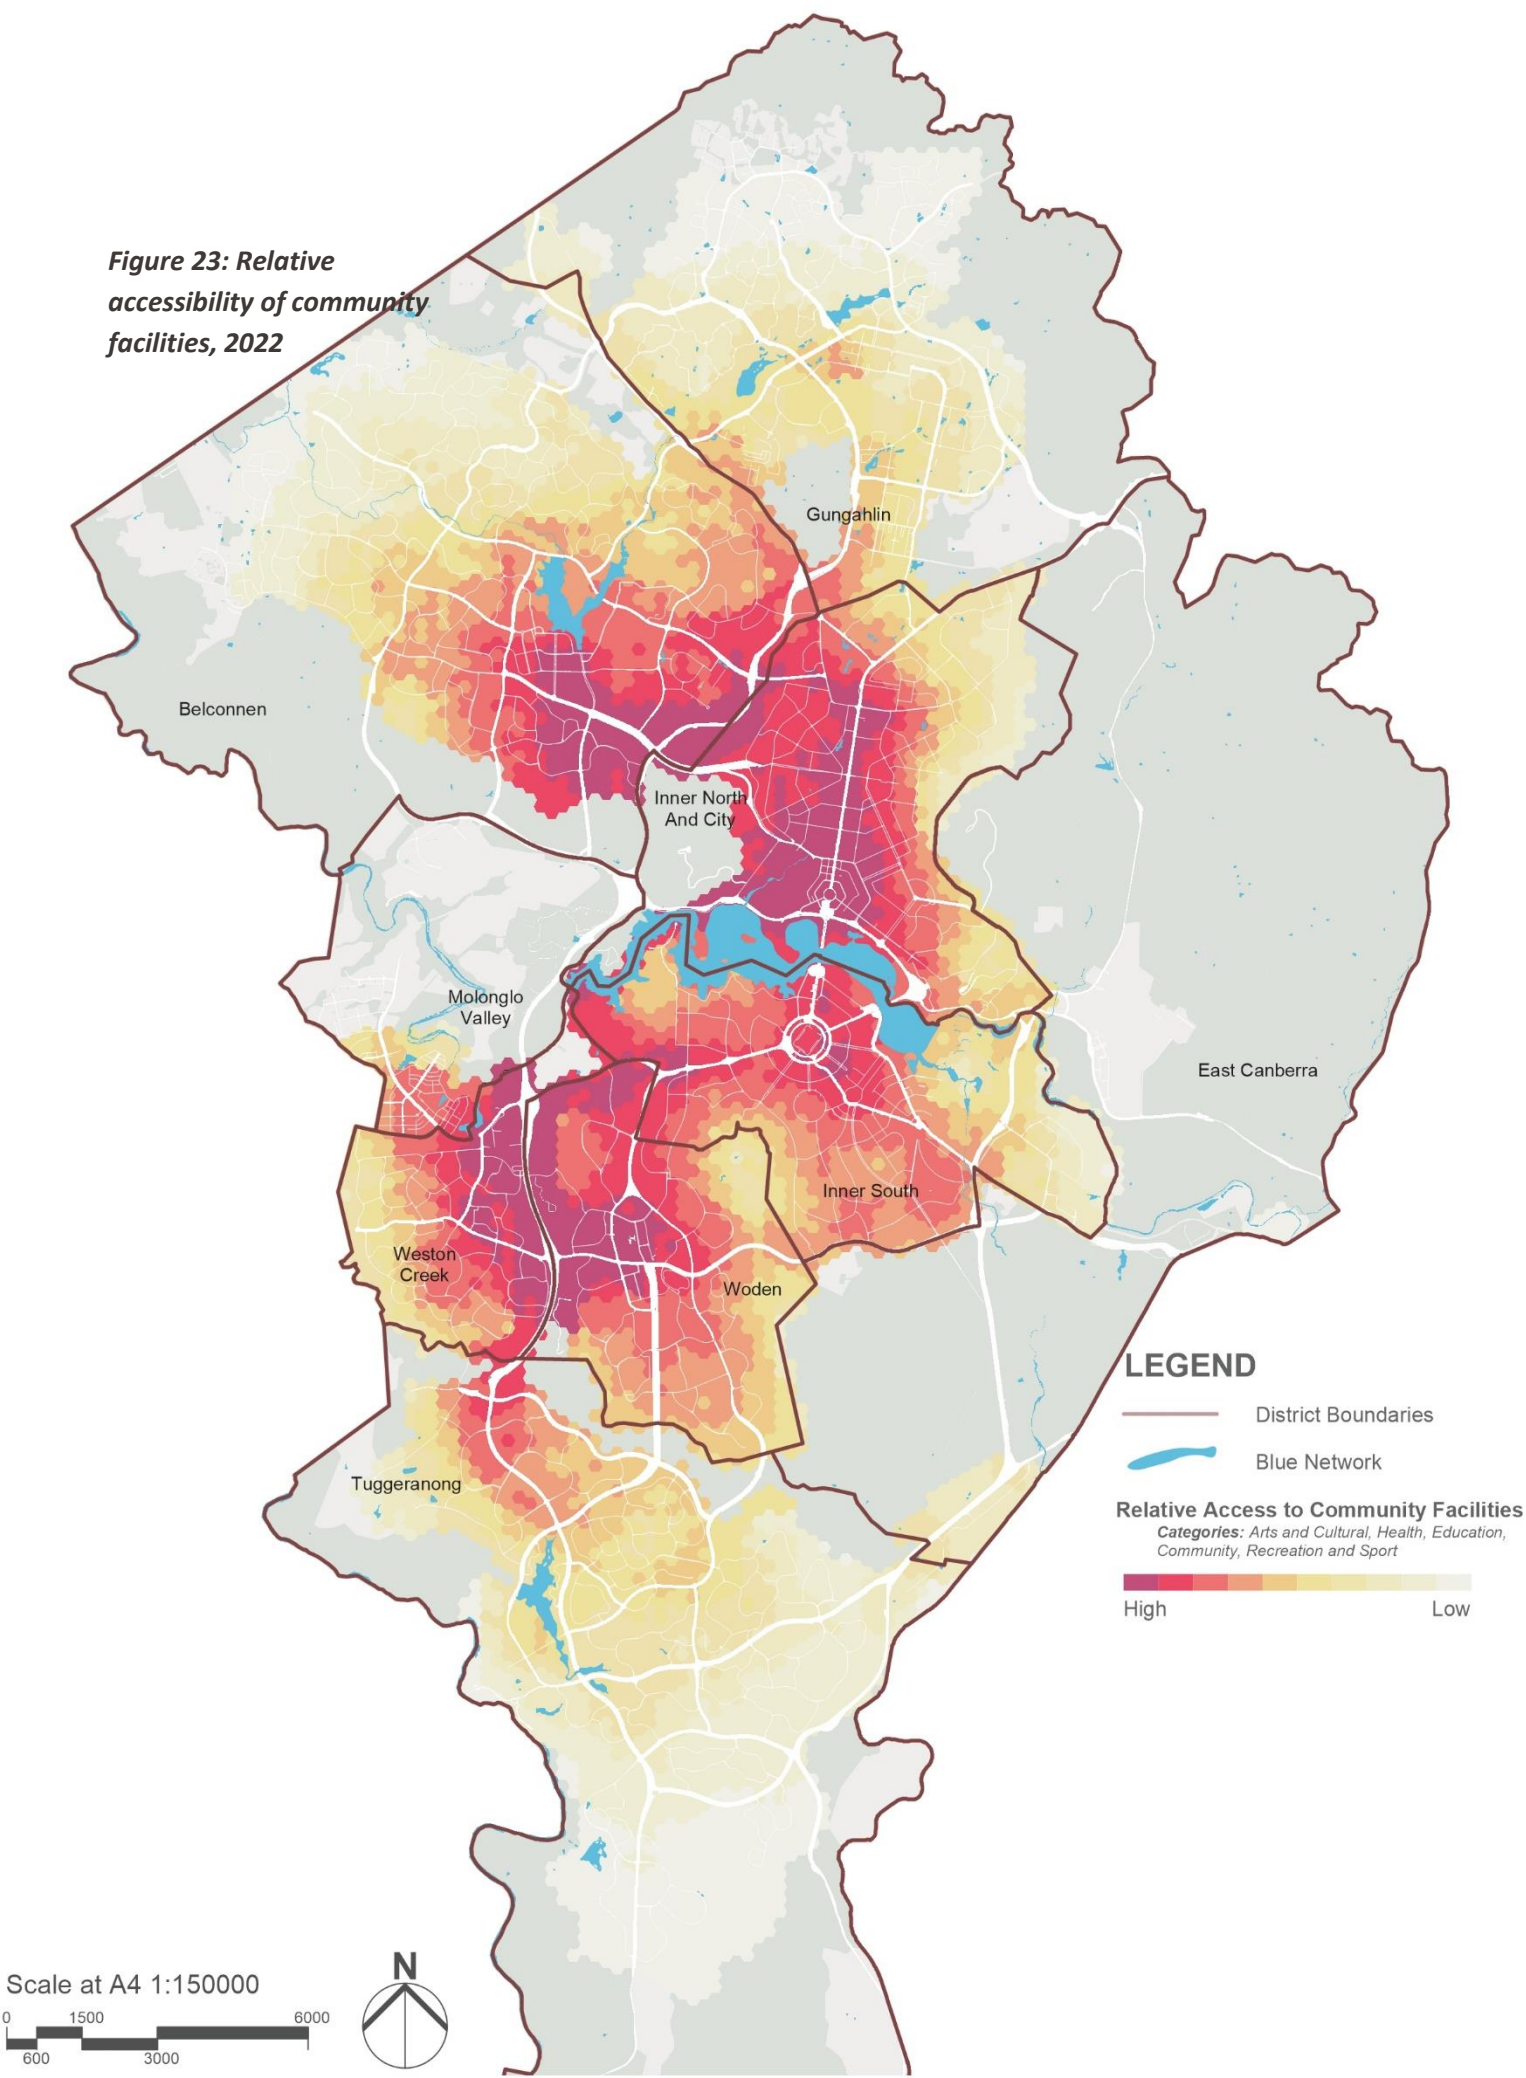

Table 7: Objectives for district planning – inclusive centres and communities

Alignment to Planning Strategy themes	Objectives
2 4 5	<p>Support the long-term viability and social role of group and local centres – Undertake targeted revitalisation initiatives in selected group and local centres that are at risk of decline to realise opportunities and address areas with below average social and economic indicators (social and community focus areas identified using the SEIFA index).</p>
4	<p>Provide social and affordable housing – Guarantee that, as a minimum, a net additional number of suitable new social housing dwellings is provided within a district when social housing precincts are redeveloped.</p>
1 4	<p>Align community facilities with planned growth in infill areas – Provide new community facilities in infill areas aligned with projected and planned population and housing growth.</p>
2 4 5	<p>Co-locate community facilities for efficiency and accessibility – Integrate and co-locate community facilities with complementary uses in centres and accessible locations, including transit stops, to foster the creation of community hubs, particularly around major facilities such as schools.</p>
4 5	<p>Provide community facilities as new communities are developed in greenfield areas – Provide new community facilities in accessible locations (planned centres) in all greenfield areas.</p>
3 4	<p>Align community facilities with sustainability – Locate and design new community facilities to contribute to the ACT's sustainability agenda, including in landscape design, tree plantings and energy efficiency.</p>

Targets

Establishing a realistic set of targets represents a commitment to implementing the district strategies. Not all the intent associated with the objectives behind the five big drivers is able to be measured. However, the 10 targets suggested in Table 8 have been crafted to encapsulate the main aims of the district strategies. The targets will be refined in future to become key considerations across the ACT Government and used in the measurement of progress in delivery.

The targets for ‘more nature and retaining water in the city’ in the table rely on achieving existing ACT Government plans and strategies. The remaining targets will – once identified – represent meaningful aspirations given current performance against the suggested metric and the amount of projected future development. Other targets not mentioned here also remain relevant, including net zero carbon and the 70% urban infill target.

Table 8: ACT-wide targets for planning

5 big drivers	Targets to 2046
Blue-green network	<p>More nature and retaining water in the city</p> <ul style="list-style-type: none"> ● Achieve the outcomes in the ACT Nature Conservation Act, ACT Nature Conservation Strategy, ACT Water Strategy, reserve management plans, the draft Mature Native Trees Action Plan, and the Living Infrastructure Plan, including urban tree canopy target (30% or equivalent) and surface permeability (30%). <p>Expand liveable blue-green network connections</p> <ul style="list-style-type: none"> ● Increase walking and cycling links integrated with the identified liveable green network corridors (e.g. by 80–120 kilometres; currently approximately 340 kilometres)
Economic access and opportunity across the city	<p>Improve economic opportunities in districts with a shortage of jobs</p> <ul style="list-style-type: none"> ● Increase the percentage of all Canberra jobs outside of Inner North and City, Inner South and East Canberra districts (e.g. 45–50% of all jobs; currently 40% in 2016 based on ABS 2016 Census). <p>More jobs accessible to home</p> <ul style="list-style-type: none"> ● Decrease in the average journey to work travel time (e.g. to 15–20 minutes; currently 27 minutes based on ACT Travel Survey 2017).
Strategic movement to support city growth	<p>Reduce car dependence</p> <ul style="list-style-type: none"> ● Increase share of journey to work trips by public transport by 2046 (e.g. to 10–15% of trips; currently 7.1% in 2016 based on ABS 2016 Census). <p>More active transport</p> <ul style="list-style-type: none"> ● Increase share of all trips by walking or cycling (e.g. 25–30% of trips; currently 16.9% in 2017 based on 2020 ACT Transport Strategy).
Sustainable neighbourhoods	<p>Expand walkable access to shops and services</p> <ul style="list-style-type: none"> ● Increase the share of all dwellings that are within a walkable catchment to a town centre (1,000m), group centre (800m) or local centre (400m) (e.g. 55–60%; currently approx. 52%). <p>More inclusive and fair communities</p> <ul style="list-style-type: none"> ● Increase the share of all dwellings that are social housing (e.g. 7–10%; currently 5.7% in 2021 based on occupied dwellings in ABS 2021 Census).
Inclusive centres and communities	<p>Greater activation of group and local centres</p> <ul style="list-style-type: none"> ● Increase the share of population serving jobs that are in local centres (e.g. to 25–30%; currently 23.7% based on ABS 2016 Census). <p>Improved community wellbeing</p> <ul style="list-style-type: none"> ● More than 8 in 10 Canberrans rate their personal wellbeing as either typical or high, in line with the ACT Wellbeing Framework.

4. Delivering the district strategies

Photo credit: ACT Government.

Implementation pathways for delivery

A range of actions will implement the initiatives and achieve the directions for the ACT's districts in the short, medium and long term.

This section describes 12 types of implementation pathways. These are referenced for each of the initiatives identified for each district in Section 5. **Future versions of the district strategies will provide more specific actions for implementation of proposed, potential and possible change areas, future investigation areas and supporting infrastructure.** Note: not all 12 pathways are necessary or will be applied in every district, and numbering is not a reflection of an order of priority.

1

Blue-green network conservation and expansion

The blue-green network is a foundational element of the district strategies. A key aim is to fill in gaps and connections in the primary, secondary and tertiary networks to enable people to move through and experience elements of the natural environment **where this is compatible with biodiversity and conservation values.**

Many elements of the blue-green network and heritage are protected by existing legislation. Initiatives and objectives for environmental and cultural heritage are set out in ACT Government policies. Key legislation and policy documents include the [Nature Conservation Act](#), ACT Nature Conservation Strategy, ACT Water Strategy, ACT Climate Change Strategy 2019–25, national park and nature reserve plans, the draft Mature Native Trees Action Plan, and Canberra's Living Infrastructure Plan: Cooling the City (2019). The ACT Government is also delivering initiatives to support and expand the blue-green network, including working with Ngannawal Traditional Custodians to care for Country. Blue-green network matters are also considered through the assessment and referral process for new developments.

Photo credit: ACT Government.

This first version of these district strategies covers a range of topics and elements. They have been developed based on currently available information.

Some areas will undergo further analysis, research and investigation to develop and refine the strategies for future updates and to inform other planning work. It is intended that the district strategies will be updated over time to reflect new information and remain relevant to Canberra as it develops.

Areas for future planning in the short term will include the following:

- **Planning for future employment** – Detailed studies and an ACT-wide strategy for employment lands and retail planning are crucial to informing both land-use planning decisions and economic development initiatives.
 - This will require updated modelling of employment futures and identification of employment floorspace needs, covering industrial, retail and commercial activities, visitor and tourist requirements, and distribution hubs.
- **Investigation area analysis and planning** – More detailed analysis of housing demand and future dwelling requirements with updated population projections will inform the refinement of the extent of the identified future investigation areas. These areas may be needed for future housing and will require accompanying infrastructure, including civil and community infrastructure, and other amenities to sustainably support their development.
 - This analysis will consider the full complement of 2021 Census data and be based on population projections and housing demand modelling. It will consider the existing pipeline of development and the identification of future change areas in determining what additional areas for housing are needed.
 - Refinement of the future investigation areas and identification of areas for future planning to accommodate additional housing will be based on:
 - the suitability and urban character analysis
 - opportunities to better connect rapid transit stops to group and local centres and focus development in the areas between and around these areas
 - the objectives identified for the five drivers in the district strategies as relevant.

The preliminary analysis suggests that Canberra has ample capacity for housing development well into the foreseeable future (beyond the horizon of these district strategies), supported by targeted infrastructure investment. Analysis included the suitability of areas for housing, the character types, existing distribution of density, potential of key sites within the established urban area and unconstrained greenfield development areas. In due course, it will be appropriate to reconsider the 70% urban infill target with a view to further constraining the outward expansion of the urban area.

Mitigating the impacts of natural hazards, particularly bushfires but also other risks, will be another crucial consideration to be factored into this planning, recognising that potential hazards vary between districts and between infill and greenfield development locations. Future planning will also consider the impacts and influences of surrounding areas in NSW, as well as any lasting impacts from the COVID-19 pandemic on work and travel behaviours.

3 Territory Plan

Many initiatives identified for each district will require some form of implementation through the statutory planning system and the Territory Plan.

Rezoning or other changes to the Territory Plan	Implementation via district policies	Changes to Territory Plan Policies
<p>Some sites or precincts may be rezoned or require other changes to planning controls to allow for particular land uses or built form outcomes in line with the district strategies.</p> <p>These changes can be implemented through changes to the Territory Plan.</p> <p>Changes to the Territory Plan are not to be inconsistent with the National Capital Plan.</p>	<p>The district policies will be a new part of the statutory planning system, replacing the existing structure plans, concept plans and precinct codes.</p> <p>Principles and controls that need to apply to a site beyond what is allowed under the zoning will be specified in the district policies. This will include specific sites identified in the district strategies.</p>	<p>Some initiatives may require adjustments to Territory Plan Policies, which apply across the ACT, such as the Subdivision Policy or Residential Zones Policy.</p> <p>Changes to these Policies may include provisions in some zones to facilitate outcomes in line with the objectives of the district strategies, such as controls in the RZ2 Suburban Core zone to support development typologies more reflective of that zone's Policy Outcomes.</p>

Changes implemented via the Territory Plan may include the rezoning of some areas to reflect the identified urban character types that have been derived from the suitability analysis in the district strategies. Appendix 1 includes a table that illustrates how the urban transect character types broadly align with the Policy Outcomes and land use zones in the Territory Plan (noting that the urban character types are not intended to replace the land use zones in the Territory Plan).

EPSDD will have primary responsibility for implementing these changes through the statutory system and the development assessment (DA) process, working with referral agencies and consulting with the community and development proponents to make sure the best outcomes are achieved and that new developments adequately reflect the vision and directions outlined for each district in the district strategies.

4 Transport and land use integration

The integration of transport infrastructure with land uses is a fundamental part of the thinking that has gone into the preparation of the district strategies. Major infrastructure, like future light rail corridors and the rapid bus network, provide significant opportunities for land use change.

This can help reinforce and capitalise on the ACT's multi-centred structure, align new development with improvements to accessibility and, in turn, contribute to our city's liveability and sustainability.

Integrating transport and land use will require strong and ongoing collaboration between ACT

Government directorates to realise the full benefits of major transport investments. Responsibilities for different elements of planning and delivery rest with different areas. Future planning for transport and land use integration will see ongoing collaboration particularly between EPSDD, Transport Canberra and City Services (TCCS), Major Projects Canberra (MPC), Suburban Land Agency (SLA) and City Renewal Authority (CRA).

Future government plans and strategies will continue to consider land use and transport issues together, rather than in isolation. Future versions of the district strategies will reflect new policies and plans as they are developed, such as the draft Active Travel Plan, alongside existing strategies (such as Building an Integrated Transport Network – Freight and the 2020 Transport Strategy) and future planning for the extension of the light rail network. Integrating transport and land-use planning will also need to address issues around the infrastructure and logistics needed to support 'last kilometre' journeys for freight in suburban areas as well as freight access and capacity in and around existing industrial hubs. In some districts 'strategic investigation corridors' are identified. These corridors might support future rapid transport links and a stronger network of connections to and between activity nodes. Future analysis would confirm their role and viability as extensions to the strategic movement network.

Complementary policies and plans are currently being developed to implement the ACT Transport Strategy 2020, and future iterations of the District Strategies prepared by EPSDD will also need to reflect these plans.

5 Employment and economic focus areas

The strategies identify centres or locations across the districts as focus areas for enhanced economic development and employment outcomes, including the City Centre and town centres which act as major employment bases in each district. Selected group centres also require attention to address the existing spatial imbalance in the location of jobs across Canberra.

These focus areas will require more detailed analysis and planning to understand and inform their future capacity for employment and residential floorspace, planning for both mixed-use and single-use formats. Diversity and mixed use are critical to centre success but planning needs to carefully curate these outcomes to appropriately balance residential and non-residential uses (or higher value residential uses will dominate). This detailed planning should consider elements important to 'place' such as transport connections, public domain and infrastructure, reflecting the district planning objectives in Section 3, particularly those for the economic access and opportunity driver.

The more detailed planning should also focus on economic development, aligning with the strengths of each centre and the district as a whole, the centres hierarchy, and the broader strategic aims for employment across Canberra and the region. This planning work may be led by EPSDD, but will require close collaboration with SLA, CRA, TCCS and Chief Minister, Treasury and Economic Development Directorate (CMTEDD).

Innovation precincts have different definitions and forms. They generally refer to specific geographic areas where industry, research and education institutions and other organisations such as start-ups cluster together and build on proximity to each other. Potential benefits from these types of precincts include contribution to growth and diversification of the economy, better collaboration between different sectors, and opportunities to leverage investment in institutional assets.

Factors in the success of innovation precincts include:

- quality of place and a physical environment that is walkable and amenable
- being a precinct that is diverse and inclusive and provides broad opportunities
- the affordability of premises
- having a critical mass of related enterprises
- having necessary information technology infrastructure to support firms and attract others
- being highly accessible
- having anchor enterprises or institutions that are engaged with industry
- having a competitive advantage – leveraging distinctive assets
- having an open and democratic operating environment that promotes collaboration, including shared or collaborative spaces
- having governance arrangements that nurture the precinct’s vision and its long-term economic development objectives.

Figure 24: Success factors for innovation precincts

Source: *Unlocking Enterprise in a Changing Economy*, Victorian Department of Environment, Land, Water and Planning, 2018.

Some of these factors are physical and can be facilitated through the planning system, such as through land use zoning, permissible uses and other planning controls. Successful innovation precincts require both physical and non-physical initiatives, including sustained and ongoing effort and collaboration between governments and the private sector.

The district strategies identify initial potential innovation precincts in the Belconnen and Inner North and City districts (see Figure 14) that build on specific assets already present in these districts. To make the most of these opportunities, strong collaboration will be required between the ACT Government and industry, and between directorates (EPSDD, CMTEDD and others) to establish and support the development of these precincts. It will be important to identify the needs and challenges facing the specific sectors in these precincts, and for the precincts to have clear purposes and goals.

7 Selected group and local centres revitalisation

Targeted planning and non-planning initiatives to support declining group and local centres is an important element of the district strategies. EPSDD will undertake a review of group and local centres to inform a group centre revitalisation program and a local centre revitalisation program respectively. The district strategies identify some of these centres in different districts, flagging them for possible revitalisation. Criteria to identify centres will include:

- capitalising on planned investments, community needs and considering economic and housing context to determine where work should be prioritised
- potential based on proximity to infrastructure, retail analysis and needs, and the distribution of services to help us figure out which ones are looked at first.

There should also be a focus on areas in relatively disadvantaged communities (the social and community focus areas identified by having below ACT average social and economic indicators as reported by the SEIFA index). **A program of interventions to help drive revitalisation and positive change may include:**

- upgrades to open space
- improvements to local traffic and transport arrangements
- new or upgraded community facilities
- changes to planning controls to support new investment and types of uses, including additional retailing and opportunities for employment.

Selected group centres have also been identified for an economic and employment focus and this will be part of the revitalisation agenda for these centres. As with the integrated infrastructure planning pathway, delivering these initiatives will require collaboration across the ACT Government and with the community.

8 City making and ‘urban improvement’ through precinct and key site development

Planning for proposed, potential and possible change areas will be based on the objectives established in these district strategies. Development in these precincts and other key sites can play a critical role in their wider context where they are able to ‘remake’ the city through ‘urban improvement’. This means incorporating improvements to the structure of streets and public domain in neighbourhoods as higher density development occurs. More detailed planning is a platform for considering these types of improvements.

Many parts of Canberra already have good urban structure and provide a foundation for good local planning and design, for example:

- urban subdivisions situated intentionally and respectfully in the landscape, integrating natural features
- distinctive street character with a recognisable hierarchy of roles and incorporating urban tree canopy
- connected walkable street networks that design in opportunities for physical activity and social exchange
- buildings that front onto streets and parks, providing oversight of and access to public spaces and public transport.

As Canberra grows and the light rail and public transport network expands, ACT Government policies like Movement and Place point to making urban places work for all modes of travel including walking, cycling and public transport, not just private vehicles. As roads integrate more travel modes and attention turns towards their 'place' role, adjacent redevelopment should respond accordingly.

Development can complement and reinforce multimodal boulevard activity, providing for a variety of transport choices to support more intensive land use development nearby. Street design will seek to balance the needs of users, and the speed of movement particularly of private vehicles, to support the 'place' function of the corridor and give surrounding suburbs access to strategic and metropolitan transport networks by:

- providing new street, park and lane connections to public transport and cycling and walking networks that break down the existing lack of connection
- establishing built form that positively fronts all public edges, rather than fencing these off
- contributing to improvement in the quality of the public domain and landscape, including WSUD and additional deep soil plantings for tree canopy
- making great local urban places, integrating all transport modes with amenity.

Future development in some parts of Canberra needs to include initiatives to bring amenity and density together to achieve 'urban improvement'. Four types are:

1. achieving multimodal boulevards
2. realising lively local centres
3. shortening long or large urban blocks to make a more walkable Canberra
4. accessing Canberra's green network.

Appendix 2 sets out the conditions in which each of these four types of 'urban improvement' should be applied, with specific initiatives identified to achieve this. These treatments will not necessarily be applied in all circumstances or all districts, but the aim is for new development in Canberra to allow for diversity while also contributing to the wider benefit of the community. Mechanisms will be developed to achieve these 'urban improvement' outcomes where additional development is being proposed.

9 Precinct-based zero carbon initiatives

The ACT Government has committed to phase out light internal combustion engine vehicles from 2035 and transition away from the use of fossil-fuel gas by 2045. This will increase electricity demand, requiring upgrades to our electricity system. Infrastructure such as battery storage systems will need to be deployed within homes, neighbourhoods and at strategic electrical infrastructure nodes. Some initial planning system changes to facilitate this are being considered and further changes will be needed over time.

Building owners will need the ability to adapt existing buildings, for example by changing their heating and cooling systems from gas to fully electric. This may require additional infrastructure on or around the building. The planning system will need to enable these changes; support and incentives may also be needed.

While some initiatives may be mandated, there are opportunities for development proponents to go beyond minimum standards. This should be encouraged. Precincts and larger scale development sites should test the scope for precinct-based initiatives that contribute to the ACT's energy transition, as well as broader resilience outcomes.

The initiatives are most likely to be viable where 50–100,000 square metres of floorspace (or more) is proposed. This equates to around 500 or more dwellings and significant retail and office floorspace. However, smaller developments should be encouraged to take action where possible.

Precinct based initiatives may include:

- using new development as a catalyst to convert existing buildings in the precinct away from gas
- buildings with above-minimum energy efficiency
- actions to support zero emissions vehicles that are above-minimum 'EV Ready' standards
- reduced 'Scope 3' embedded emissions (e.g. low emissions building materials)
- recycled water systems to support extensive greening and zero sewer in large-scale developments that can connect to the broader neighbourhood for sewer mining (recycling of wastewater) and support enhanced greening
- innovative waste solutions targeting localised food and garden organics waste diversion through centralised composting facilities, community gardens and, if feasible, distributed medium-scale organics waste management systems
- sustainability certification, for example through the Green Building Council of Australia.

These initiatives will need to be integrated as controls, where appropriate, in the new ACT planning system and Territory Plan. Initiatives identified for each district will contribute towards this zero carbon agenda.

10 Integrated infrastructure planning

As well as actions within the planning system and related transport planning and investment, there are initiatives that require implementation by different parts of ACT Government to deliver on the vision and directions for each district.

This will include items like upgrades and decisions concerning civil infrastructure (stormwater, electricity supply, road network and sewer), environmental upgrades and management, and the management and planning of existing and new recreational and community facilities such as major infrastructure (for example, schools and Early Childhood Education and Care (ECEC) – which also contribute to community and social outcomes by making school facilities available for community use outside of school hours). Different directorates and agencies have a role in planning for these (for example, EPSDD, Education Directorate, ACT Sport and Recreation, ACT Property Group, ArtsACT, Libraries ACT), **requiring a cohesive approach and collaboration across ACT Government to align plans for these pieces of infrastructure with the objectives and aims of the district strategies.**

District and local community facilities assessments and other analyses, including consultation with the community, will be needed to confirm and address potential gaps in provision, including more detailed analysis of need, location and viability of potential new community facilities in each district. The Education Directorate is currently preparing updated feasibility and demand studies for future school needs using recently updated student demand projections.

11 Governance for comprehensive redevelopment

Delivering on the district strategy planning and urban design principles may require more significant interventions in some places than just rezoning land or applying new planning controls. This is particularly the case in areas where holistic thinking and significant intervention and 'urban improvement' is needed.

In some parts of Canberra, the existing urban structure means that delivering sustainable infill development is more challenging and may require and benefit from the amalgamation and re-assembly of some sites.

Having clear governance and agency responsibility or clarity of a body that has responsibility for being an 'urbanising agent' can be an important part of this. This requires clarity in responsibility for communicating, planning, brokering, co-ordinating and funding particular projects, which could be for a particular site or a whole precinct. There is benefit in these functions being clearly identified in relation to governance, funding and delivery responsibilities. The intention is to have a body that has the remit and capacity to act as the overarching agent for change. This could be within existing government structures or require more deliberate focus.

Functions and responsibilities that need to be clearly identified and allocated include:

- preparing planning proposals and precinct plans and subdivision designs, demonstrating exemplary urban design and feasibility, to be integrated into the Territory Plan
- procuring the infrastructure to support new development
- undertaking demonstration projects (either independently or through other delivery models such as public, private partnerships)
- developing models for value sharing, which encourage landowner participation and allow for optimal assembly of sites to deliver outcomes
- establishing mechanisms for achieving public domain contributions or upgrades, serving multiple objectives including enhanced access to open space as well as opportunities to address urban heat (for example, enhancing tree canopy), in consideration of development outcomes
- meeting the relevant targets for land release, dwelling numbers, housing choice and affordability, employment and mixed-use development
- using a triple bottom line approach to urban development so urban uplift is combined with public benefit and environmental improvements.

It is proposed that an urbanising agent or clear identification of specific responsibilities and governance models is still to be defined but could be established to bring together skills from across the ACT Government for projects where the above aspects are required to facilitate specific outcomes in key precincts in some districts. It is proposed that EPSDD will do further work on this concept for consideration by government.

The results of the 2021 Census show that around 23% of rental households in the ACT are in housing stress. The Australian Housing and Urban Research Institute (AHURI) recently found¹ that the ACT has a current shortfall of 3,100 social housing dwellings and a projected shortfall of 8,500 by 2036.

The price of housing and shortage of accessible, affordable stock is influenced by a range of factors outside the ACT Government's control. Nevertheless, the ACT Housing Strategy recognises the crisis of affordability in Canberra and includes initiatives focussed on building the social and affordable housing stock.

These include the Growing and Renewing Public Housing program and a commitment to dedicate at least 15% of eligible releases in the Indicative Land Release Program each year to affordable, community and public housing. The SLA also offers the Affordable Home Purchase Scheme, which assists low-to-moderate income households by providing homes for purchase at affordable prices.

The planning system also has a role to play in facilitating diverse housing forms, including through new models such as co-housing, manor houses and build-to-rent, which can contribute to more affordable housing options in the private market.

Inner North and City District context

Inner North and City District includes the City Centre and suburbs of Watson, Hackett, Downer, Lyneham, Dickson, O'Connor, Ainslie, Turner, Braddon, Acton, Reid and Campbell

This district has seen significant population growth and development in recent years, catalysed in part by the light rail corridor that links the City Centre to Gungahlin. The City Centre is the economic, civic and cultural centre of Canberra. The district is home to major economic and knowledge assets including university campuses and the Russell defence precinct, plus highly valued recreational and open space areas and event spaces. While the City Centre is highly urbanised, many parts of the district retain important environmental and cultural values embedded within the suburban character.

As well as the district strategy, **the City Plan** and **City Precinct Renewal Program** provide important and more detailed principles and actions to guide development in the district. The ongoing implementation of the City and Gateway Urban Design Framework includes updates to building heights and other policies in the Territory Plan to be in line with the National Capital Plan. Updates will be made to the Inner North and City district policies to reflect block amalgamations and future initiatives from the City Plan and City Precinct Renewal Program respectively.

Opportunities and challenges

Natural features, connections and heritage

Inner North and City District has many important green spaces and nature reserves with ecological and recreational values. These include the Lake Burley Griffin foreshore, Mount Ainslie Nature Reserve, Mount Majura Nature Reserve, Justice Robert Hope Park Nature Reserve, O'Connor Ridge Nature Reserve, Crace Grassland Nature Reserve, Black Mountain Nature Reserve and Haig Park. The Canberra Nature Park Management Plan 2021 guides the management of the nature reserves.

Despite being highly urbanised, the district retains areas of the critically endangered ecosystems of Yellow-Box Grassy Woodland and Natural Temperate Grassland as well as habitat for threatened species such as the Striped Legless Lizard, Golden Sun Moth, Ginninderra Peppercreep, Hoary Sunray, Canberra Raspy Cricket, Perunga Grasshopper, Rosenbergs Monitor, Pink-tailed Worm-lizard, Superb Parrot and a range of ACT-listed orchid species.

Sullivans Creek and its riparian corridor is a significant landscape feature that provides for active travel and recreation and, in times of flood, channels and stores water. Re-naturalisation of the creek line where possible will help protect and enhance the local environmental and cultural values. Development pressures on this corridor need to be carefully managed.

Most of the district has excellent tree canopy cover, however the City Centre was only at 18% in 2020. Most of the district is relatively cool in hot weather, however there are small urban heat 'hotspots' such as Russell and northern parts of Lyneham.

Important heritage elements include Haig Park, Glebe Park, Corroboree Park and the Garden City character of suburbs in Turner, Braddon, Ainslie and Reid.

Employment hubs and economic activity

The Inner North and City has the largest share of jobs among the districts, at around 31% in 2016, driven by the City Centre as Canberra's major employment centre.

Other significant employment precincts include the Australian National University/ Commonwealth Scientific and Industrial Research Organisation (ANU/CSIRO) campus in Acton, the Duntroon/Australian Defence Force Academy (ADFA) campus in Campbell, the defence precinct in Russell and the Australian Catholic University (ACU) and Academy of Interactive Entertainment (AIE) in Watson.

These precincts contribute to the high proportion of jobs in knowledge intensive employment industries in the district, making up around 64% of jobs in 2016.

The City Centre is the hospitality and night-time economy hub for Canberra.

The district has one group centre at Dickson and eight local centres. Dickson is the ACT's largest group centre. It has a more strategic economic function and office-based employment than other group centres.

Exhibition Park in Canberra (EPIC) is an important location within the district as one of the only spaces across the city with the capacity for large-scale events.

Transport and travel

The Inner North and City is well serviced for active travel compared to other districts. Projects currently underway will further enhance this with new active travel network connections through Watson and Ainslie into the City Centre.

The City Centre bus interchange is the primary hub for public transport across the city. A large share of Canberra's bus routes, including the rapid routes, travel through or terminate in the City Centre, as do regional bus links. The

interchange includes the current terminus of the Gungahlin to the City Centre light rail corridor, which has seen very high patronage since it was established in 2019, excluding during COVID-19 lockdowns.

Early works have begun to prepare for the construction of the light rail corridor connecting Alinga Street to Commonwealth Park. This includes the raising of London Circuit in the south-west. While the exact alignments of future routes are yet to be confirmed, the future light rail corridor from Belconnen to Canberra Airport will travel through the City Centre, impacting on the configuration of the bus interchange and other transport connections around the City Centre.

Suburbs in the north of the district are serviced by a rapid bus linking Belconnen and Watson through Dickson. The Dickson interchange is an important hub for local bus routes.

The Planning Strategy and Transport Strategy have identified the potential for a high speed rail connection into the City Centre via the East Canberra district. However, the potential for this infrastructure would be a much longer term prospect than the horizon for this district strategy. It will require more detailed planning and collaboration with stakeholders including the Australian Government.

Housing and affordability

The Inner North and City's urban structure has been heavily influenced by the original Griffin Plan, particularly in the City Centre. The district has seen substantial growth in recent times, particularly along Northbourne Avenue, in the City Centre, around Dickson group centre and in Braddon, which has transitioned its historical service trades function into an active mixed-use precinct.

The district has one of the highest shares of apartment dwellings (43% in 2021). A further 18% is medium-density housing. Compared to the

other districts, it has the lowest share of separate houses (39%).

Future residential development in the district will likely continue to be of a medium and higher density character, guided by the City Plan, City Precinct Renewal Program and the City and Gateway Urban Design Framework.

Numerous development projects and land release sites planned for the City Centre, along Northbourne Avenue and in Watson will contribute to delivering new housing. The light rail corridor will influence the urban form along this corridor and in the City Centre.

Most of the district ranks highly in relative suitability for housing, particularly the City Centre and its surrounds and around Dickson and local centres. Across the more suburban areas, block sizes tend to be larger, offering potential opportunities for more infill development where appropriate.

As of 2021, the Inner North and City had one of the higher shares of rental households experiencing rental stress, at 24.2% (compared to 23% across the ACT).

Current initiatives to contribute toward addressing housing affordability include the release of a site in Turner for 'Build-to-Rent' housing, which will have a minimum affordable rental component, and Territory-wide actions to facilitate build-to-rent models to deliver a large number of rental properties and more housing options for residents.

Community facilities and local and group centres

The district's group and local centres are performing relatively well. Local centres such as Ainslie, O'Connor, Campbell and Lyneham are key meeting points and activity hubs for their communities.

The district ranks relatively high overall in terms of the SEIFA index, though there are areas with lower socio-economic indicators.

As a central area of the city, much of the district enjoys good relative accessibility to community facilities. Access is comparatively lower in the most north and eastern parts of the district compared to the City Centre and around Northbourne Avenue. Facilities in the district are generally dispersed across the suburbs with a concentration of higher order facilities in the City Centre; note that some of these facilities service needs across the whole of the ACT.

With the level of development and population growth in the district, many types of community facilities and infrastructure are seeing increased demand pressures, including schools. As the district is already highly developed and therefore constrained in terms of land availability, planning for adequate social infrastructure and innovative delivery models to support future growth will be key.

Note: the snapshot on the following page refers to both 2016 and 2021 ABS Censuses as not all the 2021 Census data was available when the strategies were prepared. The intention is to update the strategies when additional 2021 Census data is available and the ACT's population projections have been revised.

Inner North and City District planning projects

Existing planning projects and policies that apply in parts of the Inner North and City are shown in Figure 31. The figure shows the relationship and overlap of these different projects, which are being led by both ACT Government agencies and the National Capital Authority.

Figure 31: Inner North and City district planning projects

INNER NORTH DISTRICT PLANNING PROJECTS

Source: EPSDD, 2022.

City Plan – providing a vision for future development

The City Plan sets out a vision for future development in the City Centre and was officially launched in March 2014. It provides a single, overarching strategic framework and plan for the City Centre. The 2014 City Plan is being updated during 2022. The community will have the opportunity to provide feedback on the updated plan shortly after the district strategies consultation commences.

The revised City Plan will be a separate document from the district strategies, providing more specific and detailed analysis, with a focus on the issues, opportunities and actions for the City Centre.

The City Centre is the ACT's primary municipal centre. It forms one apex of the National Triangle and is home to cultural, administrative, educational, residential, retail and commercial activities. The area plays a vital role in connecting the central core, Lake Burley Griffin and the National Triangle, has significant cultural and commercial importance for the ACT and is an area of increasing economic opportunities.

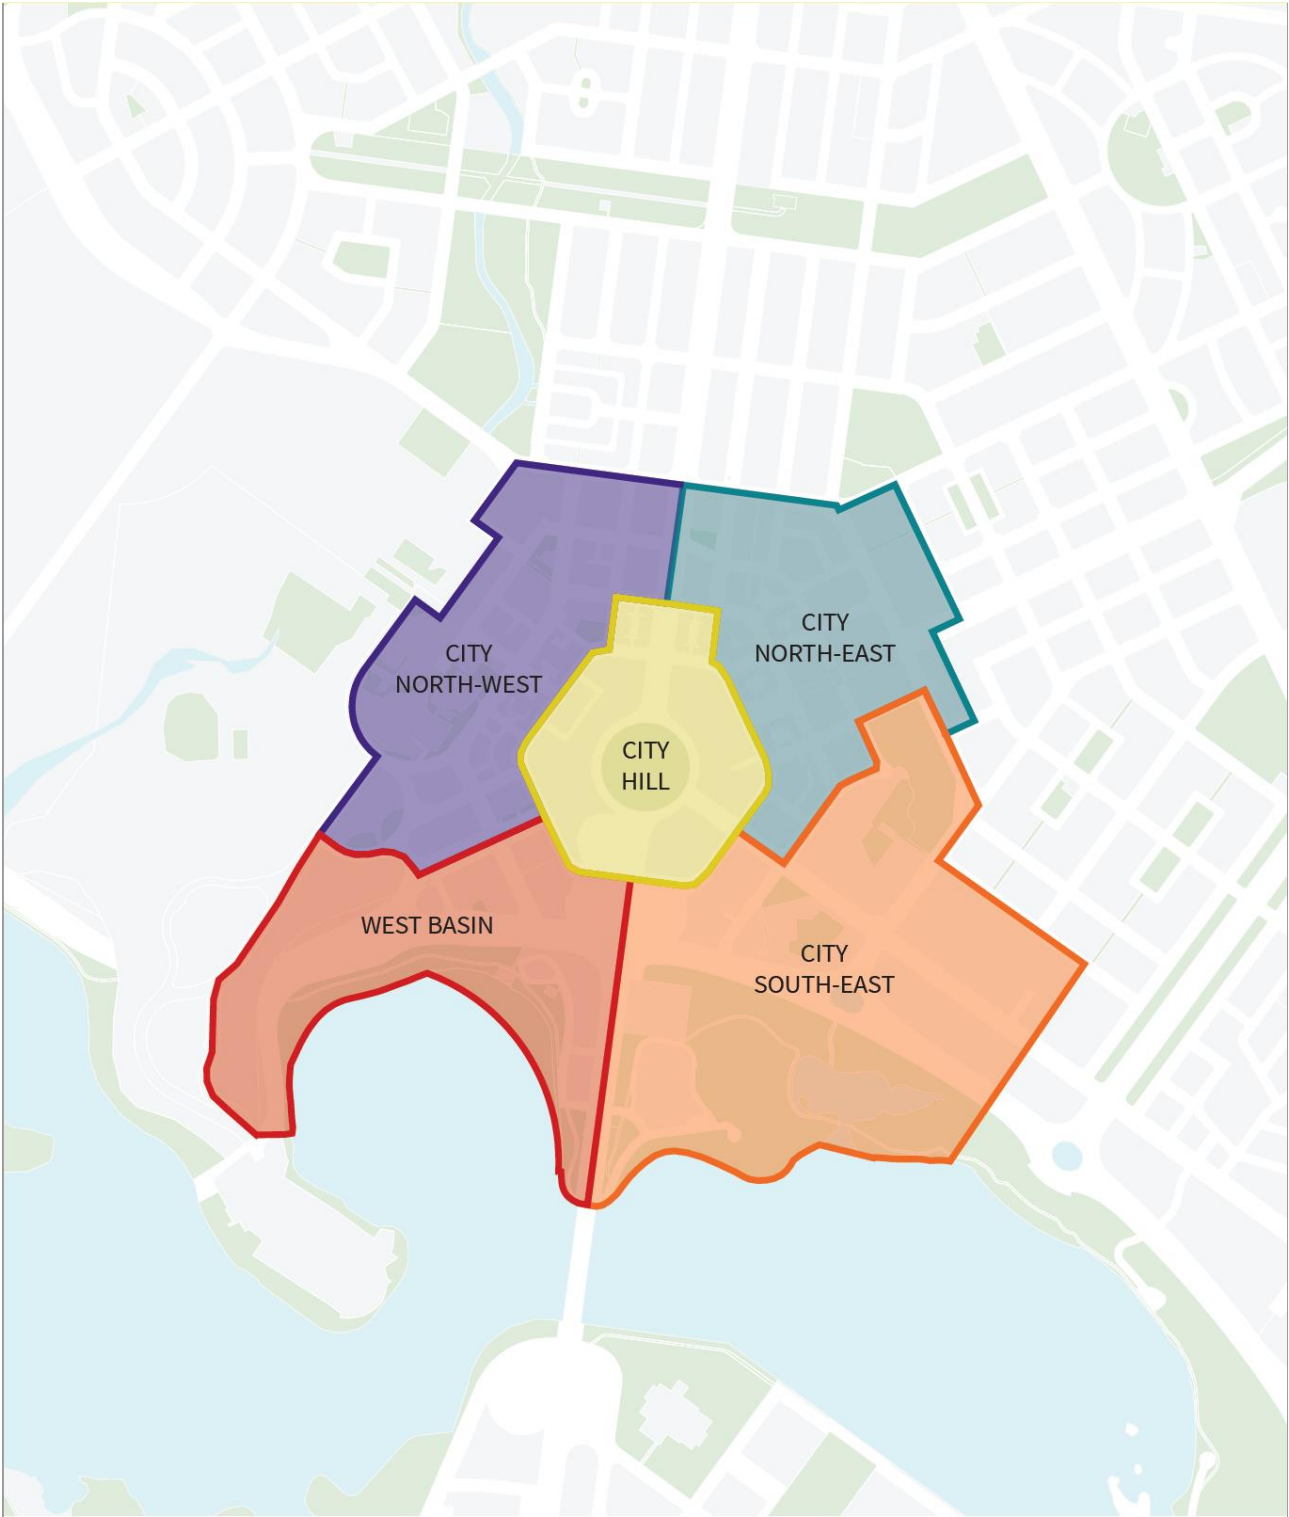

The City Plan sets out the strategic directions of the City Centre as a whole and directions for its five character precincts, as shown in Figure 32. The updated City Plan includes a draft proposed vision and strategic goals outlined in Table 9.

Table 9: Draft Proposed vision, goals and themes of the City Plan

Draft Vision	
A Fair Place for all A vital and energetic place for people to enjoy and meet that is community focussed, walking and cycling friendly, public transport-oriented, sustainable, resilient and connected to its landscape.	
Draft Strategic Goals	
A City Centre that is our gateway to the world and the cosmopolitan heart of Canberra with a clear sense of arrival and more destinations for people to visit, linger and interact.	A transit-supportive urban environment that balances movement and place with significant provision and priority for pedestrians, cyclists, and public transport users.
An identifiable approach, which increases in formality on approach to the City Centre and which clearly signifies the symbolic and functional roles of the National Capital.	A biodiverse urban environment with generous planting on buildings, the public realm, streets and open spaces that create memorable places to support public life.
A City Centre that is a contemporary expression of the Griffin Plan's structure by strengthening the geometry and form of main avenues, vistas and public spaces.	An easy-to-access, people-first destination that offers unique business opportunities and a wide range of lifestyle options for diverse communities and a distinct urban culture.
A place-based approach to development and urban renewal with a strong focus on design excellence, providing a diversity of housing choices, sustainability and innovation.	A unified City Centre, comprised of five precincts each with their own unique character, united as the heart of Canberra.

Source: EPSDD, 2022.

Source: EPSDD, 2022.

City Precinct Renewal Program – Place-based planning and project delivery

The City Precinct Renewal Program sits within Inner North and City District. The City Precinct Renewal Program was established in 2017 and is overseen by the City Renewal Authority (CRA). The CRA is charged with shaping the growth of the central parts of Canberra to make it a great place to live, explore and enjoy.

In partnership with the community, the CRA aims to create a vibrant city heart through the delivery of design-led urban renewal with a focus on social and environmental sustainability.

The City Precinct Renewal Program comprises an urban corridor that extends from the Federal Highway in the north, through the City Centre to Acton Waterfront in the south, centred along the Northbourne Avenue corridor as shown in Figure 33.

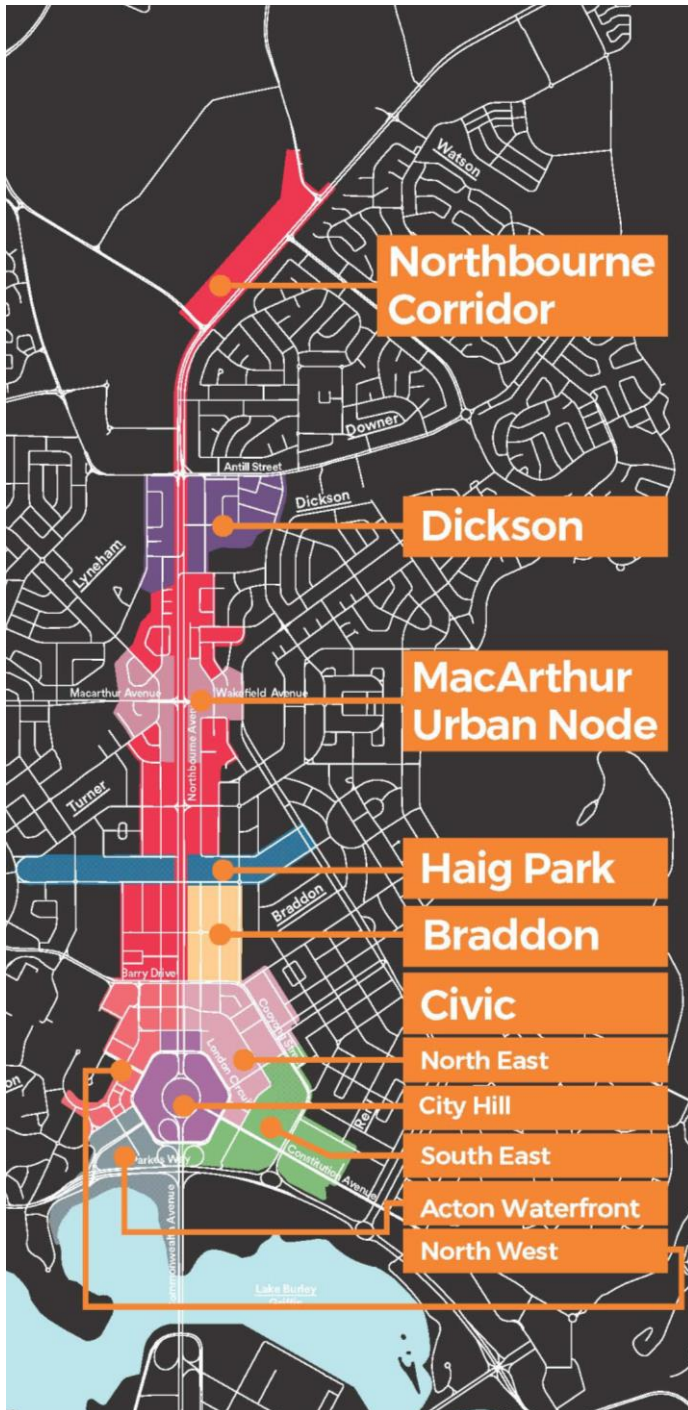

The program complements the City Plan and provides a place-led foundation for planning, project delivery and renewal in the precinct over the next 30+ years. A place-led approach is considered the best way to implement an ambitious renewal program that delivers design excellence and social, environmental and economic benefits, not only for those who live or work in the precinct but the whole Canberra community, creating a City Centre that befits Canberra's role as the National Capital.

The program views the area as a collection of 10 'places' including key inner north locations such as Dickson, Braddon, Haig Park and the City Centre. Each place has its own objectives, targets and actions to deliver on the overall vision for the precinct, which are reflected in the initiatives and actions for Inner North and City District.

Photo credit: ACT Government.

Figure 33: City Precinct Renewal Program and 30-year visions for places

Source: City Renewal Authority Precinct Renewal Program.

Northbourne corridor – the gateway to the City Centre

The Northbourne corridor will be an internationally recognised boulevard, strengthening Canberra’s unique landscape setting and supporting mixed-use redevelopment, including affordable housing and sustainable transport. The architecture and landscaping will distinguish the approach to the City Centre.

Dickson – a thriving urban centre

The Dickson group centre will offer a ‘complete lifestyle’ with housing choices, leisure and dining, retail, business and employment opportunities, while retaining its multicultural uses, strong sense of identity and community focus. It is a transport hub with links to buses, light rail and active travel networks. New development will contribute a greater mix of uses while expanding its fine-grain elements.

Macarthur Village – a landmark mixed-use centre

Macarthur Village will develop as a service and retail hub with a distinctive built form. It is a landmark node, centred on a major light rail stop. Key marker buildings will include a range of commercial and employment uses that complement an improved public realm, day and night economy and sense of community.

Haig Park – a revitalised urban park

Haig Park has become a distinctive and inviting destination for locals and visitors at the heart of the City Renewal Precinct.

Braddon – a vibrant and creative cluster

Braddon will continue to flourish with mixed use redevelopment, an emerging creative economy cluster and as a local community hub. It will be highly activated at ground level with a focus on pedestrians and cyclists.

City Centre

Canberra’s cultural, innovation, retail, commercial, entertainment, education and tourism core, with five places: City Hill, City West, the City Centre, City East and Acton Waterfront.

What the community has told us

Key themes that emerged for Inner North and City District from the district planning consultation undertaken in 2021 are summarised in Table 10.

This feedback informed the analysis and preparation of this district plan. Feedback relates to both the key themes from the ACT Planning Strategy and each of the five big drivers that have underpinned the district level planning as described in Section 3.

Table 10: Feedback from the community for Inner North and City district, 2021

Compact and Efficient city	Diverse Canberra	Sustainable and Resilient Territory	Liveable Canberra	Accessible Canberra
Maintain small green open spaces.	Preserve local shopping areas.	Incorporate green space into future residential development.	Promote Inner North as exemplar of a Garden City.	Create more cycleway links between Yowani Golf Course and EPIC.
Maintain open space in Reid, Hackett, Watson and on Antill Street.	Preserve unique heritage assets and diverse architecture.	Design efficient housing, smaller footprints with increased greenery.	Build homes with gardens.	Make end-of-trip facilities more available.
Create more public transport and active travel links.			Provide access to community gardens and green space.	Create additional and wider off-road cycleways.
Enhance and naturalise Sullivans Creek.			Maintain and reinstate schools.	Provide more mid-block crossings.
			Create a mix of housing density with a focus on medium and low-density dwellings.	Make public transport cheaper to improve accessibility.
				Improve frequency and facilities at public transport stops and interchanges.

Note: The feedback in Table 10 is taken directly from consultation and as expressed by participants.

District Strategy for Inner North and City

Key directions

The following directions highlight the vision for Inner North and City in the future.

Protect, enhance and restore habitat values in key blue-green corridors including re-naturalisation of Sullivans Creek and its tributary waterways, connections to Banksia Street and Dickson Wetlands, and linkages between reserves, urban open space and Garden City precincts.

Make sure future redevelopment contributes towards living infrastructure aims in built up areas including the City Centre.

Protect floorspace and development opportunities for future economic activities and employment to make sure the City Centre maintains its pre-eminent economic role.

Develop innovation precincts around economic assets in the City Centre (ANU/CSIRO and UNSW), Watson (ACU and AIE) and Campbell (ADFA).

Develop the City Centre as a multimodal transport hub including accommodating future light rail corridors, bus interchange functions and improved active travel infrastructure.

Plan in long term for future faster or high-speed rail connection to the City Centre via the East Canberra district and potential support infrastructure.

Revise City Plan to guide high quality future development of the City Centre and reflect the future entertainment plan as relevant to the City Centre.

Develop economic and mixed-use hubs at and nearby light rail stops along the Northbourne Avenue corridor based on sustainable urban development principles.

Pursue innovative models for future community and recreational facilities to support expected population growth, given constrained land supply.

District strategy plan

The Inner North and City District Strategy Plan (Figure 34) highlights the key structural elements and directions for the district based on each of the five big drivers described above. The district strategy plan highlights the following elements (for some districts not all elements are relevant or shown in the maps):

- current and possible future blue-green network values and connections
- current and proposed new transport routes and links, and others for strategic investigation
- centres and locations requiring a particular focus on economic development and employment
- group and local centres that are a focus for consideration of planning and non-planning initiatives to support their ongoing viability and role as a community meeting place (centres to be confirmed through further investigation)
- any new or future proposed community and recreational facilities
- sites and precincts that are identified for future development through existing estate development planning, the ILRP or development proposals and an estimate of the number of dwellings they may deliver
- future investigation areas that will be considered for additional housing in future versions of the district strategies.

Initiatives for Inner North and City

A series of **initiatives** will support delivery of the directions of the Inner North and City District Strategy. The initiatives are related to each of the five big drivers and their associated planning objectives.

The following sections document these initiatives under each driver, and their pathways for implementation in line with those described in Section 4. While some are already planned or underway, the potential timing for delivery is also

shown, based on the following indicative timeframes:

- Short term – next 5 years
- Medium term – next 10 years
- Long term – next 20 years
- Longer term – 20+ years.

Future housing and jobs – for further investigation

The potential future housing demand identified for the Inner North and City is for around **an additional 22,400 dwellings by 2063**, all as infill development (as there are no greenfield precincts planned for the district).

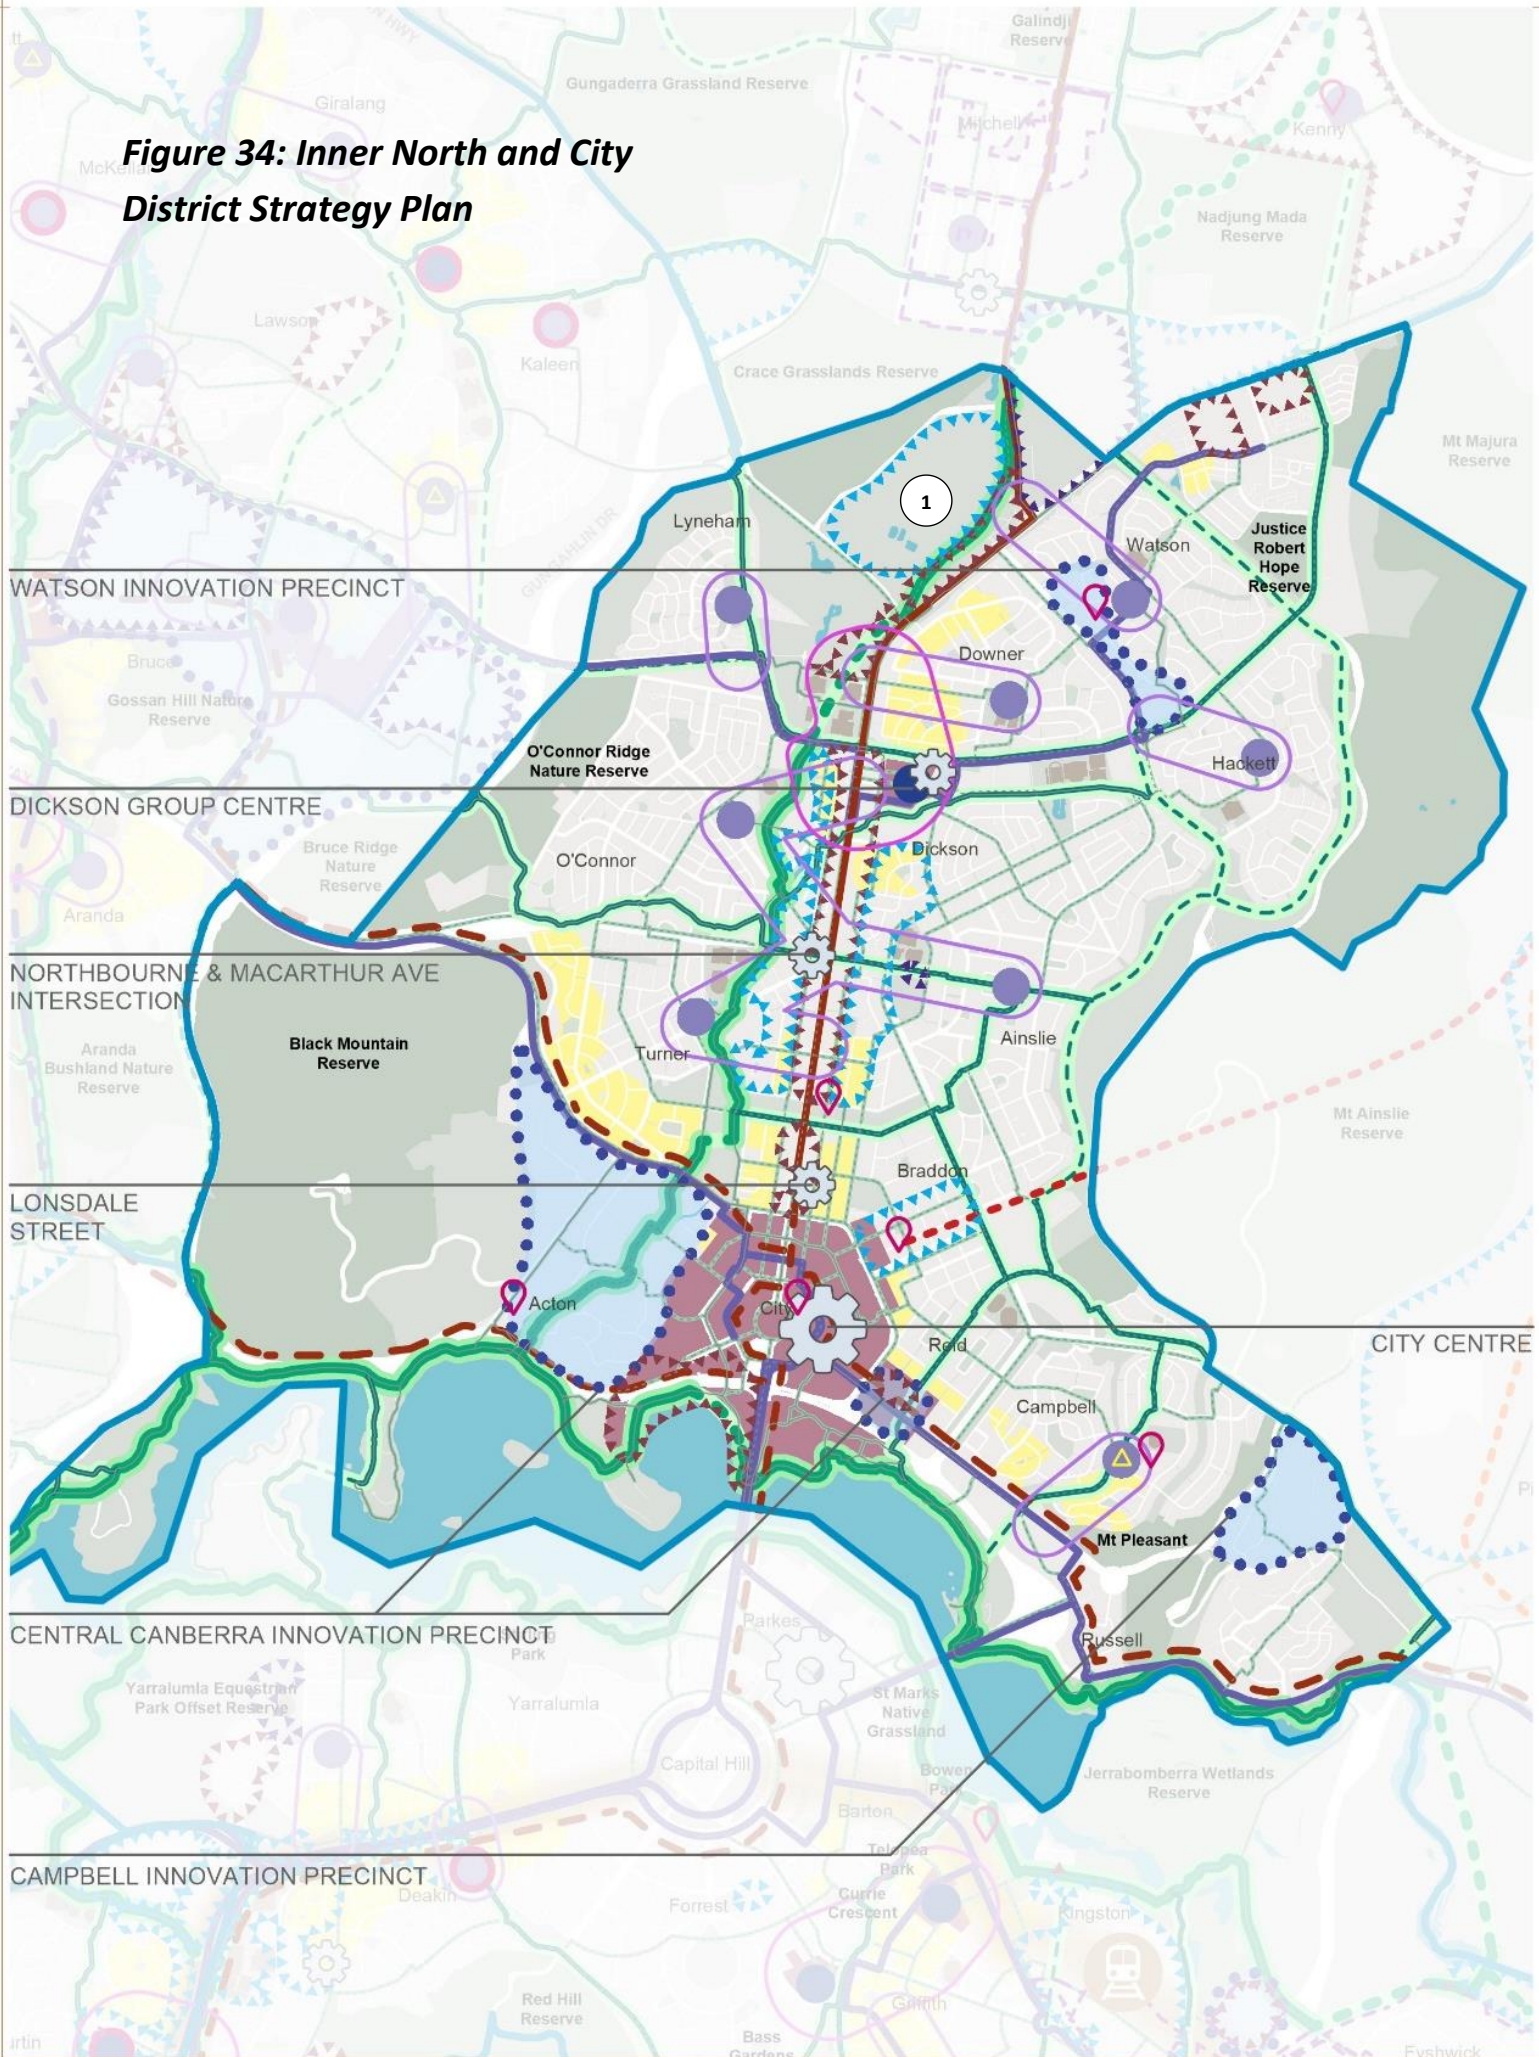

The proposed, possible and potential future change areas will contribute towards meeting this demand. In addition, the identified future investigation areas will be considered to understand their potential for future housing.

The objectives under the five big drivers will be foundational to informing where future change in the district occurs.

Incremental development under existing planning controls is anticipated within the district. This will contribute to meeting the housing demand.

The total baseline potential future employment across the district in 2063 is around 117,000 jobs. The distribution between centres and locations is shown in the table accompanying Figure 34. These projections link the change in jobs to projected population growth and reflect the existing distribution of employment across the ACT, including a large share (48%) of these jobs being located within the City Centre. Centres which are priorities as economic and employment focus areas are indicated (with a ringed circle), implying that higher than baseline employment numbers are desirable in these centres.

Future Investigation Areas

Areas that may be suited to future redevelopment for housing subject to further detailed investigations of factors such as heritage and environmental values, natural hazards, the practicalities of redevelopment, and available infrastructure.

Blue-green network

As new development occurs in Inner North and City District, careful consideration will be given to plan and enhance the network of waterways and green spaces (the blue-green network) through opportunities to protect and restore important environmental and cultural features, as well as increasing the social, resilience to climate change, amenity and active travel outcomes relevant to other themes in this strategy.

As a highly urbanised environment, particularly in the City Centre, it is crucial that new development contributes to the ACT's tree canopy cover and other living infrastructure targets as much as possible. Figure 35 highlights many areas with such values and where future connections and enhancements for people and biodiversity outcomes can be created. This includes addressing gaps in the existing network at the edge of the urban area and Mount Ainslie Nature Reserve, Sullivans Creek, around Lake Burley Griffin and through Lyneham.

Priority areas for protecting and enhancing grassland, woodland and aquatic habitats and ecological connectivity are highlighted in the map. These ecosystems, which include two critically endangered ecological communities, provide habitat for more than ten threatened flora and fauna species. While many of these are currently protected by legislation, new development must consider the need to maintain functional ecosystems, habitats and ecological connectivity to enhance the resilience of the natural environment to urbanisation and climate change. Sullivans Creek in particular is an important riparian corridor and of cultural significance for Ngunnawal people.

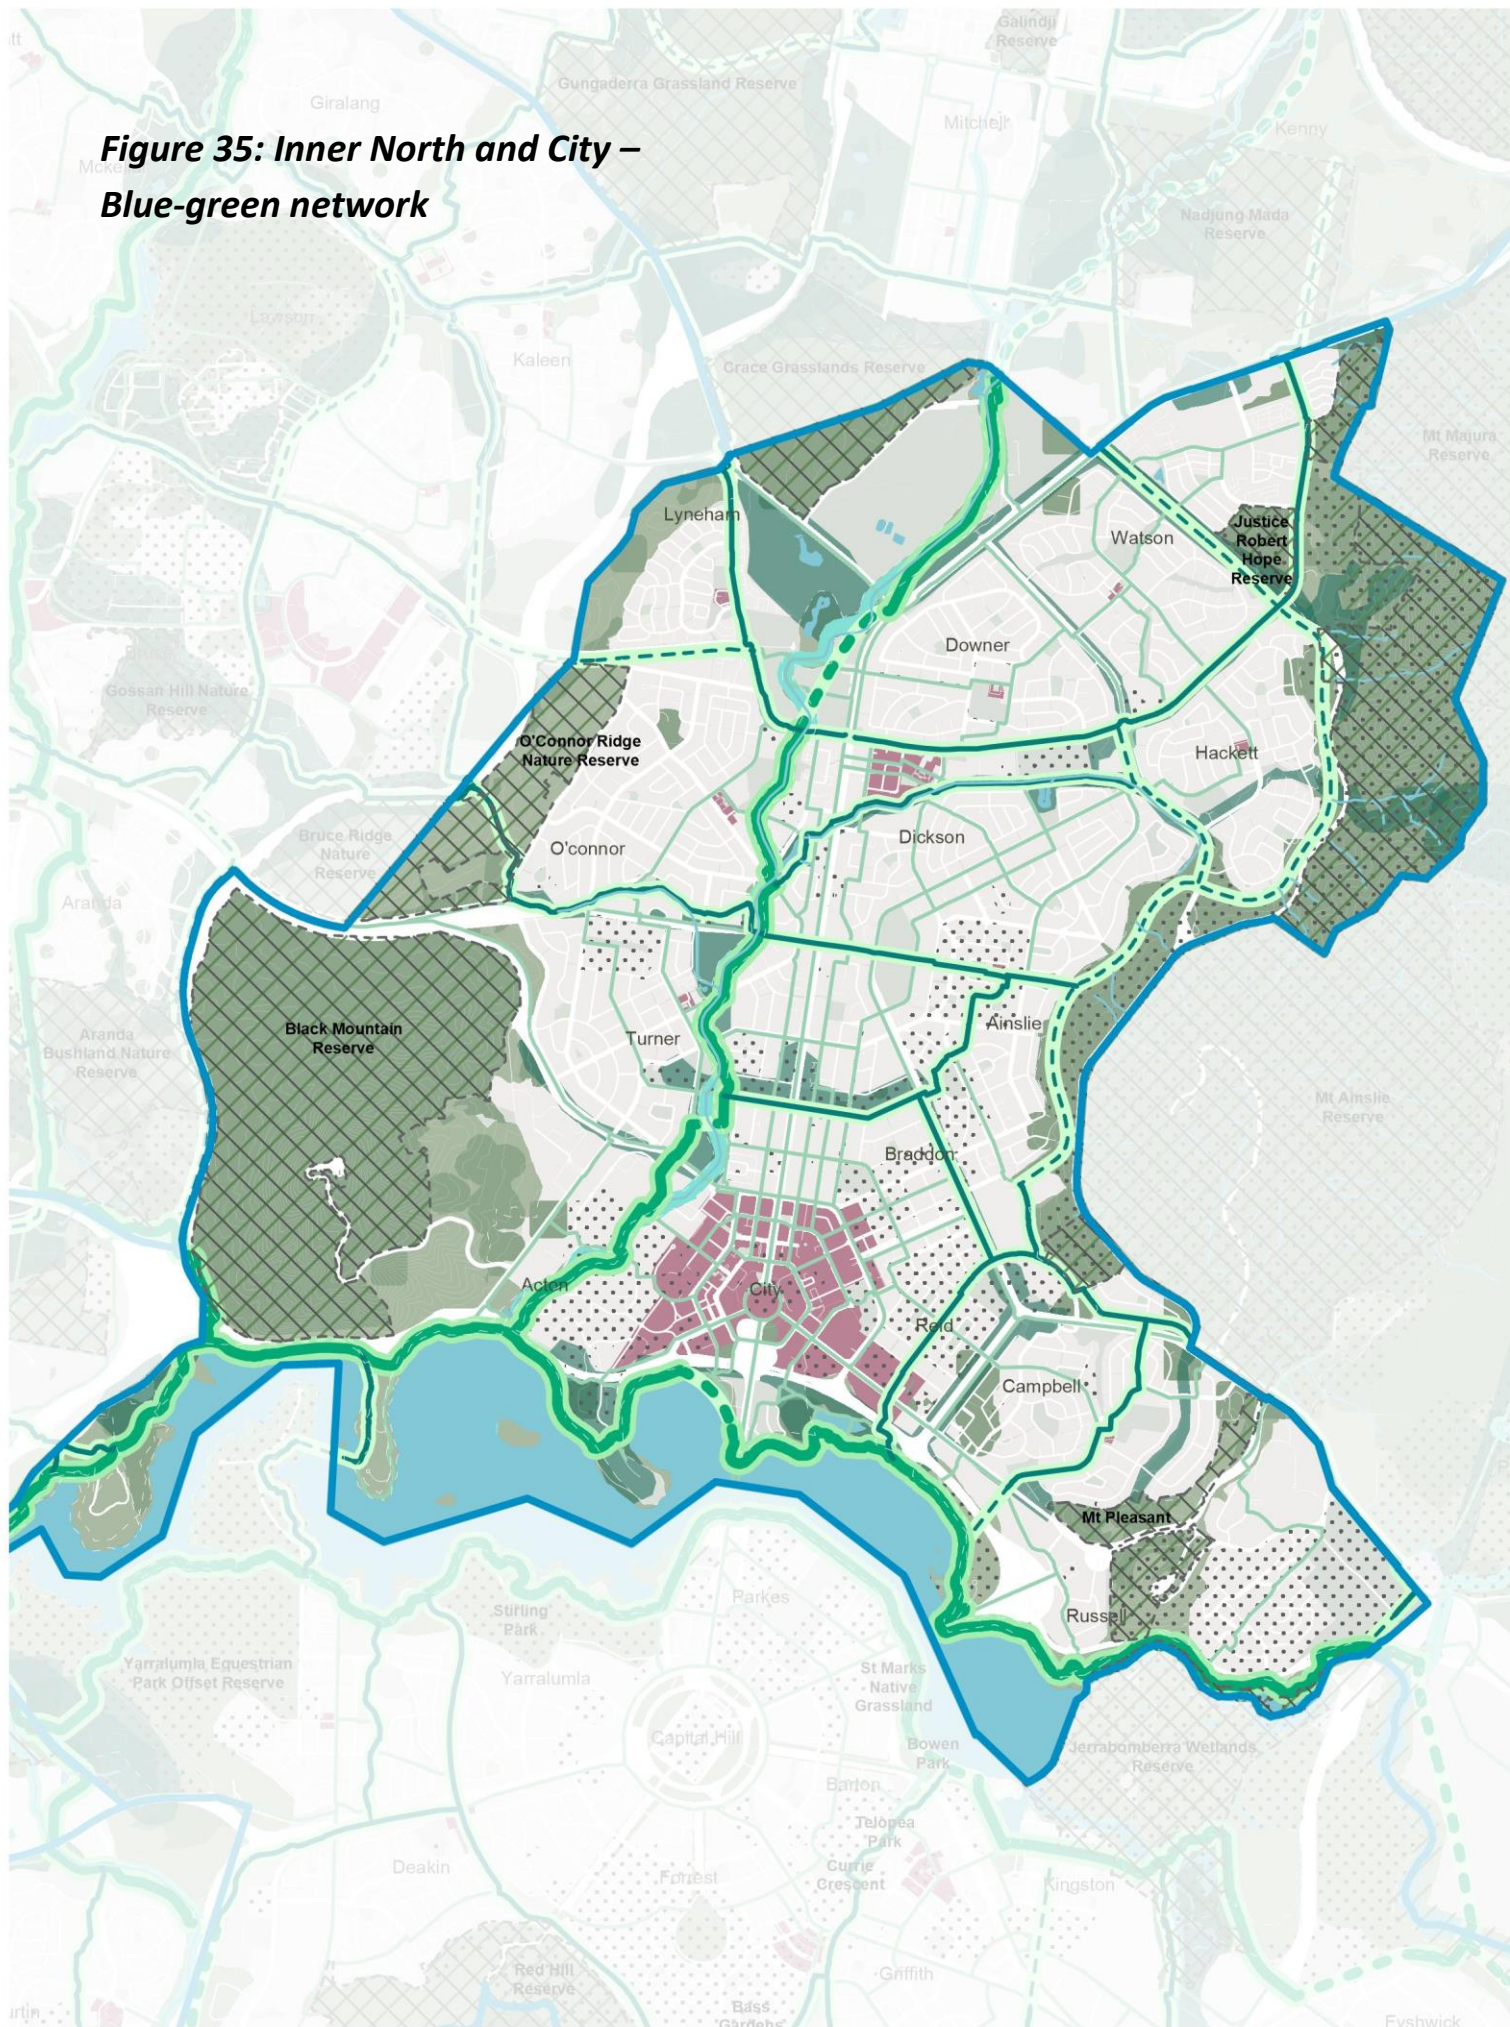

Any development planning must respect the heritage qualities of the district. Economic opportunities for Ngunnawal people should be considered in relation to the cultural and environmental assets of the Inner North and proximity to the City Centre.

Photo credit: ACT Government.

Table 11: Inner North and City initiatives – Blue-green network

Initiatives	Implementation pathway	Timeframe
Protect and restore riparian and aquatic corridors across the district, including re-naturalisation of Sullivans Creek and its tributary waterways to enhance linkages with Banksia Street Wetlands, Dickson Wetlands and Lake Burley Griffin.	1	Ongoing
<p>Enhance and restore habitat value to existing open space throughout the suburbs to facilitate connectivity for fauna and flora (including threatened species) between nature reserves in the west, north and east, including:</p> <ul style="list-style-type: none"> from Mount Ainslie, through Haig Park, across to Sullivans Creek through O'Connor and the Banksia Street Wetland, continuing up to Lyneham Ridge from Lyneham Ridge along Banksia Street Wetland and Sullivans Creek through to Mount Majura Nature Reserve the active travel corridor and Sullivans Creek past Daramalan College, Dumaresq Street and Phillip Avenue through to Mount Majura Nature Reserve Mount Majura Nature Reserve through to Crace Grasslands Nature Reserve Bruce Ridge to Lyneham Ridge across to Crace Grasslands Nature Reserve Bruce Ridge to the foreshore of Lake Burley Griffin and across to Anzac Parade, Mount Ainslie and across to Mount Pleasant Nature Reserve. 	1	Medium term
Investigate expansion of Mount Majura Nature Reserve to include Hackett Horse Paddock.	1	Short term
Implement enhanced water sensitive urban design (WSUD) and ecologically sensitive urban design (ESUD), green space and tree canopy cover as part of all future development proposals in the district to contribute to achieving living infrastructure targets, reducing urban heat and improving environmental outcomes in built up areas.	3	Short term
Utilise and enhance the green network to provide greater amenity and connectivity as outlined in the map, including links around Lake Burley Griffin and linking to northern suburbs via the periphery of Mount Ainslie.	1	Ongoing

Economic access and equity in the city

Location quotient (LQ) analysis of the 2011 and 2016 Censuses (see Figure 36) shows that the Inner North and City's key industry strength is in public administration and safety, particularly with the concentration of office employment and government departments in the City Centre. The district's key role in the hospitality economy is reflected in strong growth and relative strength in the accommodation and food sector, with growth also in the professional, science and technical services sector over this period. This profile of Inner North and City's industry sectors and strengths should inform future planning for the district's economic and employment centres and precincts.

Location Quotient

Location quotient (LQ) is a measure of relative industry specialisation of a local economy compared to a larger area – in the chart below the share of jobs by industry in the Inner North and City has been compared to the ACT as of 2016. A LQ score (*along the x-axis*) greater than 1 indicates a relative industry specialisation in the district and the higher the LQ the higher the specialisation. The other variable is growth between 2011 and 2016 (*along the y-axis*).

Of most importance are the **two right hand quadrants of the diagram** – the top right shows industries that are specialised and growing, and the bottom shows industries that are specialised but contracting in employment. The size of the circles represents the numbers of jobs in each sector.

Figure 36: Location quotient – Inner North and City District 2011-2016

Source: SGS Economics and Planning, 2022, based on ABS 2011 and 2016 Censuses.

While there will be a renewed focus on expanding employment opportunities in other town and group centres, the City Centre will remain the pre-eminent employment hub in Canberra, particularly in a range of primary business, retail, civic, cultural, hospitality entertainment and visitor accommodation activities. Similarly, Dickson will continue to have a significant economic role for the district, including housing government departments and other office space alongside the population-serving functions for the north of the district. New jobs in the City Centre and Dickson will be needed as the population increases around these areas. A more general need to understand the capacity and demand for employment lands across the ACT will inform detailed planning at the place level for Dickson and the City Centre.

The impact of COVID-19 and new hybrid office and home-based working arrangements will impact on daytime activity in the City Centre, but the commercial property market fundamentals are very strong with little indication of a downturn in floorspace demand. This suggests that while hybrid working endures, more complex working patterns can be expected; the need for regular face-to-face interactions for most businesses requiring a City Centre base will remain.

For the City Centre, strong demand for employment floorspace should particularly inform decisions around land use zoning and the need to provide sufficient capacity for commercial uses, implying a careful approach to mixed-use and residential development. In line with this, the development of a City Centre entertainment precinct will be planned. This planning will aim to provide an iconic Canberra nightlife destination in a convenient and accessible location, with clear expectations around amenity for residents and protection of operations for entertainment venues. New planning policies and regulations will be required to support these ambitions and make sure that future development in the City Centre complements its entertainment precinct. Braddon, on the north eastern edge of the City Centre, plays an important entertainment and mixed-use role which should be reinforced. Planning is underway for the Civic, Arts and Cultural Precinct. Economic aims and initiatives for the City Centre will be detailed in the updated City Plan.

Figure 37 highlights the potential for innovation precincts within the district to build on existing assets and infrastructure. The precinct, extending from the ANU/CSIRO to the future UNSW campus in Reid, will have an education and knowledge intensive industries focus. The precinct in Watson could build on the presence of the ACU and the AIE. The precinct in Campbell could build on existing defence capabilities and strengths around the Duntroon campus and Russell.

The future redevelopment of the EPIC site will be another important economic contributor for the Inner North and City while serving an ACT-wide function. EPIC will be supported by the services and amenities available in the Dickson Group Centre. The redevelopment is expected to include capacity for a new 10,000 square metre indoor venue for events and exhibition space, with accompanying commercial floorspace. The site's function as the primary location for large events in Canberra will be retained. No residential development is proposed.

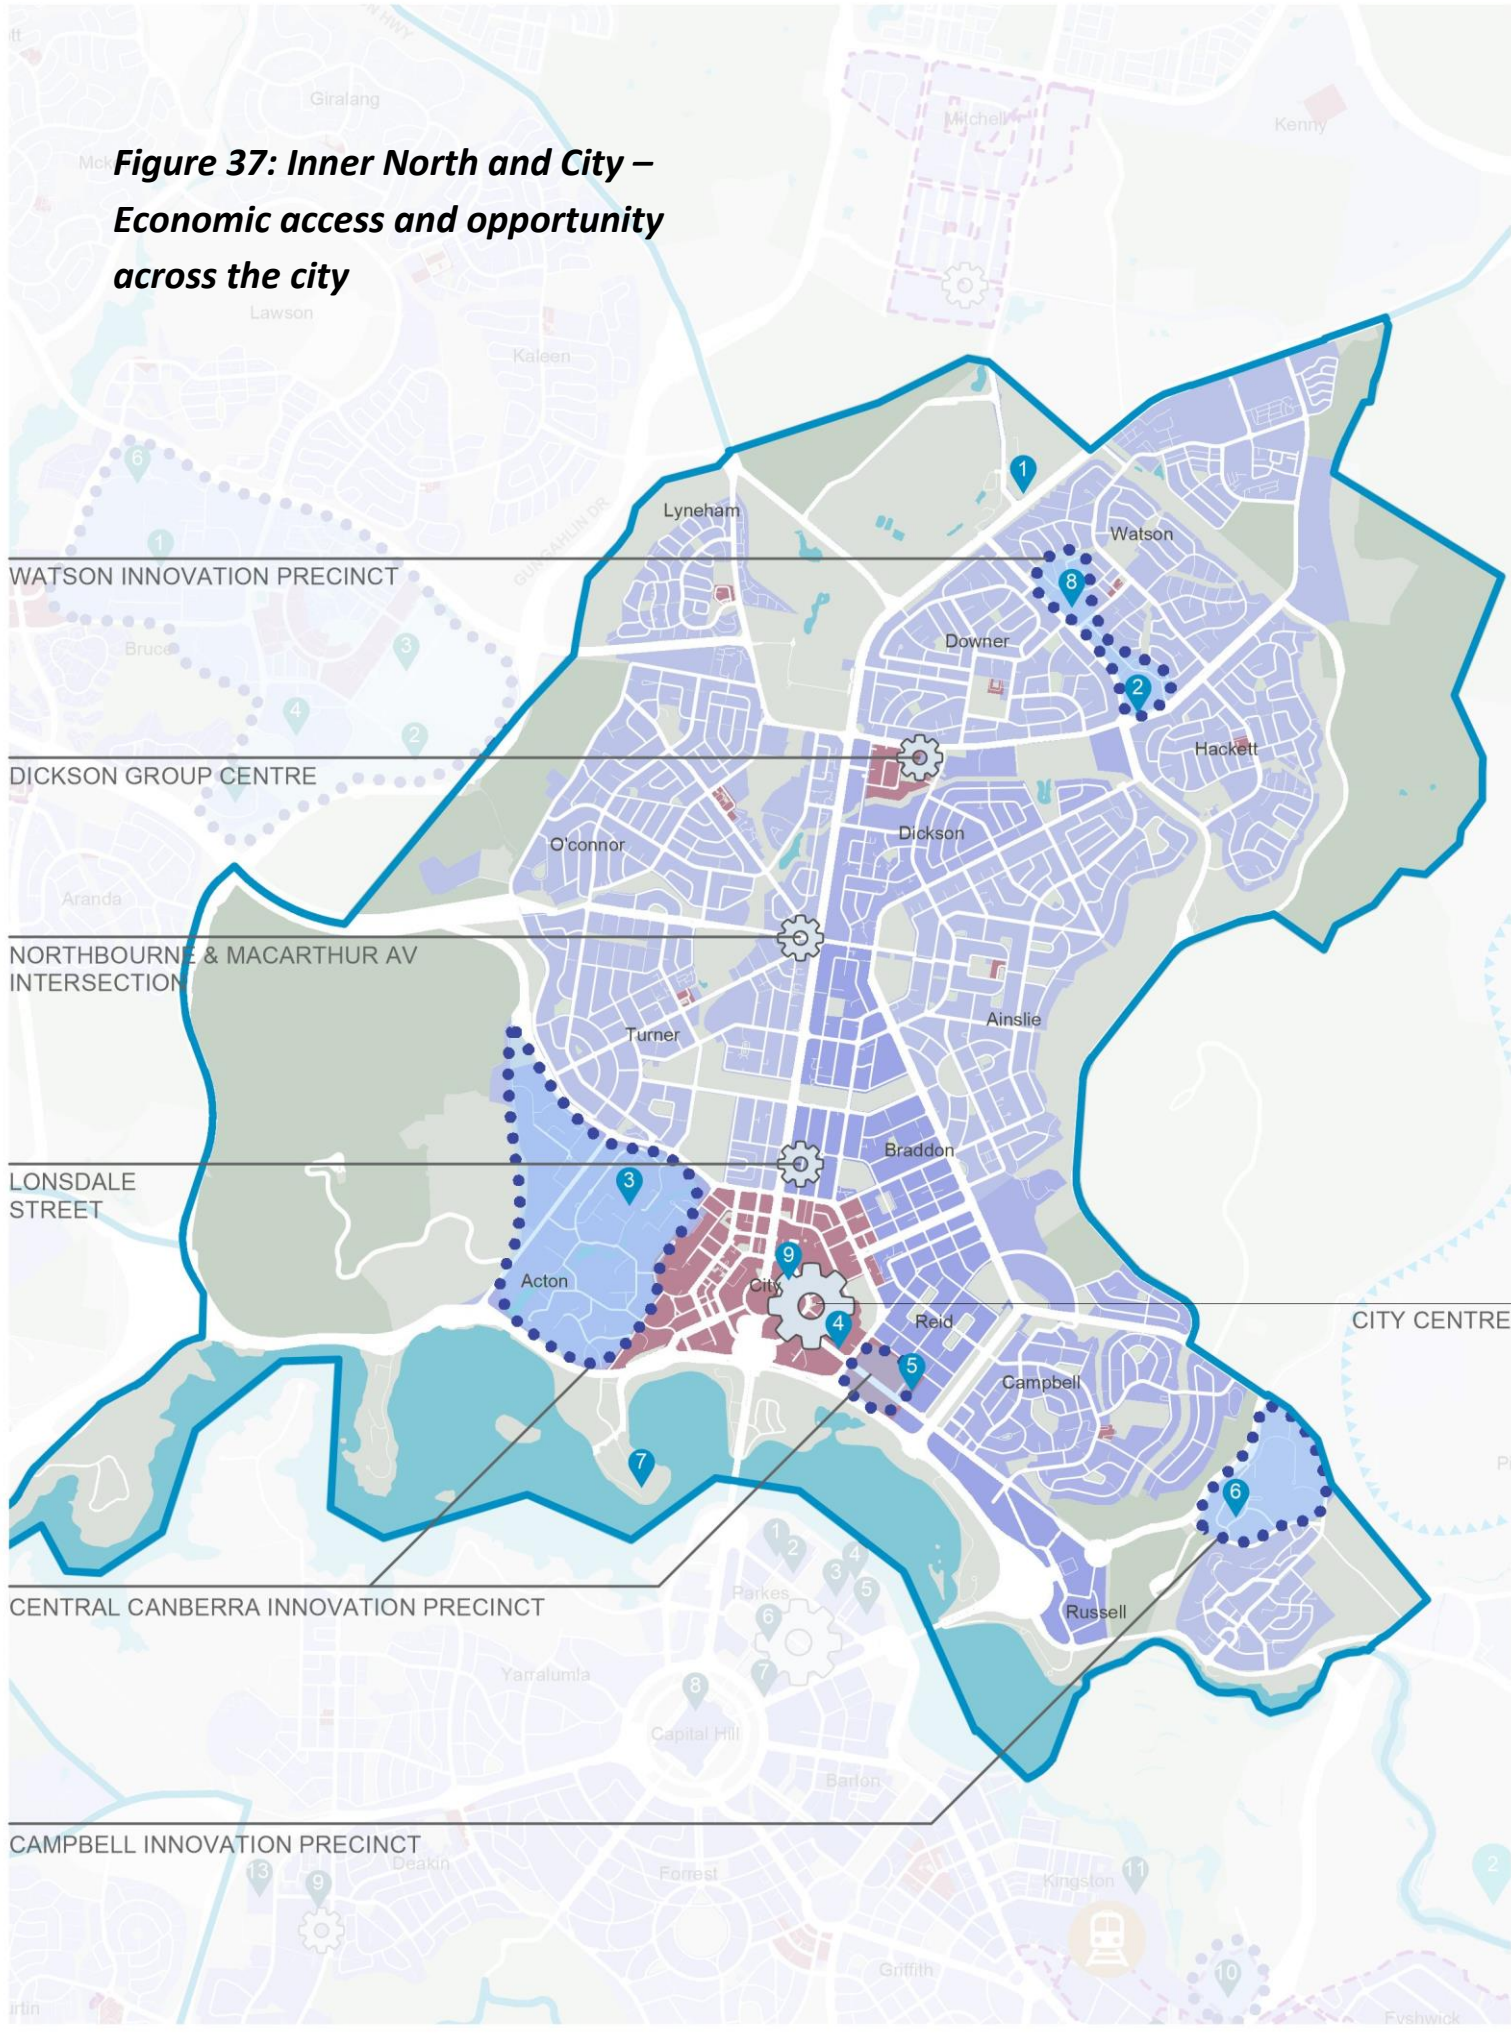

With its existing and new development, the Macarthur Street and Northbourne Avenue intersection is emerging as an economic hub. Future planning, including the integration of currently undeveloped land in this location, should strengthen connections between uses to elevate its potential as a lively enterprise precinct.

Table 12: Inner North and City initiatives – Economic access and opportunity across the city

Initiatives	Implementation pathway	Timeframe
Undertake ACT-wide analysis of capacity and demand for employment floorspace to inform planning for key centres including the City Centre and Dickson group centre, as well as Braddon and the Macarthur Northbourne Avenue precinct and, including capacity to meet strategic employment outcomes.	2 5	Short term
Review planning and other regulatory controls in the City Centre to preserve sites for commercial uses and restrict residential development where appropriate, informed by ACT-wide analysis of need for employment floorspace and to reflect the future entertainment plan as relevant to the City Centre.	2 3 5	Short term
Develop economic initiatives for the City Centre in line with revised City Plan, including a future economic study.	2 10	Medium term
Investigate potential for and develop innovation precincts based around three key areas within the Inner North and City: ANU/CSIRO and future UNSW campus (Acton, the City Centre and Reid), ACU and AIE in Watson, and defence focus in Campbell and Russell.	6	Medium term
Continue planning for future redevelopment of EPIC site to enhance capacity as Canberra's primary venue for large events.	2 3	Ongoing

Strategic movement to support city growth

The delivery of the light rail corridor, extending from Alinga Street around London Circuit to Commonwealth Park, is a transformative transport infrastructure investment for the district. It will contribute to the implementation of the network across Canberra. Future light rail corridors will continue to be planned, with exact alignments yet to be determined. The proposed link from Belconnen to Canberra Airport will travel through the City Centre.

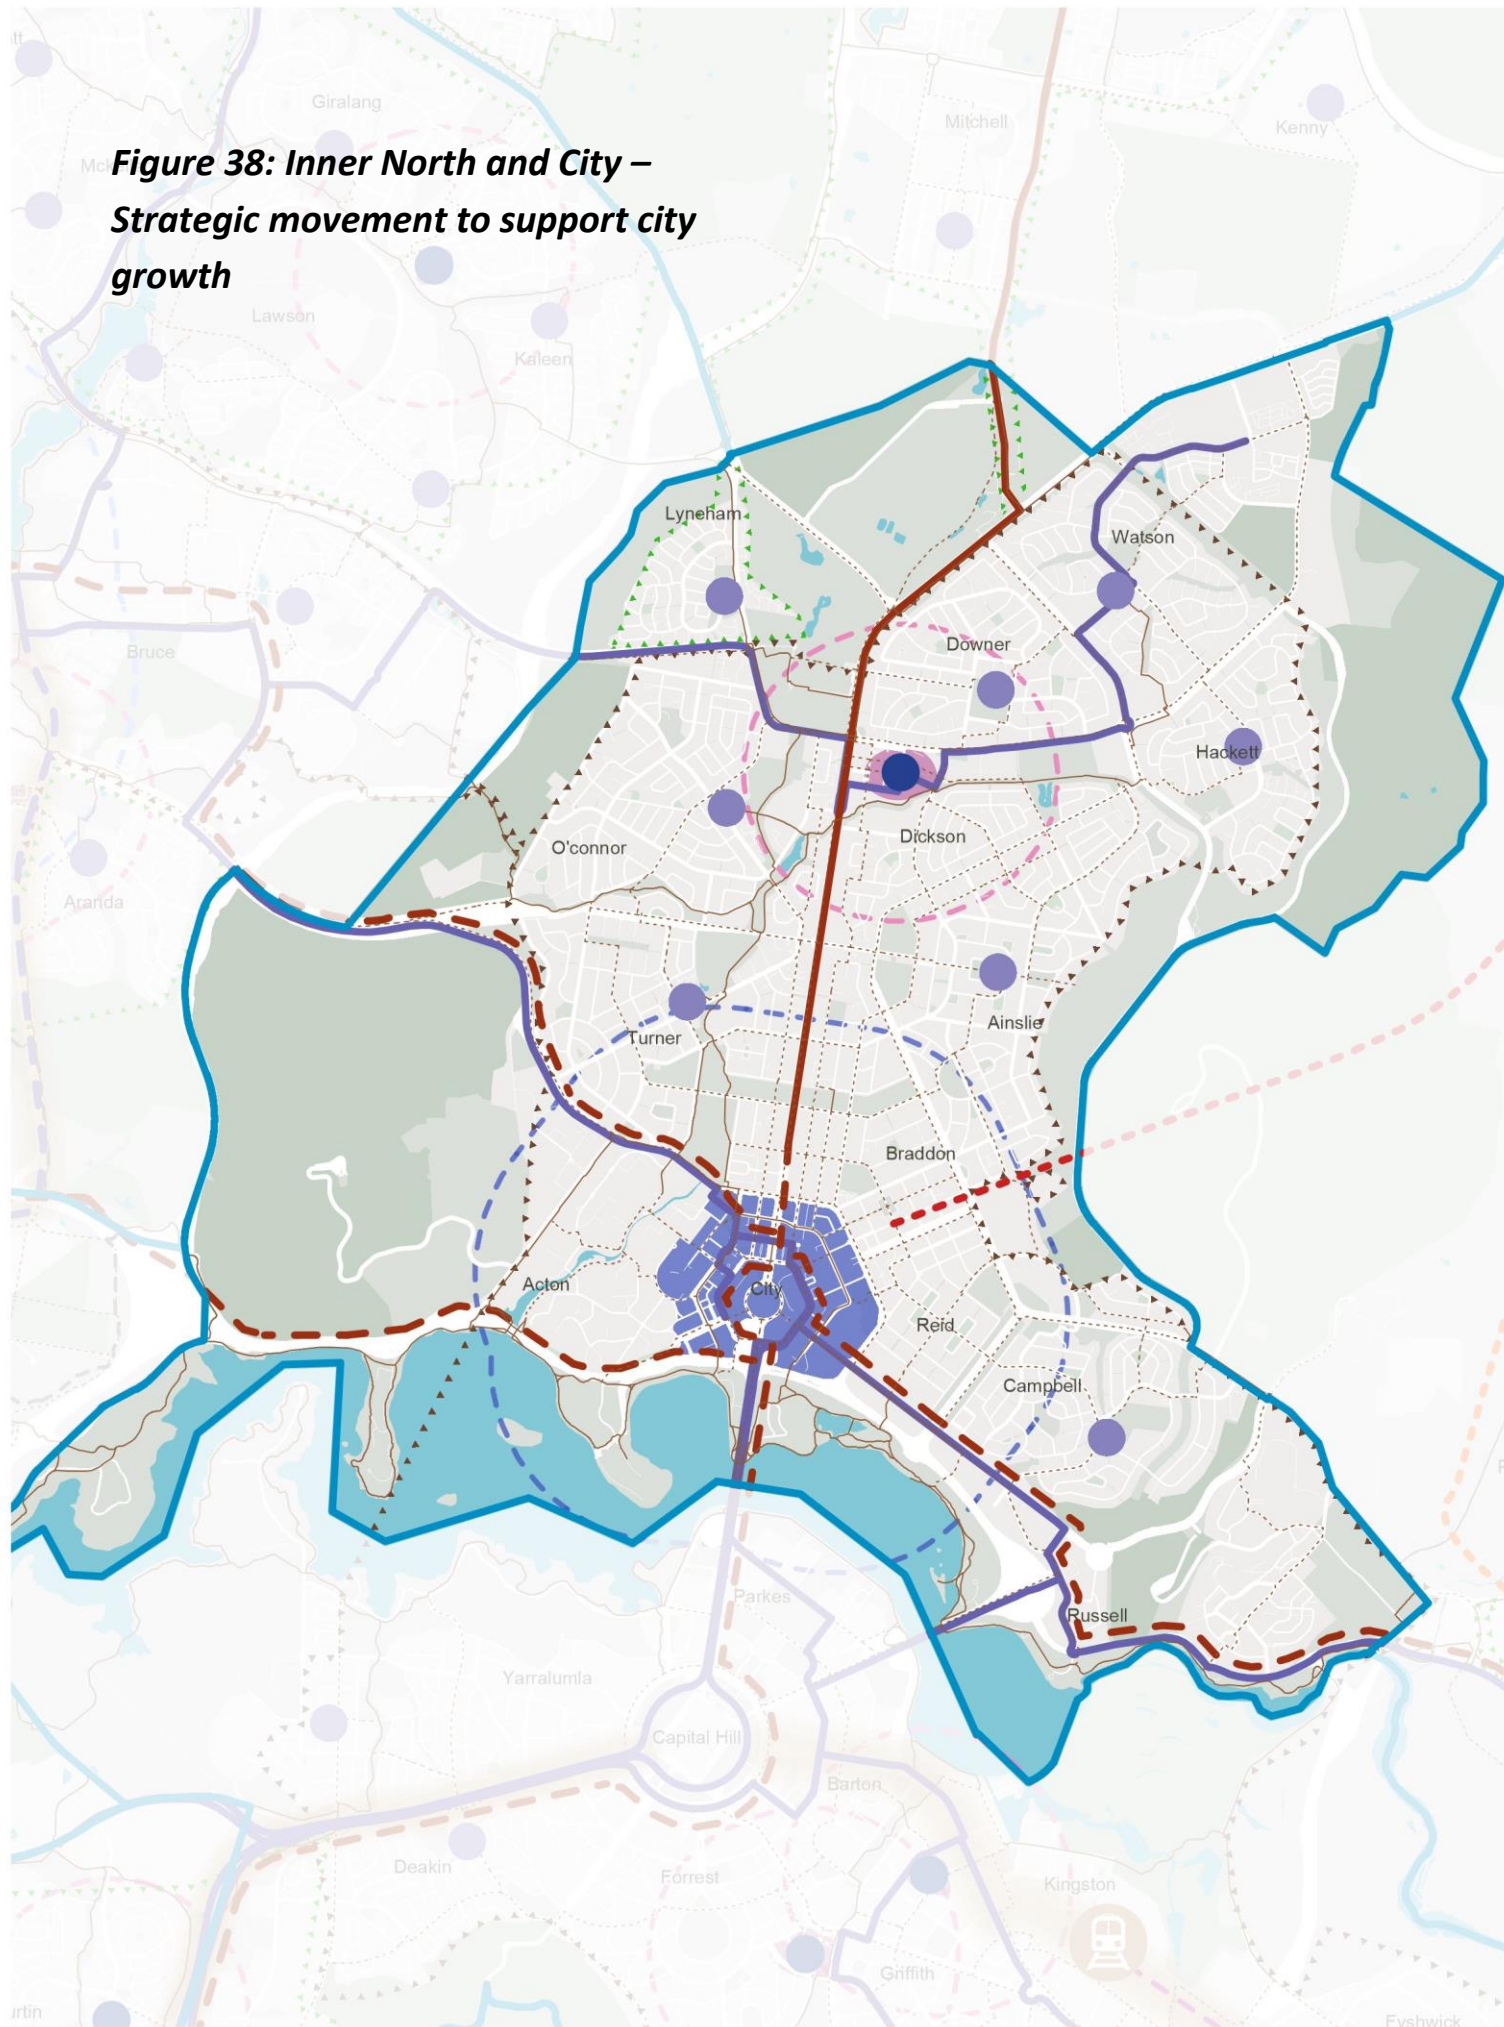

Detailed, co-ordinated planning with many of the City Centre's transport stakeholders will make sure it becomes a multimodal transport hub. Future light rail alignments will be integrated with the existing bus interchange and bus operations, with complementary measures to prioritise active and public transport. In addition, enhanced connectivity to and from the City Centre for active travel will be prioritised, including linkages to Lake Burley Griffin, Acton and other inner-city suburbs.

As the population of the district continues to grow, new public transport connections and other measures may be needed to facilitate movement within the district. The Northbourne Avenue corridor is already utilised to a high proportion of its capacity for public transport and road traffic.

Table 13: Inner North and City initiatives – Strategic movement to support city growth

Initiatives	Implementation pathway	Timeframe
Deliver the light rail corridor from Alinga Street to Commonwealth Park.	4	Short term
Continue investigations and planning for future light rail corridors, including potential link between Belconnen and Canberra Airport which will travel through the City Centre.	4	Medium term
Undertake detailed planning for the City Centre and its future as a multimodal transport hub, including: <ul style="list-style-type: none"> integration of future light rail routes and implications for orientation and location of the City Centre bus interchange establishing a clear hierarchy of movement and prioritisation of transport users identifying ideal future locations for bus layovers to avoid conflict with other uses. 	4 10	Long term
Investigate options for increasing capacity of public transport network in the Northbourne Avenue corridor and across the district to relieve demand pressures in advance of future population growth.	4	Long term
Expand the micro-mobility network to remaining areas in the north of the district and deliver other initiatives to facilitate an enhanced multimodal network in line with the implementation of the ACT Transport Strategy.	4	Short term
Implement upgrades to priority active travel routes identified in the implementation of the ACT Transport Strategy, including the Garden City Cycle Route, and other upgrades to improve walkability and connectivity of the City Centre.	4	Short term

Sustainable neighbourhoods

Figure 39 highlights proposed, possible and potential change areas and future investigation areas in Inner North and City District (based on the locations ranked in the top 25% for suitability across the ACT). The map illustrates the desired urban character in each of these locations, in line with the urban character types described in Section 3 and Appendix 1, ranging from the higher density urban core around the City Centre to the suburban character.

Further detailed analysis will be required to better understand both future demand for housing (based on revised population projections drawing on the results of the 2021 Census) and the best locations for this housing development within the future investigation areas. This analysis, in turn, will inform any changes to the Territory Plan and planning policies.

Further planning work will inform future development on the sites identified as proposed, possible and potential change areas. This work will make sure they are appropriate for development and can deliver the desired urban character as well as make a contribution to sustainability aims and active travel. Comments from the community suggest that Garden City principles should be influential in planning for future redevelopment.

In the City Centre, the potential establishment of a dedicated entertainment precinct may influence development outcomes including planning controls to mitigate noise and other impacts in residential areas. The principles and initiatives identified in the updated City Plan will also guide new development around the City Centre.

Figure 39 highlights areas between rapid transport network stops and centres outside of the City Centre, primarily in the Northbourne Avenue corridor and aligned with rapid transit routes. These are highlighted to make sure that any future renewal in these 'stop-to-centre' connection areas has a strong relationship and alignment between growth, transport infrastructure and access to amenities. A strong focus on the public domain should support this, illustrated by the four approaches to City Making and 'Urban Improvement' in Appendix 2. Having a greater mix of densities and uses in the centres identified may also be appropriate, subject to a detailed understanding of the need for different land uses at a metropolitan level.

An important part of delivering sustainable neighbourhoods will be addressing housing affordability. Planning and land release can contribute to addressing this by planning for a diversity of housing types and land supply to meet different needs and budgets. The continued delivery of actions under the ACT Housing Strategy will support the future development in the Inner North and City.

Table 14: Inner North and City initiatives – Sustainable neighbourhoods

Initiatives	Implementation pathway	Timeframe
Further detailed analysis and modelling to identify future housing needs not able to be met by change areas across Inner North and City District.	2	Short term
Detailed analysis and planning for Inner North and City future investigation areas to accommodate future housing and facilitate desired urban character based on suitability and transect analysis (see Appendix 1) and opportunities in identified 200m/400m stop-to-centre connection areas.	2 3 8	Short term
Continue planning for selected key sites according to ideas and principles described below (see principles for selected key sites and change areas).	8 11	Ongoing
Planning and development outcomes in the City Centre to be delivered based on principles and initiatives outlined in the revised City Plan.	2 8 10 11	Medium term
Implement the future entertainment plan as relevant to the City Centre including changes to planning controls for new development to mitigate noise and other impacts as appropriate in mixed-use areas.	3	Short term
Development precincts achieve improved tree canopy cover, permeability and urban heat outcomes when compared to similar previous precincts.	3	Ongoing
All development precincts to provide the infrastructure needed to deliver the zero carbon transition, with additional precinct-based initiatives to also be encouraged.	9	Ongoing
Implement planning and design provisions that encourage the supply of affordable, diverse and sustainable housing.	12	Medium term

Figure 39: Inner North and City – Sustainable neighbourhoods

This map illustrates the Inner North and City regions, highlighting sustainable neighbourhoods. The map is bounded by a thick blue line. Key areas are outlined in purple and filled with various patterns and colors: yellow with blue triangles, orange with blue triangles, red with blue triangles, and green with blue triangles. A central area is marked with a '1' in a circle. The map includes labels for various suburbs: Giralang, Mitchell, Kenny, Lawson, Kaleen, Lyneham, Watson, Downer, Hackett, O'Connor, Jackson, Ainslie, Braddon, Reid, Campbell, Russell, Parkes, Yarralumla, Capital Hill, Barton, Forrest, Kingston, Garth, and Deakin. The map also shows the Murrumbidgee River and the Murrumbidgee Highway.

Urban character types

The urban character types are not the same as and are not intended to replace the land use zones in the Territory Plan. Their application in each district and how they would inform changes to zoning requires further analysis, including a consideration of established character, the availability of infrastructure, heritage sites and values, environmentally sensitive areas, and natural hazards such as bushfire risk.

Scale at A4 1:50000

Inclusive local centres and communities

The district's group and local centres are generally vibrant and performing well. Further review of these centres (as part of the district strategy implementation) will confirm the priority centres where a program of planning and non-planning initiatives will be considered. The local and group centres review will consider aspects such as: retail and economic characteristics; community needs and access to services; housing opportunity; opportunity to capitalise on planned investments in and around the centre; proximity to current and future infrastructure and the Government's existing shopping centre improvement program objectives and criteria.

The district has many existing community facilities, including the City and Dickson libraries, arts facilities and Dickson and Civic Pools. With existing demand pressures on some facilities, including schools, and expected further growth of the population, new community and recreational facilities will need to be delivered in the district. Land will need to be identified and preserved (set aside) for community facilities as part of redevelopment projects and innovative delivery models given there will be limited land available in many instances. Expansions or enhancements to existing facilities may also need to be considered to meet future demand.

Facilities that are currently being planned or delivered include a new ambulance and fire and rescue station in Acton, upgrades to Campbell Primary School, a new destination play space in Watson and the Haig Park Community Centre. The redevelopment of the Canberra Theatre Centre as part of the Civic, Arts and Cultural Precinct will provide new arts facilities. Funding has also been allocated for upgrades to the Gorman House Arts Centre.

Analysis, which has considered the growth of the population based on the potential housing demand and the existing provision of facilities in the district, has indicated that further investigation will be needed into the demand and potential for new or expanded facilities including:

- schools and Early Childhood Education and Care (ECEC – including child care)
- a community centre and general community meeting spaces
- aged care places and facilities for older people
- indoor sports facilities
- outdoor sports courts.

Future planning for the group and local centres in the district could consider opportunities for these types of uses to be delivered. Identifying potential locations for any new facilities will require further detailed analysis and due diligence, consultation with the community and whole-of-government approaches to delivery. Responsibilities for different types of facilities rests with different directorates and agencies. The planning and delivery of community facilities needs to consider long-term factors, including who will fund and manage facilities over time, not just the initial capital costs involved or locating a suitable site. Ideally, facilities should be delivered in accessible locations and co-located with complementary uses in centres. Early Childhood Education and Care (ECEC) will be a key component of education when considering the future community facility needs to each district in the ACT.

As a higher density environment, it will be important to consider the need for quality children's outdoor play spaces.

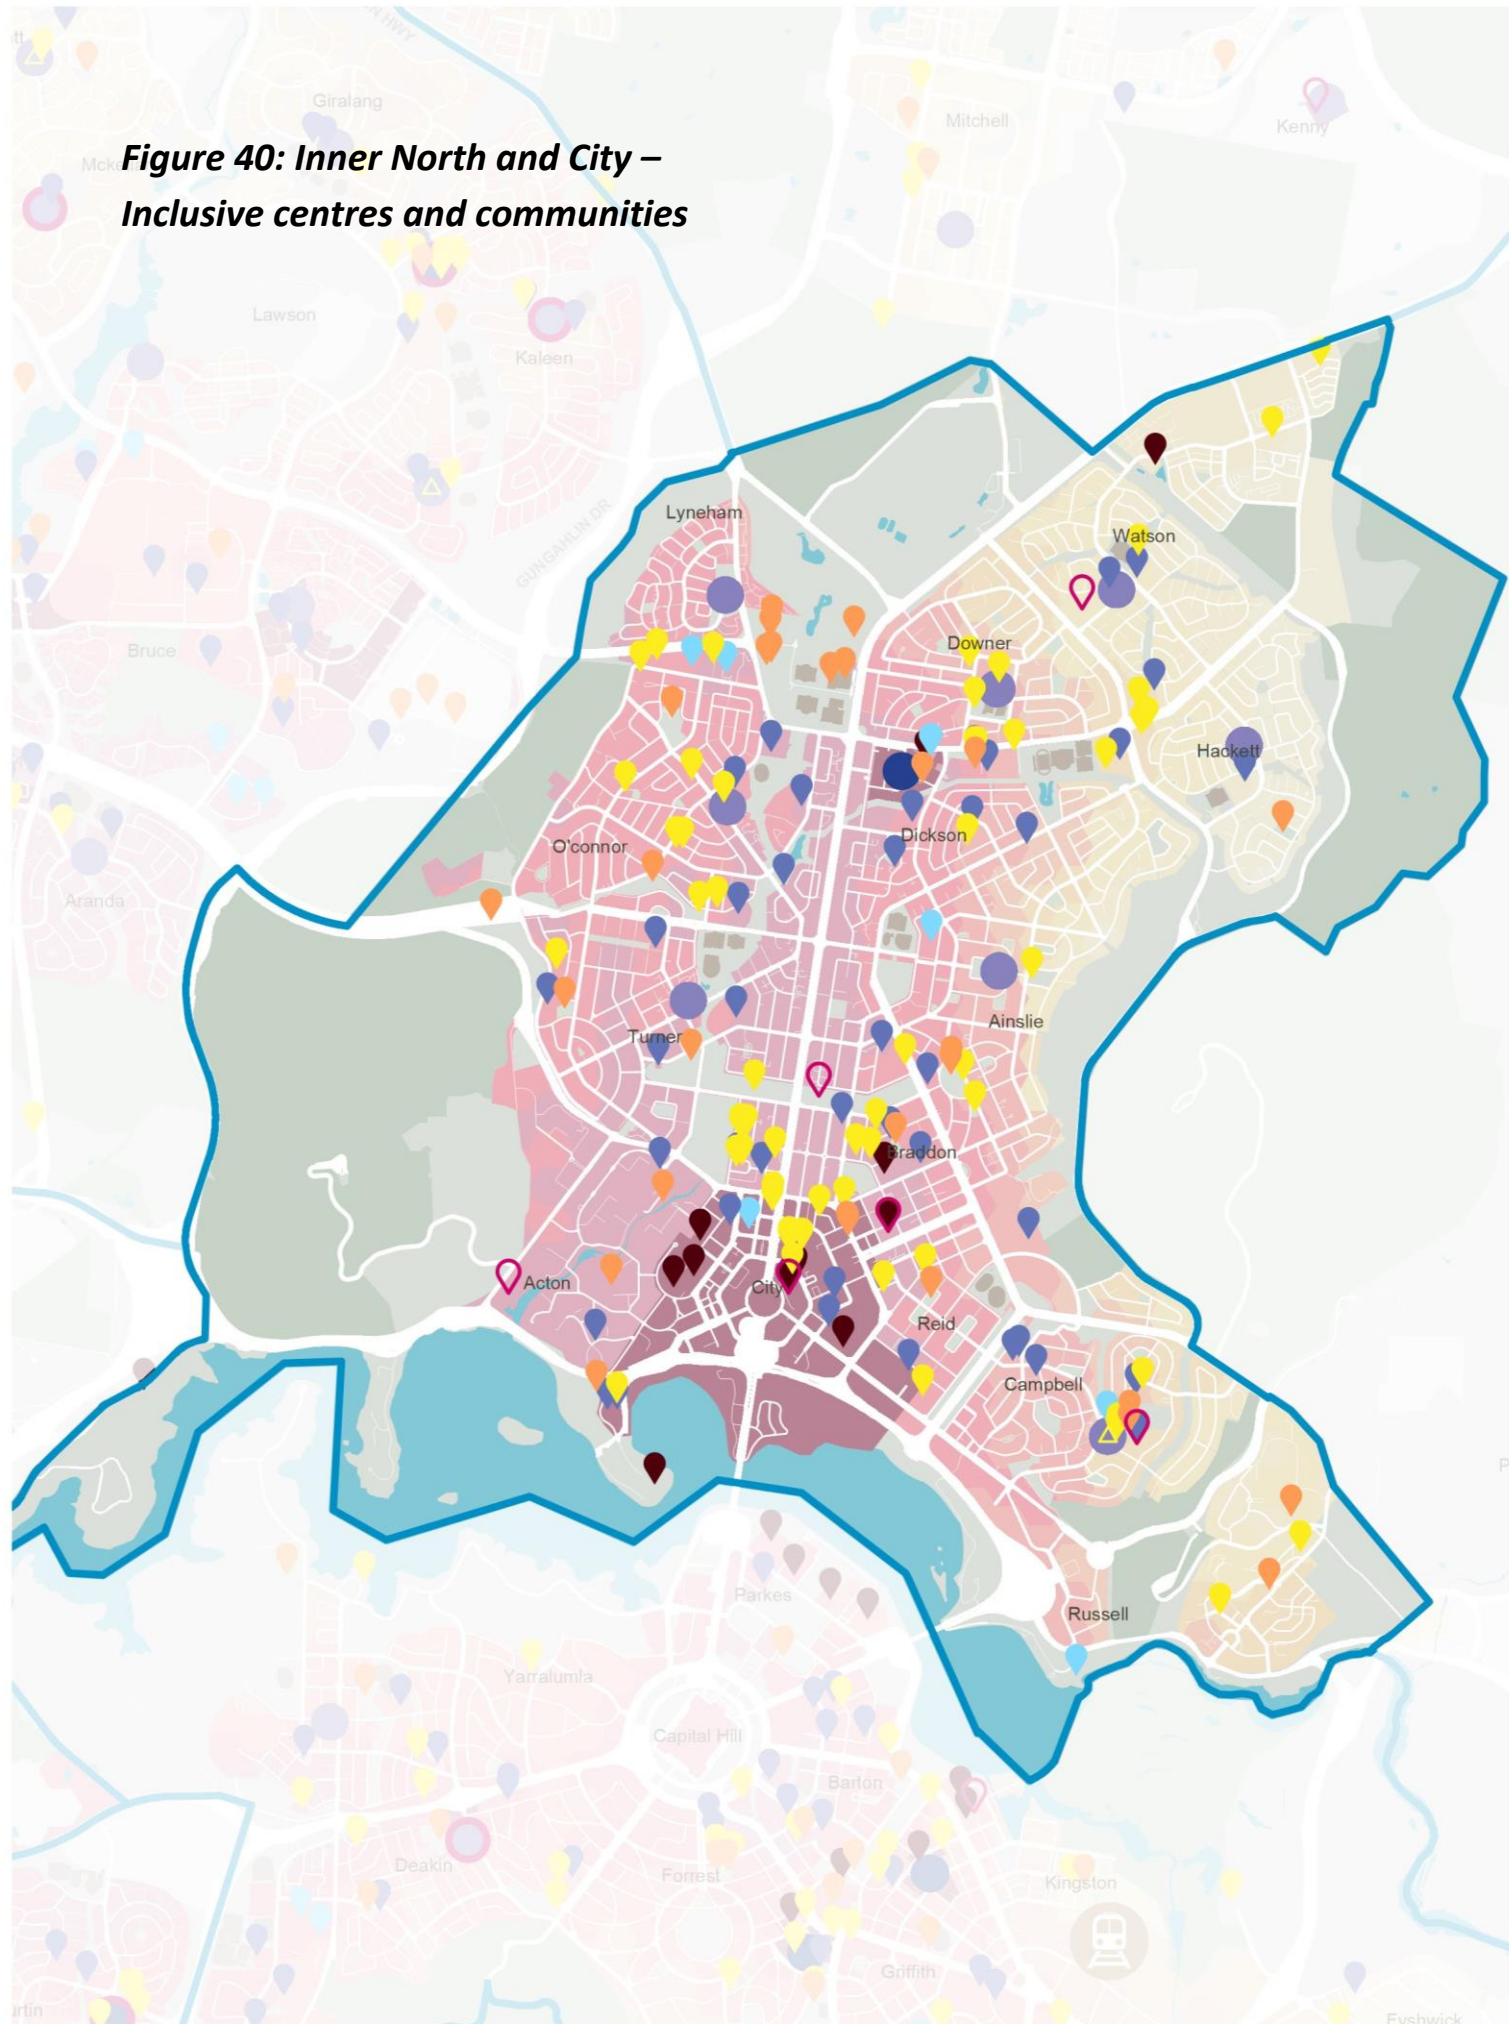

Table 15: Inner North and City initiatives – Inclusive centres and communities

Initiatives	Implementation pathway	Timeframe
Identify possible local centres for investigation of appropriate planning and non-planning initiatives to support their ongoing viability and role as a community meeting place.	7	Short term
Undertake detailed localised analysis to inform and confirm the need for new community and recreational facilities in Inner North and City District. This includes collaboration across government directorates and with community.	2 10	Short term
Make sure sufficient land (or floorspace capacity) is identified and preserved for social and community uses alongside residential growth to accompany areas of change in further detailed planning for the Inner North and City district including through appropriate Territory Plan policies.	2 3	Medium term
Investigate innovation in land assembly and delivery of community and recreational facilities in the Inner North and City where availability of land for new facilities is constrained.	10	Medium term
Deliver planned new community facilities including new Emergency Services Agency station in Acton, upgrades to Campbell Primary school, play space in Watson, Haig Park Community Centre, and new and upgraded arts facilities.	10	Short term
Deliver initiatives for community facilities in line with the updated City Plan.	2 10	Medium term

Planning for selected key sites and change areas

The district strategy plan identifies proposed, possible and potential key sites and change areas which may be suitable for a range of residential and non-residential uses (including consideration of education, health and recreation facilities). Key principles to guide future planning for a selection of these sites are provided below. This is conceptual only at this stage and put forward as early ideas for discussion. The planning for these sites is subject to further investigations and consultation.

Option A: Thoroughbred Park with racecourse

Any future development at this site should contribute to making an active ground level frontage to the Federal Highway, Flemington Road and light rail, creating a compact new centre offering recreation and commuter choice while retaining the racecourse. Higher density housing will be promoted close to light rail stops where possible, with lower densities in areas served by buses only. A full investigation of planning, environmental and infrastructure issues should be undertaken with reference to the following principles:

- Light rail boulevard – existing.
- Structuring streets / edge streets extend the Phillip Avenue axis and clarify the site's edges and structure.
- Walkable street grid with clear sight lines which add canopy trees and create regular urban blocks of one hectare or less and more walkable access locally.
- Park network which adds variety, canopy trees, WSUD and play opportunities, linear parklands beside Sullivans Creek.
- Community and retail facilities located prominently to create a destination and activity.
- Public activity hubs at key locations including medical and other services, amenities and cafes.
- Built frontage contributing to street identity, spatial definition and oversight of new public links.

Figure 41: Principles for Thoroughbred Park with racecourse

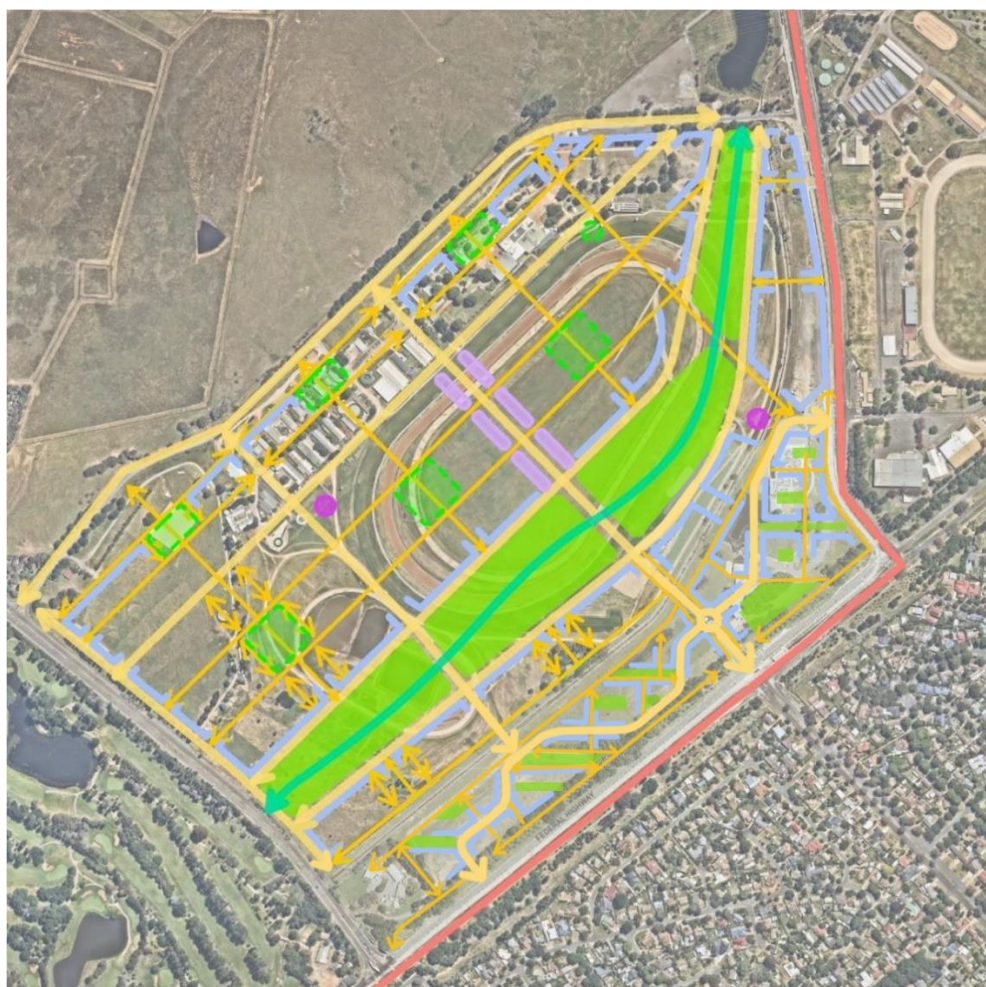

Option B: Thoroughbred Park without racecourse

Any future development at this site should contribute to making a positive built frontage to the Federal Highway, Flemington Road and light rail, creating a compact new centre offering recreation and commuter choice retaining the racecourse (shown with red dotted line and mask) until an alternative proves appropriate and viable. Higher density housing will be promoted close to light rail stops where possible, with lower densities in areas served by buses only. A full investigation of planning, environmental and infrastructure issues should be undertaken with reference to the following principles:

- Structuring streets / edge streets extend the Phillip Avenue axis across Northbourne Avenue and clarify the site's edges and urban structure
- Walkable street grid, add canopy trees, make urban blocks of one hectare or less and more walkable access locally
- Park network which adds variety, canopy trees, WSUD and play opportunities
- Community and retail facilities located prominently to create a destination and activity
- Public activity hubs at key locations including medical and other services, amenities and cafes
- Built frontage contributing to street identity, active frontages, spatial definition and oversight of new public links
- Re-naturalised Sullivans Creek offset alignment and generous corridor width for enhanced local area amenity and ecology – part of a city-wide blue-green network.

Figure 42: Principles for Thoroughbred Park without racecourse

Supporting infrastructure required

The Inner North and City's connection with the surrounding transport, utility and blue-green networks is central to planning for the city's civil infrastructure.

The City Centre was first developed as an urban area in 1922 and many areas are now located within heritage precincts. Existing infrastructure is built around Sullivans Creek, the Northbourne Avenue corridor and Lake Burley Griffin. The majority of the pit, pipe, cable and road network in the Inner North and City was first constructed prior to 1970, however the area has been subject to many infrastructure upgrades. Some existing infrastructure is operating at or near to capacity.

To support future growth in the district, a range of infrastructure initiatives and upgrades will need to be provided, including in the road and path network, WSUD, stormwater, sewer, water supply and electricity. Several projects are already planned or underway as shown in

Table 16. Further infrastructure capacity and augmentation feasibility studies will be required for the district to identify where existing infrastructure requires upgrading to support the delivery of this strategy and the district strategy plan. There are infrastructure capacity studies being undertaken across the ACT to provide comprehensive capacity analysis of urban renewal opportunities consistent with the ACT Planning Strategy 2018.

Road and path networks

The road network in the Inner North is already under capacity pressure. Strategic transport modelling indicates that key routes into the city will operate above 90% of its capacity by 2041. Current traffic growth will need to shift to other more sustainable transport modes, including light rail and active travel. Transport infrastructure projects will need to prioritise modal shifts and enhance connectivity, road user safety and amenity. When mode shifts are achieved, infrastructure projects will focus on improved network operations. Large-scale road network augmentation projects are therefore not anticipated.

The first light rail corridor from City to Gungahlin is the most significant public transport project within Inner North and City District. Light rail patronage and active travel participation is expected to continue increasing as connectivity to stops improves, and in response to vehicle congestion on key transport routes.

Water sensitive urban design (WSUD)

WSUD and stormwater infrastructure have many broader social, recreation and environmental benefits in addition to their importance as civil infrastructure. There are many areas where WSUD and riparian corridors will supply a multitude of outcomes, including as drainage lines and flood flows, catering for wildlife habitat and connectivity, active travel, and public access for passive recreation, as well as contributing to the amenity and aesthetics of the public realm.

The water quality network is limited due to the age of most stormwater infrastructure in the district. Network scale improvements investigated within the ACT Healthy Waterways project have been progressively improving stormwater quality in ACT catchments in recent years. A key measure has been water quality monitoring in the major lakes. There is a need to identify suitable sites for water quality improvement within urbanised areas. Urban intensification will also require additional development-scale WSUD measures to be implemented across the district.

The district is characterised by moderate opportunities for district scale stormwater upgrades, particularly the retrofitting of WSUD treatment measures along urban watercourses upstream of Lake Burley Griffin. Recent studies prioritise riparian corridors functions and values beyond floodways. This includes habitat and movement functions, active travel, microclimate management, Ngunnawal and European heritage, liveability and urban design.

Stormwater

The ACT's stormwater network is based on pit and pipe infrastructure in local catchments for minor flows. Major flows are conveyed in road reserves, urban floodways and drainage channels to the surrounding creeks, rivers and lake networks. Rainfall estimates, design methods and design philosophies have changed since the majority of the stormwater network was designed, including allowances for the impacts of climate change.

Climate change increases the demand on the stormwater network and the flooding hazard to the community. Urban intensification adjacent to waterways and overland flow paths will require ongoing assessment of public safety and property damage risks.

Inner North and City has a high level of stormwater network constraints and pipe flow capacity due to aging infrastructure and limited open space for network augmentation in many areas. Some sections of Parkes Way and Sullivans Creek are subject to localised flooding that would require additional flood storage and drainage upgrades to support urban intensification.

This assessment of risks will need to consider opportunities to retain water in the landscape through the use of permeable surfaces and WSUD to both manage water flows and allow water penetration to sustain vegetation and allow ground water recharge.

A stormwater harvesting and reuse network in the Inner North connects pond storages in Dickson, Lyneham and Mitchell with irrigated playing fields and other water uses in the district.

Wastewater

Icon Water manages the wastewater network. Key capacity constraints are known in North Canberra relating to the growth of the area and the capacity of trunk assets crossing Lake Burley Griffin and the trunk sewerage system on the south side of the lake which drains to the west. Major network upgrades will be required to accommodate growth in this district and further south in the Inner South Canberra and Woden districts.

Icon Water is currently assessing options for these upgrades to align with its overall Wastewater System Strategy, incorporating various scenarios of population growth as well as other future challenges for the network. These upgrades will likely be staged over coming years. The location of future urban developments will also need to provide sufficient access and clearance for additional sewerage assets to allow Icon Water to continue safely providing these services and minimise impacts on the community.

Water supply

Icon Water manages the potable water supply network. Modelling indicates there are currently no major capacity constraints. However, infrastructure ageing in this district is likely to require network upgrades or augmentations within the medium term.

Rapid population growth could also impact timing of planned infrastructure upgrades. Population projections will be critical for long term infrastructure planning due to the long lead time required for establishing new reservoirs.

Electricity

Evoenergy operates the electricity distribution networks within the ACT. Electrification of the energy system will continue with the phasing out of natural gas and internal combustion engine vehicles. Significant changes are also happening in the electricity market, including embedded generation networks and the ACT Government's legislated target of achieving net zero emissions by 2045.

Additional zone substation demand is expected as a result of the significant changes in the electricity network and urban intensification. Within the Inner North and City, the City East zone substation is modelled to require upgrade in the medium term. Construction of the Mitchell Zone Substation by 2030 will also support Inner North and City district loads.

Battery storage may also become a business-as-usual part of the electricity network for new suburbs and major redevelopment areas over time.

Planned infrastructure upgrades

The ACT Government is committed to providing for the infrastructure needs of a growing city. A summary of key planned capital works in the short term is summarised in Table 16. This infrastructure pipeline will continue to evolve in response to district needs, government policy and budget allocation.

Table 16: Planned infrastructure upgrades for Inner North and City

Sector	Project	Development agency
Transport	Central Canberra intersection traffic signalisations	TCCS
Stormwater	Parkes Way stormwater study	TCCS
Wastewater	North/South Canberra sewer upgrades	Icon Water
Water Supply	Reservoir/ Bulk supply upgrades	Icon Water
Electricity	City East Zone substation upgrade	Evoenergy
Transport	Light rail infrastructure from the City Centre to Commonwealth Park	MPC
Transport	Raising London Circuit	MPC
Urban Infrastructure	Campbell shops upgrade	TCCS
Transport	Garden City cycle route	TCCS

Appendix 1: Urban transect analysis and urban character types

Transect thinking

The district strategies apply a proven methodology for assessing opportunities for growth, based on enhancing urban character. This methodology is based on ‘transect thinking’ and integrates and complements the objectives developed for each of the five big drivers.

Transect thinking considers the different environments in which we live in a holistic way. It focusses on appropriate housing types, open spaces, parks, streets, amenities, facilities and services.

When applied in urban planning and design, a transect is a line or section through a city showing changes in types of urban environments. Transect thinking helps to address the different ways people like to live, providing different urban environments appropriate to their location and the people who live in them.

Transect thinking stems from the study of natural ecosystems. The natural transect describes the change in different natural zones and habitats, showing varying characteristics through different zones such as shores, wetlands, plain and uplands. It helps study the many elements that contribute to habitats where certain plants and animals thrive in symbiotic relationship to the minerals and microclimate.

An **urban transect** is generally at its most compact and dense in the City Centre and steps down through the built form as it moves further to the urban fringe. Typically, transect methodology supports a relatively smooth transition in built form; however, examples of juxtaposition of different heights and built forms provide appropriate contrast in certain environments.

Figure 43 highlights some examples of planning documents depicting these transect types or zones. The rural-to-urban transect is divided into six zones which vary by the level of intensity of their physical and social character (SmartCode Version 9.2, 2008, The Town Paper Publisher).

The six urban character zones of the rural-to-urban transect are typically described as:

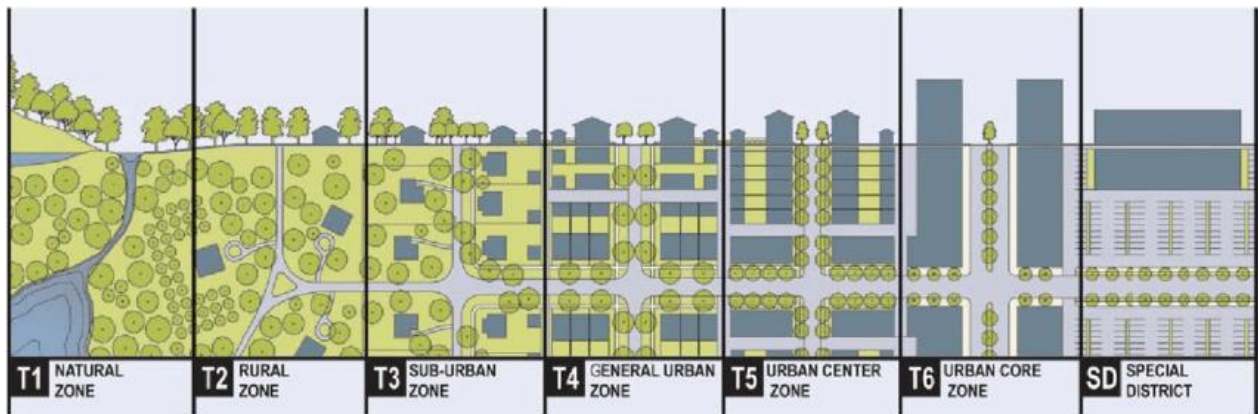

- T1 Natural, defined by a wilderness condition including lands unsuitable for settlement.
- T2 Rural, defined by sparse settlement, cultivation and agricultural lands with supportive buildings.
- T3 Suburban, defined by low-density residential areas with naturalistic planting.
- T4 General Urban, defined by a mixed-use but primarily residential urban fabric.
- T5 Urban Centre, defined by higher density mixed-use buildings.
- T6 Urban Core, defined by highest density and height with the greatest variety of uses.

The district strategies utilise the framework of the **urban Transect – the four urban character types from T3 to T6** – to describe the anticipated urban environment in each district.

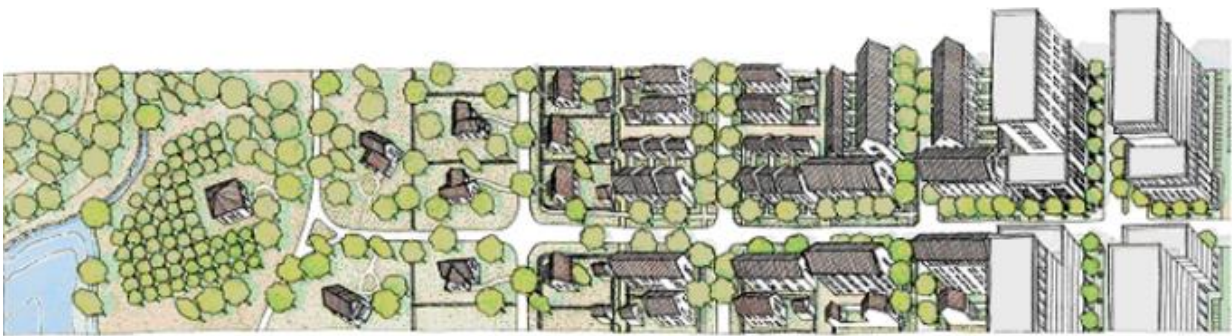

Note: The **urban character types** are not the same as and are not intended to replace the land use zones in the Territory Plan. Their application in each district and how they would inform changes to zoning requires further analysis, including established character, heritage sites and values, environmentally sensitive areas, and natural hazards such as bushfire risk.

The correlation between these urban character types and the current ACT Territory Plan zones is shown in Figure 44 below. It suggests that the current R22 Suburban Core Zone doesn’t have a ‘match’ with the suggested urban character types which should underpin planning for renewal and development in the ACT.

Figure 43: Examples of transect zones

Figure 44: Urban character types and correlation to current ACT Territory Plan zones

URBAN TRANSECT CHARACTER	T3 Suburban Zone Low density residential areas with naturalistic planting, characterized by large setbacks and irregular roads.		T4 General Urban Zone Mixed use but primarily residential urban fabric, wide range of housing types.	T5 Urban Centre Zone Higher density mixed use buildings, tight network of streets, shallow building setbacks.	T6 Urban Core Centre Highest density and height with the greatest variety of uses.
TERRITORY PLAN CHARACTER	RZ1 Suburban Zone Housing is low rise and predominantly single dwelling and low density.	RZ2 Suburban Core Zone Housing is low rise and contains a mix of single dwelling and multi-unit development that is low to medium density.	RZ3 Urban Residential Zone Housing is low rise and predominantly medium density, particularly in areas that have good access to facilities and services and/or frequent public transport services.	RZ4 Medium Density Residential Zone Housing is medium rise and predominantly medium density, particularly in areas that have very good access to facilities and services and/or frequent public transport services.	RZ5 High Density Residential Zone Housing is generally high density, particularly in areas that have very good access to facilities and services and/or frequent public transport services.
			CZ4 Local Centres Zone Convenient shopping and community and business services to meet the daily needs of local residents.	CZ2 Business Zone Provide for office and business sites that are accessible to public transport and convenience retailing and services.	CZ1 Core Zone Mix of predominantly commercial land uses.
			CZ5 Mixed Use Zone Diversity of living, working and recreation, with higher density residential development.		
				CZ3 Service Zone Conveniently located services and lower rent commercial activities, retail uses or entertainment facilities requiring larger sites.

Urban character types – urban design elements and principles

A series of urban design principles for each of the four urban character types are identified in the following pages for each of the urban design elements in Table 17. These were adapted to suit the different urban contexts of Canberra.

The principles and imagery provided for each of the four urban character types guides the development types, character and public domain qualities that will be expected in the areas where they are shown in each of the district strategy plans. This will inform the future requirements and desired outcomes that may be applied through the Territory Plan.

Table 17: Urban design elements

Context and character	Built form and housing diversity	Interface	Landscape and open space amenity	Sustainability amenity	Placement
Building types that enhance the identity of adjacent sites, streetscapes and the surrounding neighbourhood.	A bulk, scale and height appropriate to the desired future character, providing a diverse urban form that supports housing choice through a mix of scales for different needs and budgets.	Typologies that enhance the identity of adjacent sites, streetscapes and the surrounding neighbourhood.	A bulk, scale and height appropriate to the desired future character, providing a diverse urban form that supports housing choice through a mix of scales for different needs and budgets.	Typologies that enhance the identity of adjacent sites, streetscapes and the surrounding neighbourhood.	A bulk, scale and height appropriate to the desired future character, providing a diverse urban form that supports housing choice through a mix of scales for different needs and budgets.

Source: Tait Network, 2022.

URBAN DESIGN PRINCIPLES

Context and Character	Built form and housing diversity	Interface	Landscape and open space amenity	Sustainability and amenity	Placement
Low-density suburban context complementary to the existing character.	Deep setbacks to retain garden city character.	Residential interface.	Characterised by landscaped gardens surrounding detached dwellings.	Passive solar design and cross ventilation that reduces operation costs.	Existing and proposed suburban residential areas outside the local, group or town centre radius.
Low rise one and two storey dwellings.	Articulated massing that creates unique dwellings and defined sense of arrival.	Separation from the street through hedges and courtyard walls to retain privacy.	Naturalistic planted verges in keeping with the bush character of the suburbs.	Deep soil zones for groundwater recharge and vegetation that contributes to urban cooling.	Best adjacency to T2 Rural and T4 General Urban Zones.
Detached housing with building separation to retain privacy and private open space.	Diversity of block sizes to create housing choice.	Dwellings accessed through private entrances.	Mix of public parks, ovals and green links.	Active travel connections that link to wider networks and support pedestrian access services and amenities for short trips.	
Deep soil canopy trees provided on block.	On block canopy trees and block permeability through private open space.				

URBAN DESIGN PRINCIPLES

Context and Character	Built form and housing diversity	Interface	Landscape and open space amenity	Sustainability and amenity	Placement
Medium-density built context with a balance between landscaping and built form	Shallow to medium setbacks to begin to address the public realm.	Mixed-use interfaces around Local Centres with ground floor commercial uses.	Characterised by landscaped communal spaces and street interfaces.	Good solar access and cross ventilation that reduces operation costs.	Applied to the full radius of the local centre plus a 400m catchment to promote walkable neighbourhoods.
Medium rise of up to 3 storey apartment buildings.	Buildings are more compact with apartment typologies but remain detached from neighbours.	Separation from the street through commercial spaces or courtyard walls.	Private courtyard gardens and balconies	Living infrastructure and water collection provided through roof top gardens and green walls.	Best adjacency to T3 Suburban and T5 Urban Centre Zone.
Compact buildings with private balconies and terraces.	Articulated massing creates visual interest and defines the streetscape.	Dwellings accessed through shared common entrances.	Mix of public parks, ovals and green links.	Deep rooted canopy trees that contribute to urban cooling provided in shared spaces.	
				Active travel connections that link to wider networks support pedestrian access to services and amenities for short trips.	

URBAN DESIGN PRINCIPLES

Context and Character	Built form and housing diversity	Interface	Landscape and open space amenity	Sustainability and Amenity	Placement
Medium to high-density-built context consisting predominantly of built form.	Shallow front setbacks directly addressing the public realm.	Balconies and planted facades create privacy from the street.	Characterised by landscaped communal spaces and street interfaces.	Good solar access and cross ventilation that reduces operation costs.	Applied to full radius of the group centre plus a 200m catchment to promote strong urbanity in mixed-use precincts.
Medium to high rise up to 6 storey including mixed-use buildings to support vibrant amenity.	Attached buildings oriented to the street with aligned frontages to define a consistent streetscape.	Separation from the street through commercial spaces or courtyard walls.	Mix of neighbourhood parks, public plazas and green links.	Living infrastructure and water collection provided through roof top gardens and green walls.	Best adjacency to T4 General Urban Zone and T6 Urban Core Zone.
Compact buildings with private balconies and terraces and commercial ground floor.	Ground floors consist of commercial functions that engage with the street and create a vibrant pedestrian experience.	Dwellings accessed through shared common entrances.		Deep rooted canopy trees that contribute to urban cooling provided in shared spaces.	
				Active travel connections that link to wider networks support pedestrian access to services and amenities for short trips.	

URBAN DESIGN PRINCIPLES

Context and Character	Built form and housing diversity	Interface	Landscape and open space amenity	Sustainability and Amenity	Placement
<p>High-density built context with landscape subservient to the built form.</p> <p>High rise buildings greater than 6 storey consisting of mixed-use with provision of entertainment, civic and cultural uses.</p>	<p>No front setbacks with direct engagement with the public realm.</p> <p>Attached buildings oriented to the street with aligned frontages to define street walls.</p>	<p>Integration of building and public domain</p> <p>Ground floor commercial uses or public forecourts.</p> <p>Dwellings accessed through shared common entrances.</p>	<p>Characterised by public plazas with both public and private activity.</p>	<p>Good solar access, cross ventilation and shared amenities that reduces operation costs.</p> <p>Living infrastructure and water collection provided through roof top gardens and green walls.</p> <p>Deep rooted canopy trees that contribute to urban cooling provided in shared spaces.</p> <p>Active travel connections that link to wider networks support pedestrian access to services and amenities for short trips.</p>	<p>Applied to town centres</p> <p>Best adjacency to T5 Urban Centre Zone.</p>

Appendix 2: City making and ‘urban improvement’

Four types of ‘urban improvement’ and the contexts in which they should be applied are described below. They include a series of specific initiatives and treatments. These will not necessarily be applied in all circumstances or all districts, but the aim is for new development in Canberra to allow for diversity while also contributing wider benefits to the community.

1. Achieving multimodal boulevards

This type of ‘urban improvement’ can apply where rapid transit or light rail is planned:

- Design the corridor as a multimodal boulevard, including linear cycleways and pedestrian paths. Maximise urban tree canopy to moderate urban heat. Locate light rail or bus stops at intersections with blue-green network crossings in preference to busy traffic intersections.
- Introduce crossings to improve cycle and pedestrian safety and access to stations / stops. Improve connection between centres, schools, universities, hospitals and parks with light rail / transit stops.
- Incorporate public frontage and include ground floor activation in new buildings.
- Provide public frontage and oversight of passengers at stations / stops and the boulevard.

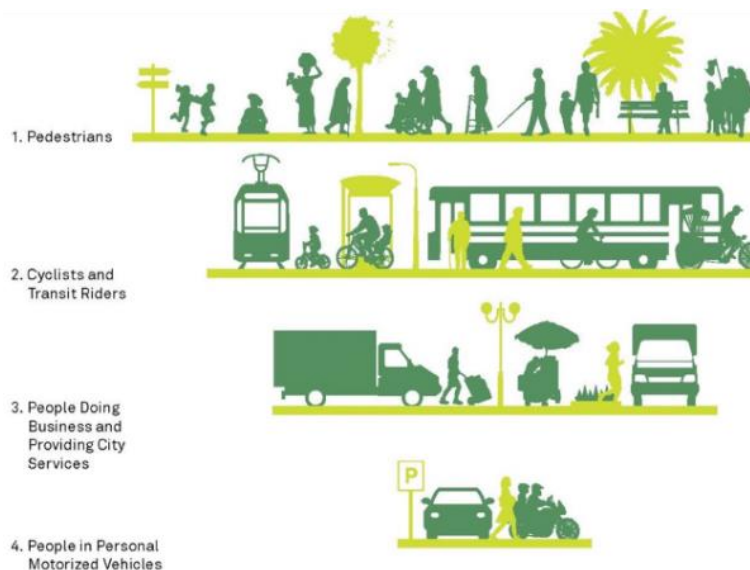

Desired outcome – Make traffic-dominated parkways suitable for rapid transit

Remodelling of Paseo de St Joan, Barcelona, prioritises pedestrian movement and makes a green urban corridor.

Design credit – Lola Domènech. Photo credit – Metalocus

<https://www.metalocus.es/en/news/redevelopment-passeig-de-sant-joan-phase-2>

Boulevards re-balance the needs of varied uses and prioritise pedestrian movement.

Existing state

Some of Canberra's transport corridors are physically alienated from the neighbourhoods they need to serve.

Large urban sections discourage neighbourhood walking, predisposing people to using a car for local trips to centres, schools, universities, hospitals, parks and neighbours in other streets.

The Australian Heart Foundation and health authorities promote walkable neighbourhoods to help reduce preventable disease.

'Urban improvement' approach

1. Locate new connections to align with the existing street pattern.
2. Redevelop the adjoining sites with buildings that face on to the street.
3. Provide generous ground floor heights (4.2m or more, floor to floor) to accommodate commercial activities that attract people to the street.
4. Consolidate deep soil landscapes in the centre of urban sections and along public frontages.

2. Realising lively centres

This type of ‘urban improvement’ can apply where development is planned in an existing centre:

- Provide a new square for the community
- Relocate surface parking to perimeter streets
- Include a mix of uses with ground floor activation.

Group and local centres close to light rail and rapid transit stops are identified in the relevant district strategy plan (designated as stop-to-centre connections). Such centres are particularly suited to these improvements.

Areas between the centre and rapid transit stop are particularly suited to redevelopment with additional housing.

Desired outcome – Build on the liveliness associated with activities located together, in and near centres

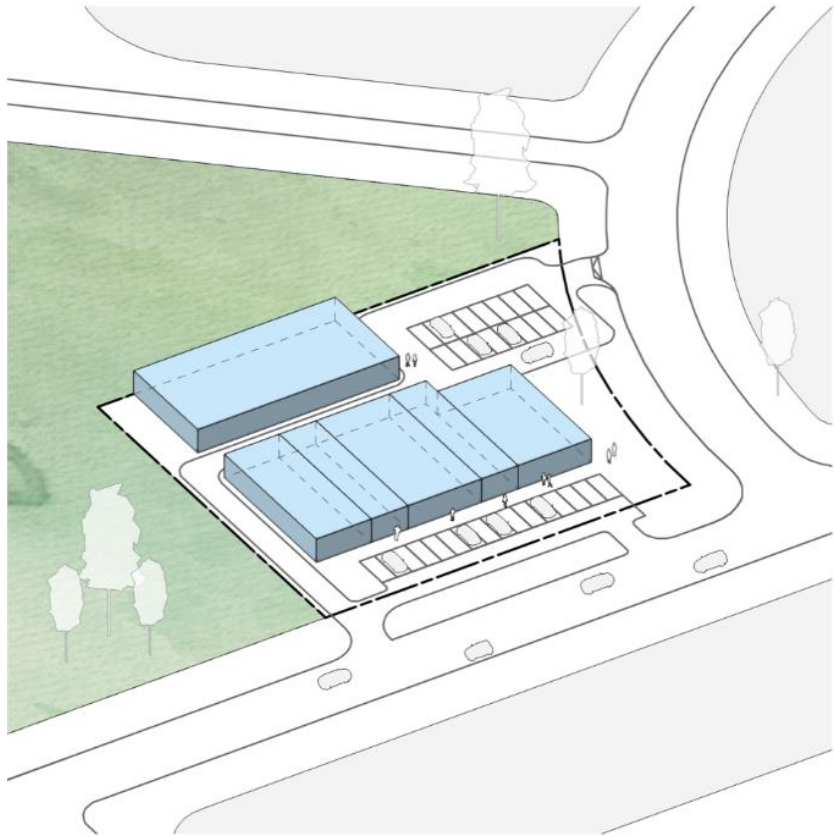

Green Square Kingston group centre. Photo credit <https://www.tripadvisor.co.uk/LocationPhotoDirectLink-g255057-d3846046-i371883212-Bittersweet-Canberra-Australian-Capital-Territory.html>.

Existing state

Centres with buildings set back from their public edges or presenting loading docks, service areas, rubbish bins and the like, diminish the centre's presentation, character and identity in the locale.

Large areas of paving for the exclusive use of vehicles for parking and circulation lowers urban value, denying liveliness to nearby uses.

Centres which are zoned for or dominated by single use retail or commercial centres will be denied the liveliness associated with centres where a mix of shops, community facilities, small businesses and housing are located together or next to each other.

'Urban improvement' approach

1. Provide a public street or lane frontage to all centre boundaries.
2. Upgrade local streets to support increased density, including footpaths, cycleways, canopy trees, water treatment beds and the like.
3. Make a new community plaza and upgrade adjacent public space to include play, shelters, BBQs and space for events.
4. Relocate car parking to upgraded edge streets.
5. Provide varied building height up to 4.5 storeys, with generous ground floor heights (4.2m or more floor to floor) to accommodate street activating uses.

3. Shorten or reduce the area of urban sections to make a more walkable Canberra

This type of ‘urban improvement’ can apply if development is planned in an urban section longer than 180 metres or more than 1.2 hectares in area:

- Incorporate a new public through-block connection, 6–9 metres wide
- Provide public frontage / ‘address’ to the street to provide oversight of the space
- Locate to improve walking access to all centres, schools, universities, hospitals, light rail / transit stops and parks.

Desired outcome – Link community benefit to development uplift

In contrast to this example, development needs to contribute to the walkability of a place with through block connections. These should extend public connections from existing streets.

Consolidated deep soil landscape would admit urban tree canopy, improve on-site and neighbourhood amenity and counter urban heat.

Photo Credit – ACTMapi

Through block connections encourage walking. Narrow links lack public frontage and oversight. Wider connections add to the diversity of the public space network and improve public safety.

Photo credit – Surry Hills Sydney, Hill Thalys photo library.

Existing state

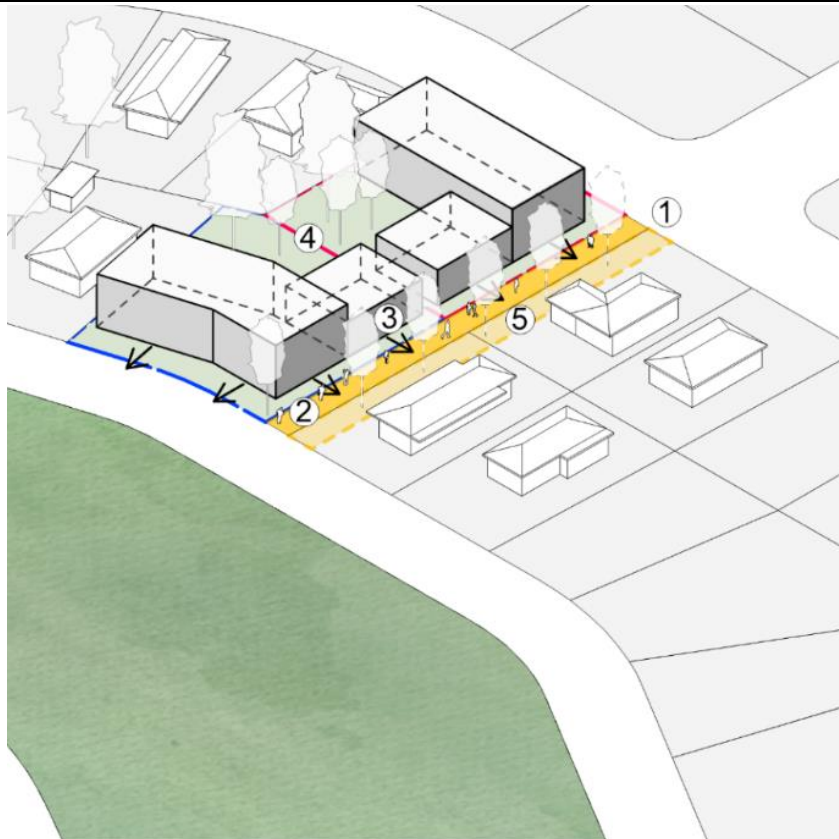

Large urban sections discourage neighbourhood walking, predisposing people to using a car for local trips to centres, schools, universities, hospitals, parks and neighbours in other streets.

The Australian Heart Foundation and health authorities promote walkable neighbourhoods to help reduce preventable disease.

'Urban improvement' approach

1. Make a new link close to an existing street:
 - 3m wide for a section with public frontage up to 15m wide.
 - 4.5m wide for a section with public frontage greater than 15m wide.
2. Provide a new footpath and dedicate the new link as public land.
3. Provide built address to public frontages with a range of building types up to 3.5 storeys in height.
4. Consolidate deep soil landscapes in the centre of the urban block and along public frontages.
5. Redevelop opposite – on the other side of the new link – with the same criteria above to complete a 6m–9m wide link over time; provide tree planting and/or swales in the widened link, as appropriate, and expand the public dedication of the link.

4. Accessing Canberra's green network

This type of 'urban improvement' can apply if development is planned beside a park (public open space):

- Introduce new public links to expand barrier free access to parks
- Incorporate a second public frontage/built address to provide oversight of the park.

Desired outcome – Barrier free access to public space, and safety in public space

Built form overlooking Hassett Park, Campbell. Design Credit – Jane Irwin Landscape Architecture and Hill Thalix. Photo credit – Dianna Snape

Existing state

Some parks in Canberra are poorly connected to the local neighbourhood they are intended to serve.

Some parks are edged by back fences, making them less safe.

'Urban improvement' approach

1. Make a new link close to an existing street:
 - 3m wide for a section with public frontage up to 15m wide.
 - 4.5m wide for a block with public frontage greater than 15m wide.
2. Provide a new footpath and dedicate the new link as public land.
3. Provide built address to public frontages with a range of building heights and up to 6 storeys on park frontages.
4. Consolidate deep soil landscapes in the centre of the urban block and along public frontages.
5. Redevelop on the other side of the new link with the same criteria above to complete a 6m–9m wide link over time; provide tree planting and or swales in the widened link, as appropriate, and expand the public dedication of the link.

Appendix 3: District strategy implementation plan

This District Strategy was released in 2023. The [Planning Act 2023](#) requires that the Executive must, at least once every 5 years after making a district strategy, consider whether the strategy should be reviewed.

The District Strategy is guided by this implementation plan to track and monitor progress and guide the delivery of actions, programs and projects. The district strategy is comprised of five ‘big drivers’ and underpinned by a range of targets and 12 implementation pathways and actions that span the full continuum of metropolitan and district planning. The numbering of the implementation pathways is not a reflection of an order of priority.

Implementing the district strategies involves a whole-of-government effort. Directorates are working together to deliver the actions, programs and projects and monitor and report on progress and outcomes under the implementation plan.

The implementation plan is in two parts:

1. Common to all districts (city-wide) priority actions, programs and projects for the 12 implementation pathways
2. District-focussed initiatives for the 5 big drivers.

Timeframes and definitions:

- Short-term: next 5 years (2023 – 2028)
- Medium-term: next 10 years (2023 – 2033)
- Long-term: next 20 years (2023 – 2043)
- Longer term: 20+ years (2043+)
- Ongoing: action has commenced and is progressing as part of a rolling or continuing commitment.

Indicators are measures of success named and quantified (where possible).

Not all of the initiatives in the implementation plan are formal commitments or have budget funding. Items in the implementation plan may require consultation, government decisions and budget processes.

City-wide implementation pathways and actions

IMPLEMENTATION PATHWAYS AND ACTIONS	TIMEFRAME	DIRECTORATE RESPONSIBLE	INDICATOR
1 Blue-green network preservation and expansion: Enhancing and filling gaps in the blue-green network, delivering initiatives set out in environmental policies and legislation, and enhancing blue-green features through new development.			
Continue to collaborate with the Dhawura Ngunnawal Caring for Country Committee (DNCCC) on opportunities to provide input on knowledge, culture and traditions.	Short term	EPSDD	Ongoing engagement with DNCCC.
2 Detailed planning for future housing and employment: Further analysis, research and investigations to inform more detailed planning for future employment floorspace and housing.			
Investigate the R22 Suburban Core Zone to determine why the existing built form does not demonstrate the intended variation of housing typologies between RZ1 and R22 zone.	Short term	EPSDD	ACT R22 Suburban Core Zone Study completed.
Undertake further detailed analysis and modelling to identify future housing needs not able to be met by change areas across districts.	Short term	EPSDD	Indicative Land Release Program
Undertake further detailed analysis of transect work for future investigation areas.	Short term	EPSDD	Future housing needs met.
3 Territory Plan – applying urban character and design principles: Changes through the statutory planning system and Territory Plan, such as rezoning or implementation by district policies or zone policies.			
Prepare district policies for each district in the Territory Plan.	Short-term	EPSDD	District policies completed.
4 Transport and land use in integration: Integration of land uses in planning for infrastructure projects like light rail and transport network development.			
Undertake planning to inform the design of the future light rail corridors.	Ongoing	EPSDD TCCS MPC	Planning for light rail corridors completed.
5 Employment and economic focus areas: Selected centres will be a focus for enhanced economic development and employment outcomes through targeted planning and investments and policy initiatives.			
7 Selected group and local centres revitalisation: Targeted support and interventions to address declining local centres particularly those where socio-economic indicators are below the Canberra average.			
Undertake a detailed investigation of ACT local centres and retail planning. This study related to the above ACT R22 Suburban Core Zone Study, since many of the R22 zones surround local centres and would benefit from their intensification.	Short term	EPSDD lead TCCS CMTEDD	ACT Local Centres and Retail Planning Study completed.
6 Establish new innovation precincts: Enhance the economic contribution of geographic areas where high value industry, research, health and education institutions and elite institutions are clustered together by enhancing physical and networking connections through targeted planning, investment and coordination initiatives.			
Undertake targeted planning, investment and coordination initiatives to establish new innovation precincts.	Ongoing	CMTEDD – Economic Development	New innovation precincts established.
8 City making and urban improvement: Development in key precincts contributes to remaking the city through ‘urban improvement’ – including improvements to streets and public domain.			
Undertake more work on the concept of a new ‘urbanising agent’ or governance models to facilitate significant redevelopment and urban improvement.	Short term	EPSDD	Urban improvement projects facilitated.
9 Precinct-based zero carbon initiatives: Precincts and larger scale development sites should test the scope for precinct-based initiatives that contribute to the ACT’s 2045 Net Zero Emissions target, as well as broader resilience outcomes.			
Provide the infrastructure needed to deliver the zero-carbon transition, as well as supporting and encouraging building owners and development proponents to transition.	Ongoing	EPSDD	2045 Net Zero Emissions target met.
10 Integrated infrastructure planning: Integrated planning and delivery of infrastructure to support growth, including civil infrastructure, environmental upgrades and management, and community and recreational facilities.			
Undertake a broader assessment of community, sport and recreation facilities of needs across the ACT to help fill the gaps identified in the district strategies.	Short term	EPSDD TCCS	ACT Community, Sport and Recreation Facilities Needs Assessment completed.
Undertake a study to develop planning and design parameters for Yarra Glenn and any other complex strategic sites in the light rail corridor from the City Centre to Woden.	Short term	EPSDD	Planning for light rail corridors completed.
11 Governance for comprehensive redevelopment: New ‘urbanising agent’ or governance models to facilitate significant redevelopment and urban improvement.			
Undertake more work on a governance model for consideration by Government.	Short term	EPSDD	New ‘urbanising agent’ or governance model.
12 Social and affordable housing contributions: Investigation of future initiatives to support increase social and affordable housing in Canberra, including inclusionary zoning.			
Investigate planning and design provisions that encourage the supply of affordable housing, such as inclusionary zoning.	Medium term	EPSDD	ACT Housing Strategy implemented.

Inner North and City implementation plan – big drivers and initiatives

BIG DRIVERS AND INITIATIVES	PATHWAY	TIMEFRAME	DIRECTORATE RESPONSIBLE	INDICATOR
1 Blue-green network				
Protect and restore riparian and aquatic corridors across the district, including re-naturalisation of Sullivans Creek and its tributary waterways to enhance linkages with Banksia Street Wetlands, Dickson Wetlands and Lake Burley Griffin.	1	Ongoing	TCCS	Riparian and aquatic corridors protected and restored.
Enhance and restore habitat value to existing open space throughout the suburbs to facilitate connectivity for fauna and flora (including threatened species) between nature reserves in the west, north and east, including: <ul style="list-style-type: none"> from Mount Ainslie, through Haig Park, across to Sullivans Creek through O'Connor and the Banksia Street Wetland, continuing up to Lyneham Ridge from Lyneham Ridge along Banksia Street Wetland and Sullivans Creek through to Mount Majura Nature Reserve the active travel corridor and Sullivans Creek past Daramalan College, Dumaresq Street and Phillip Avenue through to Mount Majura Nature Reserve Mount Majura Nature Reserve through to Crace Grasslands Nature Reserve Bruce Ridge to Lyneham Ridge across to Crace Grasslands Nature Reserve Bruce Ridge to the foreshore of Lake Burley Griffin and across to Anzac Parade, Mount Ainslie and across to Mount Pleasant Nature Reserve. 	1	Medium term	TCCS	Habitat value enhanced and restored.
Investigate expansion of Mount Majura Nature Reserve to include Hackett Horse Paddock.	1	Short term	EPSDD	Mount Majura nature reserve expansion investigated.
Implement enhanced water sensitive urban design (WSUD) and ecologically sensitive urban design (ESUD), green space and tree canopy cover as part of all future development proposals in the district to contribute to achieving living infrastructure targets, reducing urban heat and improving environmental outcomes in built up areas.	3	Short term	EPSDD	Territory Plan updated.
Utilise and enhance the green network to provide greater amenity and connectivity as outlined in the map, including links around Lake Burley Griffin and linking to northern suburbs via the periphery of Mount Ainslie.	1	Ongoing	TCCS	Green network enhanced.
2 Economic access and opportunity across the city				
Undertake ACT-wide analysis of capacity and demand for employment floorspace to inform planning for key centres including the City Centre and Dickson group centre, as well as Braddon and the Macarthur Northbourne Avenue precinct and, including capacity to meet strategic employment outcomes.	2, 5	Short term	EPSDD	Employment floorspace needs met.
Review planning and other regulatory controls in the City Centre to preserve sites for commercial uses and restrict residential development where appropriate, informed by ACT-wide analysis of need for employment floorspace to reflect the future entertainment plan as relevant to the City Centre.	2, 3, 5	Short term	EPSDD	Land use needs met.
Deliver economic initiatives for the City Centre in line with revised City Plan, including a future economic study.	2, 10	Medium term	CRA	City Plan revised.

BIG DRIVERS AND INITIATIVES	PATHWAY	TIMEFRAME	DIRECTORATE RESPONSIBLE	INDICATOR
Investigate potential for and develop innovation precincts based around three key areas within the Inner North and City: ANU/CSIRO and future UNSW campus (Acton, the City Centre and Reid), ACU and AIE in Watson, and defence focus in Campbell and Russell.	6	Medium term	CMTEDD	Innovation precincts investigated.
Continue planning for future redevelopment of EPIC site to enhance capacity as Canberra's primary venue for large events.	2, 3	Ongoing	CMTEDD EPSDD	Planning for EPIC completed.
3 Strategic movement to support city growth				
Deliver the light rail corridor from Alinga Street to Commonwealth Park.	4	Short term	TCCS MPC	Light rail network extended.
Continue investigations and planning for future light rail corridors, including potential link between Belconnen and Canberra Airport which will travel through the City Centre.	4	Medium term	TCCS MPC EPSDD	Future light rail corridors investigated.
Undertake detailed planning for the City Centre and its future as a multimodal transport hub, including: <ul style="list-style-type: none"> integration of future light rail routes and implications for orientation and location of the City Centre bus interchange establishing a clear hierarchy of movement and prioritisation of transport users identifying ideal future locations for bus layovers to avoid conflict with other uses. 	4, 10	Long term	TCCS	City centre planning completed.
Investigate options for increasing capacity of public transport network in the Northbourne Avenue corridor and across the district to relieve demand pressures in advance of future population growth.	4	Long term	TCCS	Public transport capacity investigated.
Expand the micro-mobility network to remaining areas in the north of the district and deliver other initiatives to facilitate an enhanced multimodal network in line with the implementation of the ACT Transport Strategy.	4	Short term	TCCS	Micro-mobility network expanded.
Implement upgrades to priority active travel routes identified in the implementation of the ACT Transport Strategy, including the Garden City Cycle Route, and other upgrades to improve walkability and connectivity of the City Centre.	4	Short term	TCCS	Priority active travel routes implemented.
4 Sustainable neighbourhoods				
Further detailed analysis and modelling to identify future housing needs not able to be met by change areas across Inner North and City District.	2	Short term	EPSDD	Future housing needs met.
Detailed analysis and planning for Inner North and City future investigation areas to accommodate future housing and facilitate desired urban character based on suitability and transect analysis (see Appendix 1) and opportunities in identified 200m/400m stop-to-centre connection areas.	2, 3, 8	Short term	EPSDD	Future housing needs met.
Continue planning for selected key sites according to ideas and principles described below (see principles for selected key sites and change areas).	8, 11	Ongoing	EPSDD	Planning for key sites continued.
Planning and development outcomes in the City Centre to be delivered based on principles and initiatives outlined in the revised City Plan.	2, 8, 10, 11	Medium term	EPSDD CRA	City Plan revised.
Implement the future entertainment plan as relevant to the City Centre including changes to planning controls for new development to mitigate noise and other impacts as appropriate in mixed-use areas.	3	Short term	EPSDD CRA	City entertainment precinct established.
Development precincts achieve improved tree canopy cover, permeability and urban heat	3	Ongoing	EPSDD	Tree canopy cover increased.

BIG DRIVERS AND INITIATIVES	PATHWAY	TIMEFRAME	DIRECTORATE RESPONSIBLE	INDICATOR
outcomes when compared to similar previous precincts.				
All development precincts to provide the infrastructure needed to deliver the zero carbon transition, with additional precinct-based initiatives to also be encouraged.	9	Ongoing	EPSDD TCCS	Zero carbon initiatives included in development.
Implement planning and design provisions that encourage the supply of affordable, diverse and sustainable housing.	12	Medium term	ESPDD	Future housing needs met.
5 Inclusive centres and communities				
Identify possible local centres for investigation of appropriate planning and non-planning initiatives to support their ongoing viability and role as a community meeting place.	7	Short term	EPSDD TCCS	Local centres for revitalisation program selected.
Undertake detailed localised analysis to inform and confirm the need for new community and recreational facilities in Inner North and City District. This includes collaboration across government directorates and with community.	2, 10	Short term	EPSDD	Community and recreational facilities identified.
Make sure sufficient land (or floorspace capacity) is identified and preserved for social and community uses alongside residential growth to accompany areas of change in further detailed planning for the Inner North and City district including through appropriate Territory Plan policies.	2, 3	Medium term	EPSDD	Community, sport and recreation needs met.
Investigate innovation in land assembly and delivery of community and recreational facilities in the Inner North and City where availability of land for new facilities is constrained.	10	Medium term	ESPDD CMTEDD CSD	Community, sport and recreation needs met.
Deliver planned new community facilities including new Emergency Services Agency station in Acton, upgrades to Campbell Primary school, play space in Watson, Haig Park Community Centre, and new and upgraded arts facilities.	10	Short term	JACS EDU TCCS	Community facilities delivered.
Deliver initiatives for community facilities in line with the updated City Plan.	2, 10	Medium term	EPSDD CRA	Community facilities delivered.

Appendix 4: References

The following key data sources, plans, policies and strategies have informed the preparation of the District Strategies, as well as more detailed technical material.

Glossary of terms

Activate: Improve the quality of places to attract more people to visit, gather and participate in activities there.

Active travel: Includes physical activity undertaken as a means of transport and not purely as a form of recreation. Active travel can include walking, cycling, skating, scootering, skateboarding and the use of mobility aids. Active travel also includes using any of these forms as incidental activity associated with the use of public transport.

Active travel network: The system of interconnected pathways used for cycling and walking.

ACT Planning Strategy: The strategy produced by the Environment, Planning and Sustainable Development Directorate titled ACT Planning Strategy 2018. The overarching strategic planning document that reflects and integrates the vision and directions of the community and other ACT Government strategies, particularly housing, transport and climate change. It provides a clear, robust and contemporary urban planning framework to guide our growth and prosperity into the future. It details five themes that will deliver on a vision for a sustainable, competitive and equitable Canberra:

1. compact and efficient
2. diverse
3. sustainable and resilient
4. liveable
5. accessible

ACT planning system: Legislation, policies, rules, plans and strategies that guide and inform planning and development in the ACT.

Adaptable housing: Housing that complies with Australian Standard AS4299 Class C Adaptable Housing and is designed to cater for people of all ages and abilities. Adaptable housing provides greater housing choices and means it is easier for people to 'age in place' where they feel comfortable, for example a home that is wheelchair accessible

Affordable housing: Housing that is appropriate for the needs of a range of very low to moderate income households, and priced (whether mortgage repayments or rent) so these households are able to meet their other essential basic living costs. It differs to social housing which is provided and/or managed by the government (public housing) or by a not-for-profit organisation (community housing).

Amenity: Desirable or useful features of a place that provide convenience, comfort or enjoyment.

Area planning: Planning at a district level to bridge the gap between ACT-wide and local area planning to provide an opportunity to build on existing and emerging government policies, plans and strategies.

Baseline: A minimum or starting point for comparison. The District Strategies include baseline employment forecasts in each district.

Biodiversity: The variety of life in all its forms and at all levels of organisation, as well as the ecological and evolutionary processes through which genes, species and ecosystems interact with one another and with their environment.

Blocks and sections: Are how areas of land are identified in the ACT. The city is divided into divisions, suburbs, sections and blocks. The Territory Plan zoning determines what activities/uses can occur on the blocks. Blocks are usually leased to one entity.

Blue-green landscape/infrastructure/network: ‘Blue’ refers to waterways including creeks and wetlands within the landscape. ‘Green’ refers to the trees, urban forests, gardens, parks and open space.

Boulevard: A broad avenue with rows of street trees.

Brownfield: An area of land that has previously been used for residential, industrial or commercial purposes.

Built environment: The structures and places in which we live, work and play, all of which are integral to improving the health, wellbeing and quality of life of our community as a whole.

Built form: Relates to the buildings, associated structures and surrounding public spaces.

Capital works: The provision of site infrastructure associated with and integral to a development, such as a new electrical sub-station, new water main, new road, bridge or main sewer line.

Carbon neutral city: A carbon neutral city or activity emits no net greenhouse gases. This can be achieved by reducing carbon emissions from city-related activities and/or by offsetting emissions with changes in activities unrelated to the city.

Character: Character makes an area distinctive and contributes to the identity of the place.

City Centre: Characterised by an established commercial core with a full range of services, taller buildings and a network of retail and commercial streets with active frontages. It serves as the primary centre for local government, commerce and entertainment, while providing opportunities for office development and residential intensification. Town centres provide the main commercial and community focus for the district populations (that is, Belconnen, Gungahlin, Tuggeranong and Woden/Weston Creek).

Climate change adaptation: Actions taken to help communities and ecosystems adjust to changing climate conditions and their effects.

Climate change mitigation: The reduction of greenhouse gas emissions to achieve stabilisation of greenhouse gas concentrations in the atmosphere and subsequently a cessation of further warming.

Collector roads: These roads collect and distribute traffic within residential, industrial and commercial areas.

Design principles: A set of design ideas that enable the consistent consideration of a range of design-related issues including at a broader city, neighbourhood or site-specific scale.

Desired outcome: A statement describing the intent of planning provisions and the planning policy outcomes intended to be achieved.

Development application (DA): A formal application, including supporting documents, lodged with the planning and land authority to enable an assessment of a proposed development against the requirements of the Territory Plan and the Planning Act.

Development assessment: The processes through which development applications are assessed and considered. They are either approved, refused or required to resubmit with further detail.

District planning: Planning at a district level to bridge the gap between ACT-wide and local area planning to provide an opportunity to build on existing and emerging government policies, plans and strategies.

Ecosystem: A dynamic combination of plant, animal and microorganism community and their non-living environment (e.g. soil, water and the climatic regime) interacting as a functional unit.

Employment land: Land that is zoned in the Territory Plan for commercial and industrial purposes.

Fine grain: Smaller scale development which stimulates the street level experience of places through the articulation of activities, design and materials.

Future-proof: The process of anticipating the future and developing methods of minimising the effects of shocks and stresses of future events.

Greenfield: Undeveloped land often located on the edge of existing urban areas. Greenfield development requires full assessment of environmental, infrastructure and planning issues to determine future use and suitability for expansion of the city. Typically, this will involve an additional process of applying for a subdivision design application before submission of a subdivision development application for a new estate.

Greenhouse gas emissions: Any of the gases whose absorption of solar radiation is responsible for the greenhouse effect including carbon dioxide, methane, nitrous oxide and the fluorocarbons.

Gross floor area (GFA): The sum of the area of all floors of the building, measured from the external faces of the exterior walls.

Group centre: Centres that service several nearby suburbs and provide easy access to major services, retailing and other commercial and community uses that meet the weekly needs of its catchment population.

Guidelines: Documents that provide guidance on how to implement official advice but do not include specific development controls.

Housing diversity: A range of housing types to choose from; for example, single dwellings, town houses and apartments.

Human scale: Reflects a sympathetic proportional relationship between the built form and human dimensions where people are not overwhelmed by the built form. Human scale contributes to a person's perception of buildings or other features in the public domain. It is typically referred to when discussing the bulk and scale of development.

Indicative land release program (ILRP): An annual program that sets out the Government's intended land releases for sale over four years of residential, mixed-use, commercial, industrial, community and non-urban land. It also contributes to the financial, social and environmental objectives of the Territory i.e. affordable housing, green space and government revenue.

Industry: The use of land for the principal purpose of manufacturing, assembling, altering, repairing, renovating, ornamenting, finishing, cleaning, washing, winning of minerals, dismantling, processing, or adapting of any goods or any articles.

Infill: Development of unused or underutilised land in existing urban areas. It involves increasing the capacity of our existing urban area to support growth.

Innovation precinct: A group of industry, research and education activities within an area.

Knowledge industries: Are based on knowledge-intensive activities that contribute to an accelerated pace of technical and scientific advancement. They have a greater reliance on intellectual capabilities than on physical inputs or natural resources.

Land capability: Use of land according to its capacity to sustain such use, without long-term degradation.

Land use: The way in which a piece of land is used which includes the activities that are undertaken on it such as residential, industrial, community facility, recreational and commercial.

Land use zones: Are allocated by the Territory Plan to all Territory land within the ACT. They define what land uses can or cannot occur on a piece of land.

Last kilometre: Term used in supply chain management to refer to the last leg of a journey to move people or goods to a final destination.

Liveability: This is a measure of city resident's quality of life and is used to benchmark cities around the world. It includes socioeconomic, environmental, transport and recreational measures.

Living infrastructure: Refers to all the interconnected ecosystems within an urban catchment, including the 'green infrastructure' of trees, gardens, green walls and roofs, parks, reserves and open spaces, and the 'blue infrastructure' of our waterbodies including lakes, wetlands and waterways.

Local centre: Smaller shopping centres that provide convenience retailing and community and business services that meet the daily needs of the local population.

Location quotient: A measure of relative industry specialisation of a local economy compared to a larger area.

Micro-mobility: For of transport using methods such as e-scooters and e-bikes.

Missing middle housing: Can be defined in many ways, primarily referring to low rise medium-density housing types that fall in-between smaller apartments and larger freestanding homes. Missing middle housing includes duplexes (two attached or semi-attached dwellings), townhouses (dwellings in a multi-unit complex), terrace houses (dwellings built in a continuous row), dual occupancies (two dwellings on one block of land), and manor homes (comprise 3-4 small low-rise dwellings).

Mixed-use: An umbrella term that means a block that requires development for residential and one or more commercial uses.

Mixed-use development: Involves a mix of complementary land uses, such as residential, small offices or convenience stores. This can include horizontal and vertical mixes.

Multimodal: Many different types of transport within a network, including walking, bikes, e-scooters, cars, buses, light rail, heavy rail, freight and others.

Multi-unit housing: The use of land for more than one dwelling and includes, but is not limited to, dual occupancy housing.

Natural resources: These resources include soil, water and marine resources; geological features and landscapes; native vegetation; native animals and other native organisms; and ecosystems.

Non-single residential: Relating to a Crown Lease for block types commonly referred to as commercial, industrial, englobo, multi-unit, mixed use and/or community.

Orbital roads: Roads that travel around the outside of an urban area.

Outcomes-focussed planning: A system that focuses on the substantive matters to be addressed without specifying in detail how that will be achieved. It is one that is centred on the quality, results and performance of planning system outcomes, rather than rule compliance.

Overlays: Territory Plan overlays are a set of planning instructions that apply to areas which have

Place making: A multi-faceted approach to the planning, design and management of public spaces. Place making encourages broad community and business involvement in the design, experience, place management and progressive enhancement of the public realm through engagement and participation.

Planning: Also called urban or regional planning, is the process of making decisions to guide future action and is specifically concerned with shaping cities, towns and regions by managing development, infrastructure and services to improve social, economic and environmental outcomes.

Planning Act 2023 (the Act): The legislation which provides the framework for the ACT planning system.

Policy outcome: The planning or policy outcome subsequent provisions of the Territory Plan are endeavouring to achieve.

Public domain: Refers to spaces that belong to or are available to the public, including parks, streets and other public spaces such as plazas, courtyards and open spaces.

Residential redevelopment: Development that involves:

- substantial or total demolition of an existing dwelling on land previously used for residential purposes and replacement with one or more new dwellings
- establishment of one or more new dwellings on land previously used for residential purposes in addition to an existing dwelling
- substantial alterations to an existing dwelling that would result in a significant change to the scale and/or character of the dwelling.

Resilience: The capacity of individuals, communities, businesses and systems in a region to survive, adapt and thrive, no matter what chronic stresses and acute shocks they experience.

Section: An area of land comprising of a logical grouping of individual blocks identified as a Section pursuant to the [Districts Act 2002](#).

Setback: Distance between block boundary and the outside face of a building or structure.

Shared-use path: A path that is restricted to non-motorised transport, with the exception of motorised wheelchairs and power assisted pedal cycles. Both pedestrians and cyclists share these paths.

Shared zone (or shared spaces): A road or place where the road space is shared safely by vehicles, cyclists and pedestrians. A shared zone may include the removal of traffic lights, pedestrian barriers, road markings and kerbs to give equal priority to all users and require negotiation between users.

Single dwelling housing: The use of land for residential purposes for a single dwelling only.

Site: A block, lease or other lawful occupation of land, or adjoining blocks, leases or lawful occupancies in the event of these being used for a single undertaking or operation, but excludes the area of any access driveway or right-of-way.

Social infrastructure: Encompasses all the facilities, services and networks that help families, groups and communities to meet their social, health, education, cultural and community needs.

Solar access: The ability of a building or public space to receive sunlight without obstruction from other buildings.

Spatial planning: Planning that places a greater emphasis on strategic planning and physical direction of the Territory at different scales, from the city level to the local-area and site levels of planning, as well as improved planning and built form outcomes.

Spatial context: Of a site is where something is located within an area of a city.

Stakeholder: Any person, institution, organisation, agency, department, authority, club, association or the like which is directly involved in the planning process.

Strategic planning: The long-term strategic or policy objectives that describe the purpose and direction of the planning system.

Suburbs: Small residential communities located on the periphery of a city centre. Suburbs close to the city centre typically consist of medium to high-density dwellings, with suburbs on the outskirts of the city typically consisting of medium to low-density dwellings. Suburbs are usually serviced by a local or group centre.

Sustainable development: Forms of development that meet the needs of the present without compromising the ability of future generations to meet their needs.

Surveillance (or passive surveillance): The 'eyes on the street' from residents and people going about their daily activities to create a sense of safety on streets and public spaces.

Town centre: A town centre offers a wide range of facilities and services to serve the community and visitors from the surrounding district. Typically, a town centre offers employment opportunities and provides higher order retail facilities, offices and consulting rooms; cultural, community and public administration; entertainment, educational, religious and residential facilities. Generally, most urban districts in the ACT have a town centre providing access to goods and services bought less frequently.

Territory Plan: The key statutory planning document in the ACT. It is a statutory document that guides planning and development in the ACT to provide the people of the ACT with an attractive, safe and efficient environment in which to live, work and play. The Territory plan is used to:

- to manage development, in particular land use and the built environment
- to assess development applications
- to guide the development of new estate areas (future urban land) and the management of public land.

The Territory Plan contains:

- a statement of strategic directions
- a map, including zones and overlays
- Policy outcomes and land use tables of assessable developments for each zone
- a range of controls including Assessment requirements, assessment outcomes and development compliance provisions.
- The Territory Plan also relies upon a range of supporting documents including Design Guides and Technical Specifications to assist in applying some of the Territory Plan provisions. Supporting documents are to be made available on the Authority's website.

Transit corridors: Transit corridors are generally linear in form and are designed for mass transport. Transit corridors offer one or more modes of transport, such as car lanes, cycle lanes, bus lanes, light rail and footpaths. Development often occurs along transit corridors due to the ease of transport. Northbourne Avenue is an example of a transit corridor

Typology: Refers to housing or building typologies, which are sets of buildings that are similar in their function or building form – for example, low-density housing is one example of a typology that would be characterised by 1-2 storey single dwellings.

Transit-oriented development: The creation of compact, walkable communities located around high-quality public transit systems.

Unit title: A type of property ownership where home owners own a defined part of a building such as an apartment, generally known as a unit. They also have shared ownership, as tenants in common, of common areas such as lifts, lobbies or driveways. These areas are known as common property. Each unit may also have additional land or building called unit subsidiaries, such as car spaces and balconies.

Urban density: The number of people living in an area of a city or part of a city.

Urban design: The collaborative and multi-disciplinary process of shaping the physical setting for life in cities and towns. It involves the design of buildings, groups of buildings, spaces and landscapes, and the establishment of frameworks and processes that facilitate successful development.

Urban footprint: The geographic extent of the existing urban area.

Urban grain: The street pattern, size and distribution of blocks, scale of buildings and their relationship to each other. Urban grain includes the hierarchy of street, the pedestrian connections, public places and linkages to public transport

Urban infill: Development of unused or underutilised land in existing urban areas. It involves increasing the capacity of our existing urban area to support growth.

Urban intensification areas: Targeted areas where development and redevelopment are directed and aligned with supporting infrastructure and provide the opportunity for renewal and investment.

Urban renewal: This is the process of improving the economic, social and environmental sustainability of a particular urban area through redevelopment of underutilised urban areas. It typically involves urban redesign, infrastructure renewal and investment, and identifying precincts and land for mixed use.

Urban improvement: This means improving streets and public domain with more connections and greenery to encourage walking and enhance local liveability.

Urban services: A collection of industries that enable the city to develop and its businesses and residents to operate. These industries are often in industrial and employment zones and have land use, floorspace, operational and accessibility requirements that mean they need to locate in special areas and away from non-compatible uses – such as utilities providers, mechanics, and light manufacturing uses.

Urban transect: A line or section through a city representing changes in types of urban environments, generally most compact and dense in the city centre and stepping down in height, built form and density to the urban fringe.

Water sensitive urban design (WSUD): Is the planning, design or construction of the built environment to minimise water runoff and make sure any runoff causes the least amount of damage. It is also about wise use of that water to improve our urban environment.
