the ACT engagement
website, housing project
information, Q&A board,
workshop dates and
registration forms, and
interactive survey

Co-Design Phase Engagement

Snapshot

WHAT WE HAVE LEARNT FROM THE COMMUNITY

Considering all engagement together, the following have been identified as 'Highly Desirable'

Comfortable community gathering space with social furniture, power, wifi, water, shared food, shade and protection from wind

Temporary community activities and events for all ages that are free. E.g. outdoor movies, buskers, exhibitions, concerts, and holiday activities

A multi-use cultural and performance space, with strong natural elements if outdoors

Performances (including multiple ages)

First Nations Performance

Visible, tangible connection to water on the site - ideally a water feature informed by Ngunnawal people. This might be something like a water wall running into a creek.

Cafe/restaurant/bar with alfresco along street

Large Ngunnawal sculpture

The following have been identified as 'Desirable'

Cafe opening onto park/public space

Natural area with native plantings, natural shade, curved paths and some privacy

Well connected, comfortable, accessible and walkable spaces

Evening activity

Green buildings with biophilic design elements

Building interfaces with lots of greenery and limited concrete

High levels of safety, particularly at night, with both safety and ambient lighting, good passive surveillance, and visibility in, throughout and from public areas

Bilingual signs, and places that are names in Ngunnawal language

Spaces that immerse you in nature - greenery and native flora that attracts native fauna to provide spiritual connection to the land

Considering all engagement together, the following have been identified as 'Undesirable'

Traditional water play for young children

Hardware Supplier

Building interfaces with lots of concrete, and lack of greenery

Discount Supermarket

Nature play - big mud pit
